MEDIA RELEASE

Edgar Filing: SERONO S A - Form 6-K

FOR IMMEDIATE RELEASE

SERONO AND PARATEK PHARMACEUTICALS IN PARTNERSHIP TO DEVELOP A NOVEL ORAL TREATMENT FOR MULTIPLE SCLEROSIS

GENEVA, SWITZERLAND AND BOSTON, USA - OCTOBER 27, 2004 -

Serono (virt-x: SEO and NYSE: SRA) and Paratek Pharmaceuticals, Inc. announced today that they have entered into an agreement to discover, develop and commercialize an orally-available disease modifying treatment for multiple sclerosis (MS).

During the initial phase of their collaboration, Paratek and Serono will seek to identify for clinical development novel tetracycline derivatives from a library of non-antibiotic lead compounds discovered by Paratek chemists. Orally administered minocycline (an antibiotic tetracycline) was reported in a recently published clinical study to have a therapeutic benefit in the treatment of patients with relapsing-remitting MS(1). The favorable safety profile of the tetracycline class is well documented, with a more than 30-year track record in the marketplace. Serono will be responsible for the worldwide development and commercialization of compounds arising from the collaboration. No orally administered disease-modifying drug is currently approved for the treatment of MS.

"This partnership with Paratek reflects our long-term commitment to patients with multiple sclerosis", said Tim Wells, Head of Research of Serono. "Non-antibiotic tetracycline-derived compounds represent a promising approach for the development of orally available treatments for multiple sclerosis. We are very pleased to be working with Paratek, which has considerable expertise in this area and has already identified a number of very promising compounds."

"Serono's commitment to multiple sclerosis and their extensive research expertise in the fields of neurology, immunology and inflammation were very attractive to Paratek. This collaboration validates the use of our proprietary tetracycline chemistry expertise to create improved novel compounds specifically targeting promising new uses," said Thomas J. Bigger, President and CEO of Paratek Pharmaceuticals.

1/3

Under the terms of the agreement, Paratek will receive an initial cash payment, a loan convertible into Paratek stock, research funding and potential milestone payments related to development progress and regulatory milestones. In addition to upfront consideration, Paratek would receive USD 38 million in milestone payments from Serono for the first product to be successfully developed and registered in MS. Additional drugs and indications developed would result in further payments to Paratek. Paratek will receive undisclosed royalties on product sales should a product reach the market.

Preclinical data on three non-antibacterial tetracycline derivatives covered by this agreement will be presented today at Neuroscience 2004, the Society for Neuroscience's 34th Annual Meeting in San Diego.

ABOUT MULTIPLE SCLEROSIS

Multiple sclerosis is a chronic, inflammatory condition of the nervous system and is the most common, non-traumatic, neurological disease in young adults. Multiple sclerosis may affect approximately two million people worldwide. While symptoms can vary, the most common symptoms of multiple sclerosis include blurred vision, numbness or tingling in the limbs and problems with strength and coordination. The relapsing forms of multiple sclerosis are the most common.

Serono forward-looking statements

Some of the statements in this press release are forward looking. Such statements are inherently subject to known and unknown risks, uncertainties and other factors that may cause actual results, performance or achievements of Serono and affiliates to be materially different from those expected or anticipated in the forward-looking statements. Forward-looking statements are based on Serono's current expectations and assumptions, which may be affected by a number of factors, including those discussed in this press release and more fully described in Serono's Annual Report on Form 20-F filed with the U.S. Securities and Exchange Commission on March 25, 2004. These factors include any failure or delay in Serono's ability to develop new products, any failure to receive anticipated regulatory approvals, any problems in commercializing current products as a result of competition or other factors, our ability to obtain reimbursement coverage for our products, and government regulations limiting our ability to sell our products. Serono has no responsibility to update the forward-looking statements contained in this press release to reflect events or circumstances occurring after the date of this press release.

ABOUT SERONO

SERONO is a global biotechnology leader. The Company has eight biotechnology products, Rebif(R) , Gonal-F(R) , Luveris(R) , Ovidrel(R) /Ovitrelle(R) , Serostim(R) , Saizen(R), Zorbtive(TM) and Raptiva(R). In addition to being the world leader in reproductive health, Serono has strong market positions in neurology, metabolism and growth and has recently entered the psoriasis area. The Company's research programs are focused on growing these businesses and on establishing new therapeutic areas. Currently, there are approximately 30 ongoing development projects.

In 2003, Serono achieved worldwide revenues of US\$2,018.6 million, and a net income of US\$390.0 million, making it the third largest biotech company in the world. Its products are sold in over 90 countries. Bearer shares of Serono S.A., the holding company, are traded on the virt-x (SEO) and its American Depositary Shares are traded on the New York Stock Exchange (SRA).

ABOUT PARATEK PHARMACEUTICALS

Edgar Filing: SERONO S A - Form 6-K

PARATEK PHARMACEUTICALS, INC. is engaged in the discovery and commercialization of new therapeutics that treat serious and life-threatening diseases, with a particular focus on the growing worldwide problem of antibiotic resistance. Paratek's lead programs are advancing novel compounds that can circumvent or block bacterial resistance, as well as drugs that can prevent infection by interfering with Multiple Adaptational Response (MAR) mechanisms in bacteria. Out of these efforts, Paratek has discovered a new class of antibiotics, the aminomethylcyclines that target the need for new and potent antibacterials to overcome the problem of rapidly growing bacterial resistance. The Company's lead antibiotic clinical candidate, BAY 73-7388, the first product from this class, is being developed in a collaborative partnership with Bayer HealthCare AG for the treatment of serious infections.

Outside the antibacterial therapeutic area, Paratek has also established an internal effort to exploit its novel families of compounds and their unique mechanism of action in selected anti-inflammatory and neurodegenerative conditions. Paratek has an active chemical synthesis effort to produce novel and diverse small molecules, with the goal of developing non-antibacterial products with improved activity in serious diseases based upon a growing body of clinical and basic research supporting this approach.

Paratek is privately held and headquartered in Boston, Massachusetts, USA. For more information, visit Paratek's website at www.paratekpharm.com.
