Table of Contents

2007 was one of the most exciting years in CSI's history. With the acquisition of McAleer Computer Associates, Inc. and our 93% increase in revenue over 2006, it was truly a year of many accomplishments. In 2008, CSI will remain dedicated to meeting our clients' growing technology needs and will focus our efforts on achieving continued financial growth. - Nancy Hedrick, CEO

CSI is proud to join both our clients and partners in helping to improve our educational system through the use of interactive technology in the classroom. The use of interactive whiteboards, wireless tablets, student voting devices and other interactive technologies is changing the face of education and creating learning environments with endless creative possibilities. CSI is dedicated to offering these solutions to as many school districts as possible as they continue to grow with technology.

On January 2, 2007, CSI finalized the acquisition of McAleer Computer Associates, Inc. (McAleer). The addition of the Mobile, AL operations has proven beneficial throughout 2007; and resulted in increased software sales and expansion of CSI's geographic area.

Table of Contents**Letter to Shareholders**

Dear CSI Shareholder,

We experienced record-breaking results for our 2007 year. During this time period, we focused our efforts on both organic and acquisition opportunities for growth. I am very pleased to report that we succeeded with these endeavors and delivered substantial gains in both revenues and profitability. I would like to thank each member of our CSI Outfitters team for their efforts delivering such positive results.

Our revenues increased by \$26.6 million or 93.3% to \$55.2 million.

Gross profit was approximately \$11.3 million, an increase of \$4.9 million or 77.6% over 2006.

Net income reached \$1.7 million or earnings of \$0.46 per basic share and \$0.14 per diluted share in 2007.

In 2007 we effectively executed our business strategy to expand our geographic and customer footprint and achieved economies of scale. We completed an acquisition, growing our customer base, revenues and profitability. We continued to put strategies in place to contain compliance costs, streamline our reporting procedures and effectively communicate with investors. We believe the Company is positioned to continue our growth in 2008 with additional penetration in our target markets.

We achieved many successes during 2007:

We acquired McAleer Computer Associates, Inc on January 2, 2007. This was a significant step in our acquisition growth strategy which focuses on acquiring profitable software companies in order to add higher margin sales and recurring revenue to our revenue mix. This acquisition (based in Mobile, AL) increased our footprint to eight Southeastern states and has provided significant cross sell opportunities for our software solutions into these states as we market to the local government sector. In early 2008 we have also begun cross selling our technology solutions into this expanded footprint.

Our software applications segment increased sales by 109% in 2007 over 2006. This increase was fueled by both organic growth and acquisition growth from the addition of McAleer Computer Associates. The organic growth was 20% while the acquisition growth was 89%. While the acquisition expanded our footprint into five additional states, we also began selling to local governments in Alabama,

Computer Software Innovations, Inc. (OTCBB:CSWI) is a full service company providing software and technology solutions primarily to public sector organizations. The software solutions include financial management, billing and revenue management, school activity accounting, lesson planning and automated workflow. The technology solutions include IP telephony, IP video surveillance, visual communications, interactive classrooms, network security and traffic monitoring, infrastructure design, wireless solutions, network management, engineering services and hardware solutions. CSI's client base includes school districts, higher education, municipalities, county governments, and other non-profit organizations. Currently, more than 600 public sector organizations utilize CSI's software systems and network integration services. Additional information on CSI can be obtained through its website at www.csioutfitters.com.

Letter to Shareholders (cont.)

Mississippi and Louisiana in 2007. In the latter part of 2007 we began development of several add-on products for our various financial management solutions, targeted to increase revenues within our existing client base coupled with a rapid development cycle. These products include online bill pay, employee self-service and imbedded print solutions. Several have been completed and installation of these products is underway in Q1 of 2008.

SmartFusion[®], the .Net/SQL version of our financial management software, was released in early 2007 to selected accounts. The solution has been extremely well received and upgrades will continue in 2008.

Our technology solutions segment experienced a phenomenal year with sales increasing by \$21.1 million or 90% and gross profit increasing by \$7.0 million or 88%. As anticipated at the start of 2007, the Connected Classroom solutions (interactive whiteboards, projections, audio augmentation, and associated services) contributed significantly to the growth of this segment of our business, making up 51% of total revenues and 63% of technology revenues. In 2007 we sold approximately 10,500 Promethean ActivBoards, an increase of 7,800 over 2006. One of our larger sales during 2007 involved a district implementing the interactive classroom technology in every classroom, district-wide; totaling more than 1,000 classrooms. In addition to the whiteboards, this implementation included laptops for every teacher. It is exciting to be involved with technologies proven to have a positive impact on education and learning.

As a result of the tremendous efforts and hard work by everyone on our team, we completed many objectives in 2007 which will have a positive impact on our progress in 2008. These include the following:

Within both our software and technology segments, we continued our emphasis on higher margin solutions.

The McAleer acquisition, our development of additional proprietary applications and the recurring revenue generated by our software service contracts allowed us to maintain strong margins in the software segment.

We continued to bundle engineering services, project management and technology service contracts with our technology solutions to maintain the margins for our technology segment.

We continued our focus on containing compliance costs and adapting to the reporting requirements of being a public company. We improved our processes through the Sarbanes-Oxley implementation, thus creating greater efficiencies within our systems.

While our salespersons' heavy cross-selling experience in 2006 allowed us to better assess our salespersons' skill toward the selling of software applications or technology solutions and honed our internal understanding of business drivers for each area, the realignment of our sales personnel by segment at the start of 2007 proved to be very effective. By allowing the sales personnel to focus on one primary segment of the business (either software or technology), we were able to pursue more opportunities successfully in both segments of the business. This model will remain in place in 2008 and for the foreseeable future.

Table of Contents

Letter to Shareholders (cont.)

For 2008:

We anticipate that sales and services related to the Connected Classroom will continue to contribute significantly to our revenue and profitability. In addition to offering these solutions in North and South Carolina, we have now entered into an affiliate arrangement to sell interactive classroom solutions in several counties in Alabama. These offerings are integral to continuing our focus on the education market. We continue to expand our other technology offerings, which include IP telephony, network integration services, network security, server/workstation/laptop installations, and wireless technologies.

We have also recently expanded our technology solutions into the Alabama market. We have strong relationships in place through the business officials who utilize our financial management software in Alabama and will now expand those relationships to include the instructional and IT staff of those school districts. In recent years we have built our technology presence in South Carolina in this same way.

Our software segment will continue to expand our footprint and market penetration through the sales of our current financial management products (CSI Accounting +Plus and NextGen) along with the new version of our product, SmartFusion®. We will continue development of our add-on solutions (online bill pay, employee self service and imbedded print solutions) to provide opportunities to sell back into our existing client base.

On April 1, 2008, we completed the acquisition of ICS Systems, Inc. (ICS) based in Greensboro, North Carolina. ICS has a successful 25-year history in financial management, including fund accounting and billing software, hardware, and consultation. This acquisition provides CSI strategic advantages, with valuable market experience and increased penetration in the local government market space. We are very excited about the opportunities that the acquisition of ICS will provide. Given ICS' s solid customer base and annual revenues of more than one million dollars, we believe that this acquisition will support our acquisition strategy and positively impact our operations in 2008 and beyond.

Our search for additional acquisitions will continue during 2008, particularly those that will enhance our intellectual property portfolio. We are also actively pursuing companies that will allow us to increase our market penetration, add higher margin sales, and increase our recurring revenue.

The record performance we achieved in 2007 is the result of increased demand for the interactive classrooms in our markets, coupled with organic software revenue growth and the addition of McAleer. We anticipate continued demand for our technology products and service solutions as we proceed into 2008. Additionally, the McAleer acquisition continues to contribute significantly to the software applications segment of our business, where we expect continued organic growth as well as cross-selling opportunities within the expanded territory.

We enter 2008 with a positive outlook. Our efforts will remain focused on increasing revenues, improving gross margins and earnings, and providing value to our shareholders. We look to capitalize on the strong demand for our technology and software solutions through deeper penetration into our existing client base, taking advantage of cross selling opportunities in the newly acquired footprint, and expansion into new geographic regions.

I want to thank all of our employees, shareholders, Board of Directors, and customers for their continued support and commitment. I look forward to sharing news with you during the remainder of 2008.

Nancy Hedrick
Chief Executive Officer and President

Table of Contents

Software Applications

1. Finance Management

Our fund accounting and human resource software applications are designed specifically for the public sector. School districts, municipalities, county governments, public libraries, and non-profit organizations utilize our award-winning software.

2. Municipal Billing

Our municipal billing system prepares bills and allows collections to be recorded for utilities, taxes, business licenses and construction permits.

3. School Activities Accounting

School activity funds may be tracked with CSI's EntryPoint Fund Ledger, Accounts Payable, Cash Collections, and Bank Reconciliation modules.

4. Automated Workflow Solutions

Forms may be electronically routed for approval and documents may be scanned, imaged and archived as well as printed, e-mailed or faxed through our automated workflow solutions.

5. Lesson Planning

Our Curriculator® software is a standards based lesson planning system that allows education professionals to create, monitor and document lesson plans and their compliance with state curriculum standards.

Technology Solutions

6. Infrastructure Design

Determining the optimum network infrastructure is a key component when designing an organization's IT systems.

7. Engineering Services

Successful installation and implementation of the various technology solutions is a critical component when offering the total technology solution.

