The exact stock prices and effective dates may not be set forth in the table above, in which case:

- if the stock price is between two stock prices in the table or the effective date is between two effective dates in the table, the number of additional shares will be determined by a straight-line interpolation between the number of additional shares set forth for the higher and lower stock prices and the earlier and later effective dates, as applicable, based on a 365-day year;
- if the stock price is greater than \$37.50 per share (subject to adjustment in the same manner as the stock prices set forth in the column headings of the table above), no additional shares will be added to the conversion rate; or
- if the stock price is less than \$25.58 per share (subject to adjustment in the same manner as the stock prices set forth in the column headings of the table above), no additional shares will be added to the conversion rate.

Notwithstanding the foregoing, in no event will the conversion rate be increased on account of a make-whole fundamental change to exceed 39.0930 shares of our common stock per \$1,000 principal amount of Notes, subject to adjustments in the same manner as the conversion rate is required to be adjusted as set forth under Description of the Notes Conversion Rights Conversion Rate Adjustments in the Preliminary Prospectus Supplement.

(2) Includes the aggregate principal amount of the Notes offered hereby. As prescribed by Financial Accounting Standards Board guidance, Accounting Standards Codification 470-20, the feature that allows the holder to convert the Notes into shares of our common stock will be reflected on our balance sheet in stockholders' equity and is measured as the difference between the proceeds received and the fair value of a similar liability that does not have a conversion feature. (4) The difference between the proceeds received and the fair value of a similar liability that does not have a conversion feature will be reported as an increase to additional paid-in capital.

(5) The September 30, 2012 pro forma combined balance sheet included in the Form 8-K filed by Starwood on February 11, 2013 assumes an equity issuance of \$579 million to finance a portion of the purchase price. Alternatively, the additional financing sources may include a combination of new debt or equity securities and/or borrowings under existing credit facilities, asset sales, and cash on hand dependent on a number of factors, including the market conditions at closing, strategic alternatives, and Starwood's liquidity position and outlook.
