In the Announcement, Cameco provided information on the operating highlights for Bruce Power (100%), together with a commentary on the third quarter, year to date and outlook, which are as follows:

Notes

1. These figures were prepared under Canadian GAAP and on a calendar year basis and therefore will differ from those to be presented by British Energy.
2. 4 1/2 months being the period since the financial close of the acquisition of the Bruce lease on 11 May 2001.
3. Capacity factor for any given period represents the amount of electricity actually produced for sale as a percentage of the amount of electricity the plants are capable of producing for sale.

Third Quarter

Edgar Filing: BRITISH ENERGY PLC - Form 6-K

In the quarter, 5.5 terawatt hours of electricity was generated by the Bruce 'B' reactors at a capacity factor of 79%. Planned maintenance work on one reactor, which began in the first quarter, was completed during the third quarter. Planned maintenance on a second reactor began during the quarter and will continue into the fourth quarter when it is expected to return to service. Cameco's share of earnings before taxes for the quarter was \$11 million compared to \$13 million for the period ended 30 September 2001. Note that the comparative data from 2001 is for a 4 1/2 month period.

Year-to-date

To date, power generation of 15.6 terawatt hours has been achieved by the Bruce 'B' reactors at a capacity factor of 75%. As a result, Cameco recorded earnings before taxes of \$8 million.

Outlook

Electricity Business

2002 has been a year of extensive planned maintenance programs to prepare the reactor fleet for more efficient service over the longer term. With the return to service of one of the four Bruce 'B' reactors late in the fourth quarter, following its planned maintenance outage, all four 'B' reactors are expected to be in operation for the start of the new year.

The Bruce 'B' reactors continue to perform safely and efficiently. For 2002, an average capacity factor of 76% is expected. Cameco estimates the 2002 earnings contribution from Bruce Power to be similar to its 2001 contribution before tax of \$12 million.

Good progress continues on the restart program for the two Bruce 'A' units. About \$286 million of the total project costs, estimated at about \$400 million, have been spent to date.

Following completion of the reactor refurbishment and restart programs, the long term sustainable capacity factor for the Bruce Reactors is expected to be about 90%. Beginning in 2003, Bruce Power is expected to contribute significantly to Cameco's earnings and cash flow provided that the uncertainty surrounding BE's financial difficulties is favourably resolved.