8. Hardware Solutions

Computers, printers, networking products, storage and specialty devices are all part of the hardware solutions we offer.

Table of Contents

Technology Solutions (Cont d)

9. Wireless Solutions

Establishing a local area network that allows mobile users to utilize wireless radio waves to provide network connectivity in a surrounding area is another of our technology solutions.

10. Network Management

Today's networks are very complex and providing assistance in the management of an organization's networks has become a key offering of our technology solutions segment.

11. IP Telephony

We deliver phone services over an organization's existing network infrastructure by using IP (Internet Protocol).

12. IP Video Surveillance

We provide access to video surveillance using IP (Internet Protocol), allowing anytime/anywhere access to an organization's surveillance system.

13. Visual Communications

Video conferencing, administrative communications, home bound learning and professional development may all be provided through visual communications.

14. Network Security/Traffic Monitoring

Spyware protection, content filtering, email security, spam protection, firewall security and traffic monitoring are all components we offer in this ever-growing technology area.

15. Interactive Classroom

We are transforming today's classroom into an interactive learning environment through the use of interactive whiteboards, projectors, wireless tablets and student voting devices.

PART I

Item 1. Business.

A. Introduction

Unless the context requires otherwise, (1) Computer Software Innovations, Inc., CSI, we, our, us and the Company refer to the combined business of Computer Software Innovations, Inc., a Delaware corporation, and its subsidiary, CSI Technology Resources, Inc., a South Carolina corporation; (2) VerticalBuyer refers to the Company prior to our 2005 merger; and (3) CSI South Carolina refers to Computer Software Innovations, Inc., a South Carolina corporation, prior to the 2005 merger.

We develop software and provide hardware-based technology solutions. Our internally developed software consists of fund accounting based financial management software and standards-based lesson planning software. Our primary software product, fund accounting based financial management software, is developed for those entities that track expenditures and investments by fund, or by source and purpose of the funding. Our fund accounting software is used primarily by public sector and not-for-profit entities. In September 2005, we acquired standards-based lesson planning software. The software is designed to allow teachers to create lesson plans that are tied to a state's curriculum standards. These lesson plans may be reviewed by administrators and a report generated to determine the standards that have been met or need to be met. Results of operations related to our software-based solutions are reported through our Software applications segment. We also provide a wide range of technology solutions, including hardware and design, engineering, installation, training and ongoing support and maintenance. Our solutions include computers, networking, security, IP telephony and distance learning and video communication. Results of operations related to our technology-based solutions are reported through our Technology solutions segment.

Our operations are those of our predecessor, Computer Software Innovations, Inc., a South Carolina corporation organized in 1990. The history and development of CSI South Carolina is described in C. History and Development of CSI South Carolina. Our current business operations are described in B. Overview and elsewhere in this Item 1. Business.

Prior to February 10, 2005, the Company was known as VerticalBuyer, Inc. Prior to our merger with CSI South Carolina on February 11, 2005, we were a public shell corporation, having conducted no business operations since September 2001.

In the first quarter of 2005, we concluded a series of recapitalization transactions. On January 31, 2005, a change in control of the Company occurred as a result of the purchase of a majority of our common stock by CSI South Carolina. On February 11, 2005, CSI South Carolina merged into us, and we issued preferred stock, common stock, warrants and certain subordinated notes. In connection with the merger, we changed our name to Computer Software Innovations, Inc.

The merger of CSI South Carolina into us was accounted for as a reverse acquisition, with CSI South Carolina being designated for accounting purposes as the acquirer, and the surviving corporation, VerticalBuyer, Inc., being designated for accounting purposes as the acquiree. Under reverse acquisition accounting, the financial statements of the surviving corporation (VerticalBuyer) are the financial statements of the acquirer (CSI South Carolina). The activities of VerticalBuyer are included only from the date of the transaction forward. Shareholders' equity of CSI-South Carolina, after giving effect for differences in par value, has been carried forward after the acquisition.

The merger and related transactions are described in E. The Merger and Recapitalization.

In accordance with our business strategy, on January 2, 2007, we purchased substantially all of the assets and business operations of McAleer Computer Associates, Inc. (McAleer). The total purchase price for the assets acquired was \$4,050,000. Details on the acquisition are described in I. McAleer Acquisition. McAleer, an Alabama corporation based in Mobile, Alabama, is primarily a provider of financial management software to the K-12 education market. It has been in operation for over twenty-five years. The acquisition of McAleer strengthened CSI's current operations with the addition of an office in Mobile, Alabama, from which CSI will be able to deliver expanded software, technology and service offerings to a broader geographic area and the local government (city and county) markets. The addition of McAleer brings on more than 160 additional fund accounting customers in the K-12 education sector, with a geographic presence in five states not previously served by CSI: Alabama, Mississippi, Louisiana, Tennessee and Florida. Like CSI, McAleer also has customers in Georgia and South Carolina. In contrast to CSI, McAleer has not historically focused on the local government market or provided as broad a range of technology solutions. CSI has the opportunity to increase sales to those specific markets and the new regions that McAleer serves.

The products and services previously offered by McAleer are now products and services of CSI. However, in order to differentiate, we refer to the products and services offered by McAleer prior to the acquisition, and from which continued service and support is offered from the Mobile,

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Alabama office subsequent to the acquisition, as McAleer or CSI Mobile products and services. Software applications segment related operations and services offered from CSI prior to the acquisition of McAleer, both before and continuing

Table of Contents

after the acquisition, are referred to as CSI-Easley operations. All other products and services of CSI referred to are those offered by CSI prior to the acquisition of McAleer, and for which CSI continues to provide the development, support and services primarily out of its Easley, South Carolina headquarters.

Our principal executive offices are located at 900 East Main Street, Suite T, Easley, South Carolina 29640. Our telephone number at that location is (864) 855-3900.

We maintain an Internet website at www.csioutiftters.com. Certain pertinent information about our business, products and services and recent developments is posted on our website. The information on our website does not constitute a part of this report.

We are registered under section 12(g) of the Exchange Act, and are subject to the information requirements of the Exchange Act. We file annual, quarterly and current reports and other information with the Securities and Exchange Commission (SEC). You may read and copy any document that we file at the SEC's public reference room facility located at 100 F Street, N.E., Washington, D.C. 20549. Please call the SEC at 1-800-SEC-0330 for further information on the public reference room. The SEC maintains an Internet site at <http://www.sec.gov> that contains reports and other information regarding issuers, including us, that file documents with the SEC electronically through the SEC's electronic data gathering, analysis and retrieval system known as EDGAR.

Our common stock is traded in the over-the-counter market under the symbol CSWI.OB. Trade information is reported on the OTC Bulletin Board.

B. Overview

We develop software and provide hardware-based technology solutions. We monitor our business as two segments, but take advantage of cross-selling and integration opportunities. Our internally developed software is sold and supported through our software applications segment. We provide hardware-based technology solutions through our technology solutions segment. By strategically combining our fund accounting software with our ability to integrate computer and other hardware, we have been successful in providing a variety of technological solutions to over 700 clients located in South Carolina, North Carolina, Georgia, Alabama, Louisiana, Mississippi, Tennessee, and Florida. We are pursuing a national presence with a primary, initial focus on the southeastern region of the United States.

Software Applications Segment

Our software applications segment develops accounting and administrative software applications that are designed for organizations that employ fund accounting. These organizations include our primary target market: municipalities, school districts and local governments. Our software provides a wide range of functionality to handle public sector and not-for-profit accounting requirements including receipt and tracking of funds, application of purchases, payables, investments and expenditures by fund, and production of financial and informational reports. The software is written in modules which can be sold separately or as a fully-integrated package so that information keyed in one module will be updated electronically into other modules to minimize data entry and improve productivity. In addition to the modules covering general accounting functions, specialty modules are also available. The software modules available include:

General (or Fund) Ledger;

Accounts Payable;

Purchasing;

Payroll;

Personnel;

Employee Absence/Substitutes;

Inventory;

Utility Billing; and

Other specialty modules designed for government markets.

More detailed information concerning the modules noted above and additional specialty modules is presented in G. Products and Services.

The acquisition of McAleer included the purchase of its competitive fund accounting software product. While no two software products are alike, and each frequently provides advantages or disadvantages in different areas when compared to competitive offerings, McAleer's fund accounting software is similar in functionality to CSI's product. The primary difference is that McAleer's product lacks the modules focused on the local government and municipality market.

Table of Contents

McAleer is in the process of upgrading approximately 60% of its customers to the latest major release of the McAleer fund accounting system. These upgrades provide additional revenue due to the increased pricing structure to reflect the enhancements in the latest major release. Accordingly, while not estimable, we anticipate an ongoing improvement in our recurring revenues through this upgrade process.

It is our plan to eventually move to one product platform, taking advantage of the best functionality in both software products. This move is a long-term goal which we will not achieve for a few years, and expect will be based on both the latest McAleer (NextGen) and CSI (SmartFusion) product releases. Accordingly, this product will follow the upgrades of both CSI's and McAleer's customers to the latest releases. We plan to support both CSI's and McAleer's products, including providing the upgrades and program changes deemed necessary to solidly support our customers' needs, until such time as we can achieve a smooth transition to a single platform.

We also provide standards-based lesson planning software. This software is designed to allow teachers to create lesson plans that tie to a state's curriculum standards. Lesson plans may then be reviewed by school administrators and reports generated to determine if standards have been met. Additional information concerning the standards based learning planning software is presented in G. Products and Services.

Our software applications segment includes a staff of software developers, implementers, trainers, sales personnel and applications support specialists focused primarily on the development, sale, deployment and support of our in-house software products. From time-to-time, our applications support specialists also provide support for the technology solutions segment. This staff is augmented by additional resources providing the same types of services for the McAleer suite of products.

Typically, sales of software and related services generate significantly higher margins than sales of hardware. Because revenues in our software applications segment result from sales and support of software products developed for resale, and are coupled with a relatively small volume of related hardware sales (also referred to as software and related services), our software applications segment produces higher margins than our technology solutions segment. Conversely, revenues in our technology solutions segment result primarily from hardware sales, and a relatively smaller amount of integration services (also referred to as hardware sales and related services). Accordingly, our technology solutions segment produces lower margins than our software applications segment.

Technology Solutions Segment

Our technology solutions segment has a staff of certified systems engineers capable of providing a broad range of technology solutions to our clients. Certified systems engineers are computer professionals who have passed a test indicating specialized knowledge in the design, planning and implementation of specific computer based technology. These solutions can include, among other capabilities, planning, installation and management of computer, internet telephony, wireless, video conference, security monitoring and distance and classroom learning projects. Through this segment we also provide subsequent support and maintenance of equipment and systems.

In addition, we provide network integration solutions as a value added reseller (selling equipment purchased from vendors to which we have added our engineering services) of computer hardware and engineering services. These technologies include, but are not limited to:

technology planning (developing plans to purchase or upgrade computers, telephone equipment, cabling and software);

hardware/software sales and installation;

system and network integration (combining different computer programs, processes and hardware such that they operate and communicate seamlessly as a tightly-knit system);

wide area networking (linking a group of two or more computer systems over a large geographic area, usually by telephone lines or the internet);

wireless networking (linking a group of two or more computer systems by radio waves);

IP Telephony and IP Surveillance (sending voice calls and surveillance across the internet using internet protocol (IP), a standard method for capturing information in packets);

project management (overseeing installation of computers, telephone equipment, interactive white board equipment, cabling and software);

Table of Contents

support and maintenance (using Novell, Microsoft, Cisco and Citrix certified engineers and other personnel to fix problems);

system monitoring (proactively monitoring computers and software to detect problems); and

education technologies (distance learning and classroom learning tools, including interactive white board solutions).

In addition to our engineers, our technology solutions segment includes a staff of sales persons, project managers and product specialists. Our technology solutions segment also purchases and resells products from a variety of manufacturers such as Hewlett Packard, Cisco, Microsoft, Novell, Promethean, Tandberg and DIVR, and supports the software applications segment.

Currently our business efforts are focused on the two key operating segments: internally developed software applications and related service and support (our software applications segment), and other technology solutions and related service and support (our technology solutions segment).

The chart below shows revenues, gross profit and gross margin by business segment for the years ended December 31, 2007 and 2006.

<i>(in thousands)</i>	Year Ended December 31, 2007	Year Ended December 31, 2006
Revenues		
Software applications segment	\$ 10,478	\$ 5,020
Technology solutions segment	44,719	23,534
Revenues	\$ 55,197	\$ 28,554
Gross Profit		
Software applications segment	\$ 4,362	\$ 2,664
Technology solutions segment	6,959	3,709
Gross Profit	\$ 11,321	\$ 6,373
Gross Margin		
Software applications segment	41.6%	53.1%
Technology solutions segment	15.6%	15.8%
Gross Margin	20.5%	22.3%

The decline in the margin, driven primarily by a decline in the margin in the software applications segment, is due primarily to the addition of McAleer, which has historically reported lower margins than CSI-Easley.

C. History and Development of CSI South Carolina**Initial Development**

Our current business operations are those of CSI South Carolina. CSI South Carolina was incorporated under the name of Compu-Software, Inc. as a South Carolina corporation on January 12, 1990, and founded by Joe G. Black, our former interim Chief Financial Officer; Nancy K. Hedrick, our President, Chief Executive Officer and Director; and Beverly N. Hawkins, our Secretary and Senior Vice President of Product Development. Ms. Hedrick and Ms. Hawkins previously worked for Data Management, Inc. (DMI), and while employed by DMI, they developed a software program for an accounting system designed for the local government and the K-12 education sector. Ms. Hedrick and Ms. Hawkins left DMI to work for Holliday Business Service, Inc. (HBS) and shortly thereafter, in February of 1989, DMI sold the accounting system software to HBS. HBS created a division of the company for this accounting system named CompuSoft. In January of 1990, Ms. Hawkins and Ms. Hedrick left HBS to create CSI South Carolina under the name of Compu-Software, Inc. In connection with the establishment of the new company, HSB sold the rights to the CompuSoft software to Compu-Software, Inc., which subsequently changed its name to Computer Software Innovations, Inc.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Mr. Black, a former partner with HBS, recognized the value of the software targeted at a potentially attractive niche market, and teamed up with Ms. Hedrick and Ms. Hawkins in their formation of Compu-Software, Inc. The marketing of the accounting software and supporting the developing client base was the core business of CSI South Carolina from its incorporation until 1999. Beginning with a small, established client base, CSI South Carolina was profitable near inception. During this nine year period, it grew from the original two employees (Ms. Hedrick and Ms. Hawkins), fifteen clients and modest revenues to approximately thirteen employees, a client base of more than 70 customers, and revenues of more than a million dollars.

In early 1999, the original principals were joined by Thomas P. Clinton, our Senior Vice President of Strategic Relationships and Director; and William J. Buchanan, our Senior Vice President of Delivery and Support. Messrs. Buchanan and Clinton had been employees of another value added reseller and for many years had worked closely with CSI South Carolina to provide hardware

Table of Contents

network support to its clients. When their former employer began to de-emphasize the K-12 education market, Messrs. Buchanan and Clinton elected to join CSI South Carolina. CSI Technology Resources, Inc. was formed as a wholly-owned subsidiary of CSI South Carolina to be a value added reseller of computer hardware and network integration services. A value added reseller is a business that resells computers and other technology hardware or software coupled with value adding solutions such as installation services, software, customization and project management.

The addition of the technology sector provided an additional revenue source from the existing client base and new contacts. The result was an increase in revenues from approximately \$2 million in 1999 to revenues of approximately \$44.7 million for the fiscal year ended 2007.

By 2000, CSI Technology Resources, Inc. ceased to operate or be accounted for as a separate organization. Accordingly, Ms. Hedrick, Ms. Hawkins and Messrs. Black, Clinton and Buchanan became equal shareholders in CSI South Carolina. Each principal managed a specific area of the business (i.e., sales, technical support services, product development, engineering and administration-finance). The business has continued to operate in a similar manner following the 2005 reverse merger.

Events Leading Up to 2005 Restructuring

In 2001, Joe Black, one of the owners and the Chief Financial Officer of CSI South Carolina at the time, announced to the other four owners that he expected to retire within three years. The five owners of CSI South Carolina began to plan for the approaching retirement of Mr. Black and for the possible disposition of his shares of stock in connection with his retirement. The owners decided to look for financing and considered the possibility of selling stock from each owner in CSI South Carolina to an investor, as well as positioning CSI South Carolina for growth. CSI South Carolina interviewed a few investment banking firms in 2001 and 2002, and selected The Geneva Companies, Inc. (Geneva), an affiliate of Citigroup, Inc. Management engaged Geneva to advise CSI South Carolina and the five principals on valuation and financing strategies. Geneva directed the process of locating potential strategic or financial partners for CSI South Carolina.

CSI South Carolina spoke with several interested parties from 2003 into 2004. CSI South Carolina and its owners signed a letter of intent on May 10, 2004 to sell the stock of CSI South Carolina to Yasup, LLC of New York, New York, which CSI South Carolina management believed to be affiliated with a larger company in CSI South Carolina's industry. Ultimately, the parties could not come to terms by the termination date of the letter of intent or afterwards, and the proposed acquisition was abandoned.

Through its financial adviser, Liberty Company, LLC (Liberty), Barron Partners LP, a Delaware limited partnership (Barron), became aware that CSI South Carolina was seeking to restructure. After the July 19, 2004 letter of intent with Yasup, LLC had terminated, Barron approached the owners of CSI South Carolina through Geneva about financing possibilities. On December 2, 2004, CSI South Carolina and Barron executed a letter of intent by which Barron proposed to buy common stock from the CSI South Carolina owners and acquire other rights in CSI South Carolina (or another company into which CSI South Carolina would merge) after the transaction.

Barron is a micro-cap fund, limited by its organizational documents to investments in companies that are public entities, so the transaction required the merger of CSI South Carolina into a public company that was already reporting to the SEC prior to the investment by Barron. In order to accomplish this, Barron and CSI South Carolina determined that the most effective alternative was for CSI South Carolina to merge into a publicly held inactive shell corporation. In addition, our shareholders believed that converting CSI South Carolina into a publicly held entity would provide the Company, in the long term, with access to public capital markets that could provide funds for future strategic growth. A public market for the Company's stock would also provide the five shareholders with liquidity for their equity investment in the recapitalized Company.

On February 10, 2005, CSI South Carolina and VerticalBuyer, its then 77% owned subsidiary and an inactive shell company, entered into the Agreement and Plan of Merger. The agreement provided that CSI South Carolina would merge into VerticalBuyer, with VerticalBuyer being the surviving corporation. As a result, CSI South Carolina became a publicly held company reporting to the SEC. Also on February 10, 2005, CSI South Carolina and Barron entered into definitive agreements for a preferred stock investment in the Company following its merger with CSI South Carolina. The merger and other transactions contemplated by the Barron letter of intent and definitive agreements were consummated February 11, 2005 and are described in more detail in E. The Merger and Recapitalization below.

D. Subsidiaries

Our consolidated financial statements continue to include CSI Technology Resources, Inc. as a wholly-owned subsidiary. However, this subsidiary no longer has any significant operations or separate accounting. Its former operations are now accounted for within CSI, except that CSI Technology Resources, Inc. is still named in certain contracts. At a future date, these contracts may be transferred to the parent and the subsidiary deactivated, subject to a review of any tax and legal consequences. As the Company files a consolidated tax return and has been

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

accounting for all activities through CSI, there should be no financial or tax implications related to the formal procedures which would be undertaken to deactivate the subsidiary.

We have no other subsidiaries.

Table of Contents

E. The Merger and Recapitalization

In the first quarter of 2005, the Company completed a series of recapitalization transactions which began January 31, 2005 with a change in control due to the purchase of a majority of our common stock by CSI South Carolina. These culminated on February 11, 2005 with the merger of CSI South Carolina into VerticalBuyer, our issuance of preferred stock, common stock, common stock warrants and certain subordinated notes, and the change of our name to Computer Software Innovations, Inc.

Merger Accounting

The merger was accomplished through an exchange of equity interests.

Under Statement of Financial Accounting Standards (SFAS) No. 141 Business Combinations, the merger of CSI South Carolina into VerticalBuyer was considered to be a reverse acquisition, whereby CSI South Carolina was considered to be the acquirer. Accordingly, the assets and liabilities of CSI South Carolina continued to be recorded at their actual cost. VerticalBuyer had no assets or liabilities at the time of acquisition. Under reverse acquisition accounting, the financial statements of the surviving corporation (VerticalBuyer) were the financial statements of the acquirer (CSI South Carolina). Costs associated with the reverse acquisition were required to be expensed as incurred. Shares issued in the transaction are shown in our financial statements as outstanding for all periods presented and the activities of the surviving company (VerticalBuyer) are included only from the date of the transaction forward. Shareholders' equity of CSI South Carolina, after giving effect for differences in par value, has been carried forward after the acquisition.

Description of Merger and Related Investment Transactions

Purchase of Majority Interest of VerticalBuyer by CSI South Carolina

On January 31, 2005, CSI South Carolina purchased 13,950,000 shares of the common stock, \$0.001 par value, of VerticalBuyer from Maximum Ventures, Inc. (Maximum Ventures) pursuant to a Stock Purchase Agreement. The shares purchased by CSI South Carolina represented approximately 77% of VerticalBuyer's outstanding common stock. The purchase price was \$450,000, with approximately \$53,000 of that amount going to satisfy the outstanding liabilities of VerticalBuyer at that time. CSI South Carolina also reimbursed Maximum Ventures for legal expenses of \$20,000. The purchase price was reduced by a \$5,000 allowance from Maximum Ventures to defray a portion of the estimated costs of preparation of tax returns for 2001, 2002, 2003 and 2004 and accountant fees for the 2004 audit. CSI South Carolina also received credit for the \$50,000 pre-paid advisory fee previously paid by Barron to Maximum Ventures as earnest money. As a part of its preferred stock investment in the Company, Barron contributed the \$50,000 prepayment for the Company's benefit to help defray transaction legal expenses. There were no finder's fees or other monetary consideration paid in connection with the Stock Purchase Agreement and the purchase of the VerticalBuyer shares.

The purpose of the purchase of the VerticalBuyer shares was the procurement of a publicly held inactive shell corporation into which CSI South Carolina could merge and itself become a publicly held corporation reporting to the SEC. The reasons for utilizing a shell corporation are described in more detail under C. History and Development of CSI South Carolina Events Leading Up to 2005 Restructuring.

Reverse Stock Split

On January 31, 2005, the board of directors of VerticalBuyer approved a reverse stock split in order to facilitate a potential merger with CSI South Carolina. In the reverse stock split, every 40 shares of VerticalBuyer's common stock issued and outstanding on the record date, February 10, 2005, were converted and combined into one share of post-split shares. The reverse split was effected pursuant to an amendment to our certificate of incorporation and was paid on February 11, 2005. No fractional shares were issued, nor any cash paid in lieu thereof. Rather, all fractional shares were rounded up to the next highest number of post-split shares and the same issued to any beneficial holder of such pre-split shares which would have resulted in fractional shares. Accordingly, each beneficial holder of our common stock received at least one post-split share and no stockholders were eliminated. Pursuant to the amendment to our certificate of incorporation effecting the reverse stock split, the number of authorized and preferred shares remained unchanged at 50,000,000 and 5,000,000, respectively. Continental Stock Transfer & Trust Company, New York, New York, our transfer agent, served as exchange agent for the reverse split.

Name Change

On February 4, 2005, the board of directors of VerticalBuyer approved the change of our name from VerticalBuyer, Inc. to Computer Software Innovations, Inc. The change of our name to Computer Software Innovations, Inc. became effective on February 10, 2005, concurrently with the reverse stock split, upon the filing of an amendment to our certificate of incorporation.

Table of Contents

CSI South Carolina Redemption of Options

Prior to the merger on February 9, 2005, CSI South Carolina redeemed stock options for 6,234 (738,195, as restated in our consolidated financial statements) shares of its common stock in exchange for \$899,144 cash. Under CSI South Carolina's stock option plan, certain non-executive employees had been granted stock options for an aggregate of 9,000 (1,065,746, as restated in our consolidated financial statements) shares of CSI South Carolina common stock. The redeemed options represented 73.34% of then outstanding options for 8,500 (1,006,538, as restated in our consolidated financial statements) shares. Pursuant to the plan, the option holders retained the remaining portion of their options. In connection with the merger, the surviving corporation assumed such options, which after the merger became exercisable for shares of common stock of the surviving corporation at the share ratio applicable to shares of CSI South Carolina common stock cancelled in the merger. Following the merger, the remaining options were exercisable for 268,343 shares of the Company's common stock.

CSI South Carolina Dividends

Prior to the merger on February 11, 2005, CSI South Carolina declared dividends to its five shareholders totaling \$3,460,000. Those shareholders were: Nancy K. Hedrick, Joe G. Black, Beverly N. Hawkins, Thomas P. Clinton and William J. Buchanan. Of this amount, \$960,000 was paid in cash and \$2.5 million recorded as subordinated dividend notes payable to each shareholder. These notes were repaid immediately following the merger from the proceeds of the issuance of the preferred stock and the approximately \$1.9 million subordinated loan from Barron.

The Merger

On February 10, 2005, VerticalBuyer and CSI South Carolina executed an Agreement and Plan of Merger. On February 11, 2005, CSI South Carolina merged into VerticalBuyer, with VerticalBuyer continuing as the surviving corporation. In the merger, the former stockholders of CSI South Carolina received, in exchange for their shares of CSI South Carolina common stock, two sets of notes totaling \$3,624,800 and \$1,875,200, respectively, and 2,526,905 shares of our common stock. Such consideration was in addition to the pre-merger dividend by CSI South Carolina. The set of notes totaling \$3,624,800 was repaid to the former CSI South Carolina shareholders immediately following the merger from the proceeds of the preferred stock and the \$1,875,200 subordinated note issued to Barron, as described under [Sale of Preferred Stock and Warrants](#) below. Subordinated notes payable to the former shareholders of CSI South Carolina totaling \$1,875,200 remained outstanding following the merger. Amounts outstanding under these notes totaled \$1,125,200 as of December 31, 2007. The terms of the subordinated notes are described more fully under [Subordinated Notes](#) below.

The shares of the common stock of VerticalBuyer previously held by CSI South Carolina, representing approximately 77% of VerticalBuyer's issued and outstanding capital stock, were cancelled in the merger. The remaining stockholders of VerticalBuyer retained their existing shares, subject to the 40 to 1 reverse stock split. Such minority stockholders had appraisal rights as provided in accordance with Delaware law, whereby they could elect to have their shares repurchased by the surviving corporation. No minority stockholders elected to exercise their appraisal rights.

As a result of the reverse stock split and merger, immediately following the merger the Company had approximately 2.6 million shares of common stock outstanding. As a result of the issuance of the preferred stock and warrants (discussed in [Sale of Preferred Stock and Warrants](#) below), on a diluted basis, assuming the conversion of the preferred stock and exercise of outstanding warrants and options, approximately 17.3 million shares of common stock were outstanding.

Sale of Preferred Stock and Warrants

On February 10, 2005, VerticalBuyer entered into a Preferred Stock Purchase Agreement with Barron. Pursuant to the agreement, on February 11, 2005, immediately following the consummation of the merger, we issued to Barron 7,217,736 shares of our newly created Series A Convertible Preferred Stock in exchange for the payment of \$5,042,250. The agreement also provided that Barron would lend the merged company an additional \$1.9 million, in the form of a subordinated note on the same terms as the subordinated notes payable to the former CSI South Carolina shareholders in the merger. Barron was also issued two warrants to purchase in the aggregate 7,217,736 shares of our common stock. The preferred stock is convertible into common stock on a one-for-one basis. The exercise prices of the warrants were originally \$1.3972 and \$2.0958 per share. Each warrant is exercisable for half of the total warrant shares. The terms and conditions of the warrants are identical except with respect to exercise price.

Both the conversion of the preferred stock and the exercise of the warrants are subject to restrictions on ownership that limit Barron's beneficial ownership of our common stock. Initially, Barron was generally prohibited from beneficially owning greater than 4.99% of our common stock, and such restriction could be waived by Barron upon 61 days prior notice. It was the intention of the Company and Barron that the preferred stockholder never acquire greater than 4.99% of the Company's common stock and never be deemed an affiliate or control person under federal

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

securities laws. For avoidance of doubt, Barron and we agreed to remove the 61 day waiver provision and to impose a non-waivable beneficial ownership cap of 4.9%. These agreements were implemented on November 7, 2005. Pursuant to the terms of the Certificate of Designation governing the preferred stock, and the warrants, the ownership cap may not be amended or waived without the approval of the common stockholders of the Company, excluding for such vote all shares held by the holders of preferred stock and warrants (including Barron) and any directors, officers or other affiliates of the Company.

Table of Contents

The warrants may be exercised on a cashless basis. In such event, we would receive no proceeds from their exercise. So long as we maintain an effective registration statement for the shares underlying the warrants, a warrant holder is prohibited from utilizing a cashless exercise.

On December 29, 2006, we entered into an agreement with Barron to divide, amend and restate the warrants. In particular, a portion of such warrants were reduced in price. One warrant was amended and divided into two warrants, one for 1,608,868 shares of common stock at an exercise price of \$0.70 per share and another for 2,000,000 shares of common stock at the original exercise price of \$1.3972 per share. The second warrant was likewise amended and divided into two warrants, one exercisable for 1,608,868 shares of common stock at a price of \$0.85 per share and another for 2,000,000 shares of common stock at the original exercise price of \$2.0958 per share.

Information on the accounting treatment of the warrants is presented in Registration Rights Agreement below.

The terms of the Series A Convertible Preferred Stock are contained in the Certificate of Designation of Preferences, Rights and Limitations of Series A Convertible Preferred Stock, which is part of our charter and filed with the Secretary of State of Delaware. Disclosure on the provisions of the Certificate of Designation is contained below in Certificate of Designation.

Other provisions of the warrants are discussed in Warrants below.

Registration Rights Agreement

In conjunction with the Preferred Stock Purchase Agreement, the Company also entered into a Registration Rights Agreement with Barron on February 10, 2005, whereby we agreed to register the shares of common stock underlying the preferred stock and warrants to be sold to Barron. Under the initial terms of the Registration Rights Agreement, the Company was obligated to file, within 45 days following the execution of the Registration Rights Agreement, a registration statement covering the resale of the shares. The agreement also obligated us to use our best efforts to cause the registration statement to be declared effective by the SEC within 120 days following the closing date of the registration rights agreement (February 11, 2005) or generally such earlier date as permitted by the SEC. Barron may also demand the registration of all or part of such shares on a one-time basis and, pursuant to piggy-back rights, may require us (subject to carveback by a managing underwriter) to include such shares in certain registration statements we may file. We are obligated to pay all expenses in connection with the registration of the shares. Previously, we were liable for liquidated damages in the event the registration of shares was not effected pursuant to the agreement.

Under the terms of the initial Registration Rights Agreement, liquidated damages were triggered if we failed (i) to file the registration statement within 45 days from February 11, 2005, (ii) to cause such registration statement to become effective within 120 days from February 10, 2005, or (iii) to maintain the effectiveness of the registration statement. These requirements were subject to certain allowances: 45 Amendment Days during any 12-month period to allow the Company to file post-effective amendments to reflect a fundamental change in the information set forth in the registration statement, and Black-out Periods of not more than ten trading days per year in our discretion, during which liquidated damages would not be paid.

Under the initial terms of the Registration Rights Agreement with Barron, the liquidated damages were payable in cash at a rate of 25% per annum on Barron's initial preferred stock and warrant investment of \$5,042,250. Because the liquidated damages were payable in cash, under Emerging Issues Task Force (EITF) 00-19 Accounting for Derivative Financial Instruments Indexed to and Potentially Settled in a Company's Own Stock a potential obligation (referred to under EITF 00-19 as a derivative financial instrument) existed until the registration became effective. Accordingly, the entire proceeds of the preferred stock issuance except for the par value were allocated to the warrants and recorded as a liability on the balance sheet at the date of the transaction.

It was not the intent of either CSI or Barron that the Registration Rights Agreement result in the majority of the proceeds from the preferred stock and warrant issuance being recorded as a liability rather than equity. In response, on November 7, 2005, CSI and Barron entered into an amendment to the Registration Rights Agreement that eliminated cash liquidated damages and replaced them with liquidated damages in the form of additional shares of Series A Convertible Preferred Stock. Pursuant to the amendment, 2,472 shares of preferred stock were to be issued to Barron for each day when liquidated damages were triggered. The amendment also resolved a conflict in the initial Registration Rights Agreement whereby some time periods for registration and liquidated damages were determined with respect to the date of the agreement (February 10, 2005) while others utilized the closing date of the agreement (February 11, 2005). Under the amended agreement, all such periods are determined in relation to February 11, 2005.

Prior to the execution of the amendment, Barron agreed to waive any liquidated damages through November 30, 2005 pursuant to a waiver dated September 30, 2005. Barron had also waived liquidated damages on three prior occasions. In exchange, during the fourth quarter of 2005 we paid Barron \$50,000 and agreed to cause the registration statement to become effective under the Registration Rights Agreement on or before November 30, 2005. We entered into a fifth waiver extending the required effectiveness date until January 31, 2006 and a sixth waiver extending

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

the required effectiveness until February 28, 2006. Our registration statement was declared effective by the SEC on February 14, 2006.

Table of Contents

On December 29, 2006, in conjunction with the repricing of a portion of the warrants described above under Sale of Preferred Stock and Warrants, the Registration Rights Agreement was amended. We agreed to extend the registration period by one year until February 11, 2009. Barron agreed to waive any further liquidated damages under the Registration Rights Agreement. Prior to the amendment, the failure by the Company to maintain the effectiveness and availability of a registration statement, in excess of certain black-out and other exception periods, subjected the Company to liquidated damages in the form of 2,472 shares of Series A Convertible Preferred Stock per day. Absent the amendment, liquidated damages would have been payable for a portion of November and all of December 2006. The waiver by Barron ran through February 11, 2007, when the liquidated damages provisions of the Registration Rights Agreement expired. Accordingly, the liquidated damages provisions have been effectively eliminated.

Subordinated Notes

On February 11, 2005, the Company also issued six subordinated promissory notes payable, respectively, to Barron and the five former shareholders of CSI South Carolina: Nancy K. Hedrick, Joe G. Black, Beverly N. Hawkins, Thomas P. Clinton and William J. Buchanan. The five notes payable to the former CSI South Carolina shareholders were issued pursuant to the Agreement and Plan of Merger and constituted a portion of the shareholders consideration in the merger. The note payable to Barron, issued pursuant to the Preferred Stock Purchase Agreement, evidences a subordinated loan to the Company in connection with Barron's investment in the preferred stock. All such notes rank equally in right of payment in the event of bankruptcy or liquidation of the Company, or similar events, and are subordinated in right of payment to all other non-subordinated debt of the Company. Payments of principal and interest may be paid as agreed under such subordinated notes, so long as, generally, we are not in default under any of our senior indebtedness.

The Barron note provides that the Company will repay to Barron \$1,875,200, with interest accruing at an annual rate of the prime rate plus 2%. We were to repay the principal on the note in full on or before May 10, 2006. Any past due and unpaid amounts bear interest at the rate of 15% per annum until paid in full. At December 31, 2007, \$1,125,200 was outstanding under the Barron subordinated note.

The aggregate principal sum borrowed under the notes payable to the five former shareholders of CSI South Carolina is \$1,875,200, or \$375,040 per individual. Other than the principal amount borrowed, the terms of the notes are substantially identical to the note payable to Barron. On December 31, 2007, the aggregate outstanding balance on the five shareholder subordinated notes was \$1,125,200.

We did not repay the subordinated notes to Barron and the former CSI South Carolina shareholders at their maturity on May 10, 2006. After consultation with the bank and the holders of the subordinated notes, we determined that it was not in the best interest of all stakeholders to repay the notes at that time. We anticipate the continued cooperation of the noteholders and the ultimate successful negotiation of a maturity date extension or other restructuring of our subordinated debt with the holders. The subordinated notes may, for example, be refinanced as a part of the financing of future acquisitions, or repaid from the proceeds of the exercise of the warrants by Barron. However, we can give no assurance that we will be able to successfully restructure, extend or refund the subordinated notes, and that the noteholders will continue to cooperate. The repayment of the subordinated notes is discussed in more detail under Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations G. Liquidity and Capital Resources.

Certificate of Designation

The terms of the Series A Convertible Preferred Stock are governed by an Amended and Restated Certificate of Designation of Preferences, Rights and Limitations of Series A Convertible Preferred Stock filed with the Delaware Secretary of State on November 7, 2005, which we refer to as the Certificate of Designation. The Certificate of Designation authorizes the issuance of up to 8,300,472 shares of Series A Convertible Preferred Stock. The preferred stock is convertible into shares of our common stock on a one-for-one basis at the election of the holder. There are no redemption provisions.

Significant features of the Certificate of Designation include:

A holder of preferred stock (including Barron) is prohibited from converting any shares of the preferred stock if such conversion would result in it beneficially owning greater than 4.9% of our common stock. The only exception to the beneficial ownership limitation is in the event of a change in control, whereby all of the preferred stock would be automatically converted;

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Provides that the beneficial ownership limitation may only be amended or waived with the unanimous consent of the Series A Convertible Preferred stockholder(s) and a majority of the non-affiliated holders of outstanding common stock (excluding as affiliated holders all holders of the Series A Preferred Stock or the related warrants);

Table of Contents

Provides that the preferred stockholder may elect liquidation treatment and recover its investment in the preferred stock under certain stock transfer or business combination transactions (for example, in the event of a tender offer or compulsory share exchange);

No dividends are payable with respect to the Series A Convertible Preferred Stock or upon liquidation of the Company;

The Series A Convertible Preferred Stock generally has no voting rights; and

Upon liquidation of the Company, the preferred stockholders are entitled to be paid out of the assets of the Company an amount equal to \$0.6986 per share before any distributions are made to common stockholders.

Warrants

Pursuant to the terms of a Preferred Stock Purchase Agreement with Barron, we issued to Barron two warrants to purchase a total of 7,217,736 shares of our common stock. The respective exercise prices of the warrants were \$1.3972 per share (Warrant A) and \$2.0958 per share (Warrant B), with each warrant exercisable for half of such shares (the Original Warrants).

In order to encourage their earlier exercise, on December 29, 2006, we agreed to a repricing of a portion of the warrants. One warrant was amended and divided into two warrants, one for 1,608,868 shares of common stock at an exercise price of \$0.70 per share and another for 2,000,000 shares of common stock at the original exercise price of \$1.3972 per share. The second warrant was likewise amended and divided into two warrants, one exercisable for 1,608,868 shares of common stock at a price of \$0.85 per share and another for 2,000,000 shares of common stock at the original exercise price of \$2.0958 per share.

Initially, Barron was subject to the same waivable beneficial ownership limitation as originally applicable to the preferred stock. When the preferred stock was amended, the warrants were amended on November 7, 2005 to impose a non-waivable beneficial ownership limitation of 4.9%. This limitation applies to any subsequent holder of the warrants currently held by Barron. Following amendment, Barron may not exercise its warrants to purchase shares of common stock if and to the extent Barron's beneficial ownership of our common stock would exceed 4.9%. The 4.9% beneficial ownership limitation is not applicable in the event of a change in control, which is defined as (i) our consolidation or merger with or into another company or entity in which we are not the surviving entity, or (ii) the sale of all or substantially all of our assets to another company or entity not controlled by our then existing stockholders in a transaction or series of transactions. We are obligated to give the holder of the warrant 30 days notice prior to a change in control. The beneficial ownership limitation may only be waived or amended with the consent of the holder of the warrant and the consent of the non-affiliate holders of a majority of the shares of our outstanding common stock.

The warrants provide that they may be exercised on a cashless basis after February 11, 2006 if there were no registration statement effective permitting the resale of the common stock underlying the warrants. So long as we maintain the effectiveness of a registration statement for the shares underlying the warrants, the warrant holder is prohibited from utilizing a cashless exercise.

F. Our Niche in the Governmental and Educational Technology Market

There are approximately 3,100 counties (according to the U.S. Dept. of Census), 36,000 cities and towns (according to the National League of Cities) and more than 14,000 school districts (according to the National Center for Education Statistics) in the United States. Each of these organizations is a potential candidate for an integrated financial management system as well as for various technology services and products. Since many local governments are moving toward outsourcing of information technology services, even more opportunities are available for our services. In 2007, the sale of software, hardware and services to non-educational governmental organizations accounted for approximately 8% of our total sales.

Our customer base is discussed in more detail under L. Customers below.

G. Products and Services

CSI Fund Accounting Software

We provide the CSI Fund Accounting Software (CSI Accounting+Plus) to a variety of clients in an integrated financial management system. We generate revenue from the CSI Accounting+Plus as outlined below. Each of these sources of revenue is described in the remainder of this

section.

Sales of software licenses to new clients;

Sales of new/additional modules to existing clients;

Installation of software;

Data conversion from legacy systems;

End user training;

Guaranteed service agreements; and

Sales of third party products to enhance functionality of CSI Accounting+Plus.

Table of Contents

Prior to 1999, our proprietary fund accounting system was a DOS-based product. DOS, or Disk Operating System, was the personal computer operating software used widely before the release of Microsoft's Windows® software. In July 1999, we released a Windows® based version of the system as CSI Accounting+Plus. This product was written with Microsoft's Visual FoxPro® database, a relational database, and utilizes Crystal Reports®, an industry standard report generator. Over the next four years, approximately 120 software clients upgraded from the DOS based system to the new product. For our clients, this upgrade process included data conversion, installation and training on the new system and, in many cases, a hardware upgrade. The CSI Accounting+Plus system has also been installed in approximately 150 new clients during the period from 1999 to 2007. In addition to software sales, we offer ongoing customer support for the accounting software. This support is provided under a guaranteed service agreement, providing the client with phone support, online user assistance and routine updates to the software.

While we continue to market the Visual FoxPro® version, the CSI Accounting+Plus system is currently being rewritten with Microsoft's .Net (pronounced dot-net) and SQL (pronounced sequel and standing for Structured Query Language) database technologies. This new version, SmartFusion, will provide improved performance, scalability, more flexible data access and native data-tagging (XML or Extensible Mark-up Language) web support. SQL and .Net have become the industry standards for software development, and XML has become an industry standard for data tagging and retrieval. We have already completed the conversion of the majority of our core accounting modules, with the personnel module still in progress. We anticipated completing the personnel and certain additional modules over the remainder of 2008. The current CSI product contains the functionality required by our clients but moving to the SQL and .Net platform will allow us to be more competitive on both a regional and national level.

A new software service option called Service+Plus has also been developed. This plan will provide the normal coverage of a guaranteed service agreement but will also include version protection: clients will get new major releases of the software without additional fees. Service+Plus will also provide clients free attendance to webinars (seminars which may be attended remotely by use of the internet), free user conference attendance, one free Crystal Reports® training class each year, disaster recovery (off-site data storage) and discounts on additional software modules, training and engineering services.

The CSI Accounting+Plus software suite is designed as a modular solution. The modules are sold separately to enable customers to pick and choose only those modules that are needed to provide desired functionality. The modules in the software suite are shown in the following table:

Accounting Modules

Accounts Payable
Accounts Receivable
Budget Preparation
Check Reconciliation
Cost Allocation
Fixed Assets
Fund Ledger
Payroll
Purchasing
System Manager

Specialty Modules

Audit Reporting
Claims Reimbursement
Food Service Reporting
Inventory
Pupil Activity Accounting
Warehouse Requisitions
Employee Self Service
Online Bill Pay

Payroll / Personnel Support Modules

Absent Employee Tracking
Applicant Tracking
Available Substitutes
Insurance and Benefits
Personnel

Municipal Modules

Business License
Cash Collections
Construction Permits
Utility Billing

Our development team writes and maintains the CSI Accounting+Plus modules. The support of these modules includes routine enhancements, governmentally required changes (e.g., Form W-2 format changes) and problem fixes. We provide updates to the CSI system through our website.

Standards Based Lesson Planner

In September 2005, we acquired the Standards Based Lesson Planning software from Eric Levitt of Carolina Education Services. The software is designed to allow teachers to create lesson plans that are tied to a state's curriculum standards. These lesson plans may then be reviewed by school administrators and a report generated to determine the standards that have been met or need to be met. This is particularly important as school systems develop higher accountability standards. In addition, the federal legislation of No Child Left Behind Act has focused greater

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

attention on schools' adequate yearly progress (AYP), and meeting curriculum standards is an important component of these measurements. Standards based lesson planning software allows a school to document its compliance with the curriculum standards as a component of its compliance with the No Child Left Behind Act legislation.

Table of Contents

We have converted this product to a Microsoft SQL database and internet-based product and are marketing it as a curriculum standards based lesson planner. The product is ready to market and we are currently developing a strategic marketing plan designed to accomplish profitable objectives and positive return. We continue to add functionality to the product based on feedback from current user groups. Costs related to identifying such functionality and their technological feasibility are expensed while costs related to programming of known technologically feasible improvements are capitalized.

We believe the addition of this product, while not yet material, may provide significant additional revenue in the future as we are able to offer an additional product to our existing school-based customers. However, we can give no assurance that this software product will in fact prove successful. We believe the product can achieve sufficient acceptance in the market place to cover our investment. If at anytime we were to determine it would not, at the time we reached such determination, we would write down all or the applicable portion of the capitalized costs related to this product based on projected cash flows. As of December 31, 2007, we had capitalized approximately \$500,000 related to this product, and had received approximately \$29,000 in revenues.

We believe the product may also provide a source of additional contacts and referrals. The gross profit received from each sale of this product may be significantly less than that of our traditional fund accounting software. As a result, we intend to use telesales as a cost effective method of generating additional contacts, have a dedicated sales representative, and may use the Internet as a medium for demonstrations and software delivery, in order to minimize selling and delivery costs.

Hardware Sales and Related Support Services

Our technology solutions segment provides network system solutions to more than 200 governmental organizations in South Carolina, North Carolina and Georgia. We also plan to market technology solutions into the five additional states where we have a presence as a result of the McAleer acquisition, and have already begun doing so in Alabama. This segment provides professional network integration services as well as network computing solutions to our customers. We strive to deliver high-quality hardware, software and related professional services to help our customers plan, acquire, implement, manage and upgrade their organizations' information systems.

We have established associations with some of the largest vendors in the industry, and with others whom we believe offer innovative products. We believe that strong industry relationships will further enhance our competitive position. We have developed and maintain the following vendor relationships:

Our focus on the K-12 sector has led to our developing relationships with vendors who specialize in technologies for the classroom. **Promethean Collaborative Classroom Solutions** offers what we consider to be the industry-leading solution for transforming the classroom into an interactive learning environment. Using Promethean's ActivBoards, students are able to use a stylus on a special electronic white board to interact with computer projected images. The computer reacts to the stylus activity and projects the results. By having an exclusive sales arrangement to market Promethean ActivBoards in North Carolina and South Carolina, we believe we are able to maintain gross margins. In addition to selling the ActivBoards, we offer installation services, end user training and market complementary products (e.g., projectors, PC Tablets) to be used with the boards for the collaborative classroom. Our classroom solutions are currently our primary revenue generator, generating approximately half of our technology solutions revenues.

Significant focuses in the technology solutions segment include IP (internet packet-based) telephony, wireless, system security and routing/switching. We have a strategic relationship with **Cisco Systems, Inc.** (Cisco), a worldwide leader in networking for the Internet and technology innovation, whereby Cisco provides the hardware necessary to implement these systems. We purchase the majority of our Cisco equipment through Ingram Micro. Ingram Micro is a multi-national distributor of technology hardware. Although we are an indirect reseller of Cisco products, we periodically work closely with Cisco representatives, particularly on large sales. This relationship occasionally produces customer leads and referrals. We also encourage our employees to pursue Cisco technical certifications, as such certifications as well as the achievement of certain sales volumes of Cisco products can make us eligible for certain incentives periodically offered by Cisco. We also participate in certain state contract pricing frameworks that Cisco has established with public entities. Purchases from Ingram Micro are made on an individual purchase order basis. We have no formal agreements with Ingram Micro.

We deploy desktops, notebook computers, personal devices and file servers in a variety of client network environments. We have a strategic relationship with **Hewlett Packard** (HP), which produces technology solutions that span information technology

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

infrastructure, personal computing and access devices, global services and imaging and printing for consumers, enterprises and small and medium business. We provide professional services to deploy these devices. Our relationship with HP consists primarily of the purchase of computers and printer equipment for resale. We purchase these products on an individual purchase order basis under a standard, nonexclusive reseller

Table of Contents

agreement. In addition to purchases directly from HP, we have arms-length business relationships with certain customers whereby the customers have elected to name us as their authorized HP representative. As the named representative, and as an incentive for the customer to approve us as the named representative, we provide various forms of assistance which can include assisting the customer in identifying the specific HP products that will meet its needs, summarizing and processing orders on behalf of the customer with HP, and providing certain support and HP authorized repair and maintenance for which we are separately compensated by HP. To provide these services, some of our personnel have received training and certifications from HP. As the named representative of HP, we assist the customers in placing their orders directly with, and we receive commissions from HP, rather than acting as the purchaser and reseller of HP's products. Due to the volume of business we do with HP, we also work very closely with HP representatives and receive support which may include special quantity or other pricing in competitive situations with products from other manufacturers, and may receive customer leads or referrals from time to time.

In order to offer visual communication equipment to our clients and prospective clients in order to allow video conferencing, administrative communications, home bound learning and professional development, we have developed a business relationship with **Tandberg**. In the education environment, Tandberg provides worldwide access to people, places and experiences without time or travel constraints. Through the public sector and business environment, Tandberg offers solutions in providing more efficient and effective training to employees, saving travel, time and money. Tandberg solutions include cameras, monitors, videophones and software.

Our relationship with Promethean is established through a reseller agreement, under which we are able to sell interactive whiteboard products on an exclusive basis in two states, South Carolina and North Carolina. In early 2008 we entered into an affiliate relationship with another vendor, providing us the opportunity to sell Promethean products in certain counties in the state of Alabama. Both the exclusive reseller agreements and the affiliate agreement provide us with the ability to sell both Promethean products into these markets, as well as provide additional opportunities to sell our related project management and technical services.

Our relationships with Cisco, HP, DIVR and Tandberg are established through standard reseller agreements. These agreements make us eligible to resell products on a generally non-exclusive basis, many in specifically authorized geographic regions, and make us eligible, from time to time, for periodic promotions, special offers and manufacturing standard volume discounts and rebates, when offered. Occasionally we may request special pricing for large volume deals, particularly in competitive situations, which may be approved on a case by case basis. Due to our sales and marketing success on behalf of vendors, we have been asked from time to time to represent products in new geographic regions. As we expand we will exploit these opportunities as they come available and as we have the financial justification for the physical presence to do so.

In addition to the above relationships, we also have developed relationships with Microsoft, Novell, Packeteer, Symantec, Citrix and other hardware-based solution providers, which are on similar terms with those of Cisco, HP, DIVR and Tandberg, and some of whose products we may purchase either from the manufacturers or through our distributor relationship with Ingram Micro (discussed above). We also have one additional vendor, Synnex. Our purchases from Synnex, like those from Ingram Micro, have, at times, equaled more than 10% of our annual purchase volume. Synnex is also a distributor of technology hardware. We have no formal agreement with Synnex and, like Ingram Micro, purchase technology accessories on a purchase order by purchase order basis. The products purchased from Synnex are also readily available through other vendors.

H. Strategy

In addition to our sales of software applications, technology solutions and related support and maintenance services, we provide technology consulting, including network and systems integration services as a part of our solutions sales efforts. These services also generate a significant amount of revenue by increasing demand for computer hardware equipment that we sell. Our marketing strategy is to provide a suite of software products coupled with full service integration of the hardware solutions that support those products and other back-office functions. We also seek to provide ongoing technical support, monitoring and maintenance services to support the client's continuing needs. We also market our hardware solutions and ability to provide a wide level of services and support independent from our software solutions. Such marketing to a fund accounting based organization may also lead to future software sales and integration services.

By providing a client the ability to call one solution provider and circumvent the difficulties that often arise when dealing with multiple vendors, we believe we are able to achieve higher long-term client satisfaction and a competitive advantage in the marketplace. Repeat business from our existing customer base has been key to our success and we expect it will continue to play a vital role in our growth. Over the past ten years we have retained more than 90% of our software customers. Our focus is on nurturing long-standing relationships with existing customers while establishing relationships with new customers.

Software

Fund Accounting Software

New Product Development

We continue to market the primary CSI software applications, which contain the functionality required by our clients. However, we are in the process of rewriting these applications using the latest Microsoft application programming tools and current Microsoft data storage and retrieval technologies. The new release, SmartFusion and EntryPoint, will allow us to expand more easily into additional states. We will continue to expand our product offerings to meet the needs of our clients both in the current version and in the new version.

Service+Plus

Our new service offering provides version protection for major releases of the software without additional fees, free attendance to seminars accessed remotely by use of the internet, free user conference attendance and disaster recovery (off-site data storage).

Hosted Services (ASP)

We are beginning to offer an ASP (Application Service Provider or CSI hosted) solution to new clients whereby they can access the software on CSI servers and run it remotely over the internet at a fixed monthly cost. Under this business model, the client can forego the significant up-front investment required to purchase computer hardware and install the software at its location.

Managed Backup Service

In late 2006, we began offering an automated data backup and restoration system, Gemini, which protects our clients' data and critical information. Our Gemini and Gemini-warmsite software provides a simple, secure and reliable way for our clients to back up their data offsite, ensuring the data that is integral to their organization's day to day operations is safely and easily maintained, in the event of a system crash or other disaster. Our Gemini-warmsite software and related services includes secure offsite backup, while the necessary hardware and communications equipment needed to run the clients' operations is housed in our data center facility, in a constant state of operational readiness.

Reseller Model

In order to move into new regions and states, we are pursuing a reseller model in those areas where it will be the most expedient way to introduce our primary software application. There are often information technology organizations established in an area that have sales staff in place to market our products.

Table of Contents

Lesson Planning Software

Product Acquisition

In September 2005, we acquired a standards based lesson planning software product, which we have renamed *curriculator* standards based lesson planner. The software product, potential customer list, install base and all related rights purchased did not constitute a material addition to the business. This software is designed to allow teachers to create lesson plans that are tied to a state's curriculum standards. These lesson plans may then be reviewed by school administrators and reports may be generated to determine the standards that have been met or need to be met. This is particularly important as school systems develop higher accountability standards. In addition, the federal No Child Left Behind Act legislation has focused greater attention on schools' adequate yearly progress (AYP) and meeting curriculum standards is an important component of these measurements. Standards based lesson planning software allows a school to document its compliance with the curriculum standards as a component of its compliance with the No Child Left Behind Act legislation.

Product Enhancement

We have rewritten the lesson planning software to be web-enabled. In addition, we are building in curriculum standards for all states.

Market Penetration

Addressing No Child Left Behind Act requirements and meeting state curriculum standards are issues for educators in every state. We plan to use telemarketing, our web presence, attendance at educational trade shows and direct mail campaigns to introduce and sell our lesson planning software nationally. Our initial efforts are focused on the southeastern states.

Technology

Expansion of Offerings

We are continually seeking new hardware offerings to present to our clients. Our spending on research and development is generally insignificant. As old technologies expire and new technologies emerge we work to stay a short distance behind the new product curve, adopting primarily those solutions that are proven in the marketplace. As a reseller with internal technical personnel and more than 400 public sector clients, we are periodically approached by vendors and manufacturers to expand into new territories or represent new or additional products. We also pursue these opportunities. For example, new product opportunities we evaluate could include additional products in the following market spaces in which we are already engaging: storage solutions, database technologies such as standardized data-tagging (XML or Extensible Mark-up Language) applications for improved data retrieval, internet based audio and video distribution (equipment used to broadcast audio and video communications), metropolitan wireless (city-wide wireless public internet access and city-wide wireless network access by city employees) and additional service capabilities. As with our other hardware-based solutions, we plan to enter into reseller arrangements with equipment and solutions providers or manufacturers who already have experience and can provide installation, support, equipment warranties and technical training to our personnel to offer additional solutions to our existing client base and new customers. Except for internally developed software or acquired products, we enter new areas as a reseller as opportunities arise and customer needs present themselves. This approach allows us to mitigate the risk of a product not having sufficient demand or profitability. By doing this, we forego the investment in inventory a manufacturer or large distributor would have to commit to a new product. We are already proposing solutions involving some of these areas, including metropolitan wireless networking for small towns and housing communities, although they do not yet represent a significant portion of our business. We typically do not commit significant resources to them unless we achieve reasonable profitability on the initial opportunities. Periodically, certain products introduced at a new client site, in response to a client's specific needs or requests and to maintain or improve the client relationship, never become a significant portion of our business. Other products become significant contributors to profitability and we add them as a standard offering to our client base.

Managed Services and Guaranteed Service Agreements

In addition to guaranteed service agreements on our software products, we will be offering guaranteed service agreements on many of our hardware offerings. Guaranteed service agreements allow us to increase our recurring revenue.

Geographic Expansion

We are pursuing a national presence with a primary, initial focus on the southeastern region of the United States.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Generally, our technology offerings require hands-on implementation and support. In order to expand into new geographic territories, we must find qualified personnel in an area to service our business. The need for hands-on implementation and support may also require investment in additional physical offices and other overhead. We believe our approach is conservative. Our strategy is to limit the number of new target areas until they become cash flow positive before expanding into additional ones. Accordingly, we intend to expand the geographic reach of our technology offerings from our primary client locations of South Carolina, North Carolina and Georgia to surrounding states methodically over time. The January 2007 acquisition of McAleer reflects this strategy of geographic expansion. Through McAleer, we have gained a presence in five states not previously served by CSI: Alabama, Mississippi, Louisiana, Tennessee and Florida.

Table of Contents

We may accelerate expansion if we find complementary businesses in other regions that we are able to acquire. Until such time as we are able to find appropriate acquisitions, our geographic reach for the technology solutions segment is likely to be limited to the southeast for the next several years. Our marketing efforts to expand into new territories may include telemarketing, attendance at trade shows, and direct mail in addition to personal contact.

We are able to deliver software applications, demonstrations and training over the internet and deliver support by internet or phone. Accordingly, for our software applications segment, we plan to expand our geographic reach to a national level more quickly than for our technology solutions segment. Software marketing efforts may include attendance at national trade shows and national telemarketing, direct mail and web advertising.

Growth Through Acquisitions

Our competitive markets are occupied by a number of competitors, many substantially larger than we, and with significantly greater geographic reach. We believe that to remain competitive, we need to take advantage of acquisition opportunities that arise which may help us achieve greater geographic presence and economies of scale. We may also utilize acquisitions, whenever appropriate, to expand our technological capabilities and product offerings. One significant reason for our entering into the merger and recapitalization transaction in February 2005 was to allow us to access public capital markets as a source of funding to permit us to grow through acquisitions. In addition, the merger transaction facilitated the sale of warrants, the exercise of which (absent a cashless exercise) represents a significant potential source of capital. While we may use a portion of any cash proceeds to pay down debt on an interim basis, we intend to use any additional liquidity and/or availability of assets generated by the paydown and remaining proceeds to fund acquisitions.

We believe our markets contain a number of attractive acquisition candidates. We foresee expanding through acquisitions of one or more of the following types of software and technology organizations:

Developers and resellers of complementary software, such as time and attendance, workflow management, tax appraisals and assessment, education, court and law enforcement related products.

Software companies with operations in the public educational and governmental market segments.

Consulting firms providing high level professional services. We believe this type of acquisition would enhance our offering of technology planning and project management.

Cabling and infrastructure contractors. We currently outsource cabling services.

Our business strategy provides that we will examine the potential acquisition of companies and businesses within our industry. In determining a suitable acquisition candidate, we will carefully analyze a target's potential to add to and complement our product mix, expand our existing revenue base, improve our margins, expand our geographic coverage, strengthen our management team and, above all, improve stockholder returns. More specifically, we have identified the criteria listed below, by which we evaluate potential acquisition targets in an effort to gain the synergies necessary for successful growth of the Company:

Access to new customers and new geographic markets

Protection of current customer base from competition

Removal or reduction of market entry barriers

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Opportunity to gain operating leverage and increased profit margins

Diversification of sales by customer and/or product

Improved vendor pricing from increased volume and/or existing vendor relationships

Improvements in product/service offerings

Protection of and ability to expand mature product lines

Ability to attract public capital and increased investor interest

We are unable to predict the nature, size or timing of any acquisition. We can give no assurance that we will reach agreement or procure the financial resources necessary to fund any acquisition, or that we will be able to successfully integrate or improve returns as a result of any such acquisition.

In accordance with this strategy, we have pursued and entered into preliminary discussions with various acquisition candidates. In June of 2006, we approached an Alabama corporation, McAleer Computer Associates, Inc., as to a potential acquisition. Following due diligence and negotiations with McAleer, and after analyzing its ability to further our expressed strategy, we purchased substantially all of its assets and business operations on January 2, 2007. Details of the acquisition are set forth below in I. McAleer Acquisition.

We continue to seek out and hold preliminary discussions with various acquisition candidates. However, except for the McAleer acquisition described above, we have not entered into any agreements or understandings for any acquisitions that management deems material.

Table of Contents

I. McAleer Acquisition

Summary of Transaction

On January 2, 2007, we consummated the purchase of substantially all of the assets and business operations of McAleer Computer Associates. The terms and conditions governing this acquisition were set forth in an agreement dated November 27, 2006. The total purchase price was \$4,050,000. We did not assume any liabilities of McAleer, other than certain leases and obligations of McAleer under ongoing customer contracts. We are operating the acquired business as a division of the Company under the name CSI McAleer Technology Outfitters, and retain the business location in Mobile, Alabama.

About McAleer Computer Associates, Inc.

McAleer was primarily a provider of financial management software to the education K-12 market. In operation for over twenty-five years, its current footprint included installations in Alabama, Georgia, Mississippi, Louisiana, Tennessee and Florida. The addition of McAleer allows us to expand our reach from the primary three-state market where we were doing business prior to the acquisition to an eight-state footprint throughout the Southeast. We believe the acquisition constituted a significant move in implementing our stated strategy of geographic expansion, with an ultimate goal of achieving a national presence.

William J. McAleer was the sole shareholder and founder of McAleer, and until approximately four years ago he managed its day-to-day operations. Since that time, the operations have been managed by Jeffrey Mackin, who continues to lead the Mobile operations as a part of CSI following the acquisition. We believe McAleer has a reputation for delivering quality customer service. We are utilizing McAleer staff to continue to service its existing clients. We have been able to capitalize on the Mobile location to market expanded technology and service offerings to the broader geographic area and have secured clients for CSI-Easley in the local government (city and county) markets within the added geographic footprint. In contrast to CSI, McAleer has not historically focused on the local government market or provided as broad a range of technology solutions.

McAleer Revenues

The majority of McAleer's revenues are related to the licensing and annual support agreements for its fund accounting software, with a smaller amount (approximately 10% to 15%) related to hardware. Hardware revenues include servers sold for the software to run on, and other indirectly related products and services. Accordingly, we will report the majority of McAleer's software and related services through our Software applications segment. A small amount of revenues may be recorded through our Technology solutions segment, consistent with our practices prior to the McAleer acquisition.

McAleer is in the process of upgrading approximately 60% of its customers to the latest major release of the McAleer fund accounting system. These increases provide additional revenue due to the increased pricing structure to reflect the enhancements in the latest major release. Accordingly, while not estimable, we anticipate an ongoing improvement in our recurring revenues through this upgrade process.

With increasing recurring revenues from the McAleer software business, we anticipate increased revenues and profitability from the McAleer addition. We see opportunity for additional increases in revenues from our efforts to sell our fund accounting product to the government market space and a wider variety of technology offerings in the expanded geographic footprint. McAleer has not historically sold to the government market or offer technology products and services. However, we cannot predict the impact these efforts will have on our financial results.

For more detailed financial information with respect to McAleer and the acquisition, see the pro forma financial information for the year ended December 31, 2006 included in Note 2, McAleer Acquisition to our consolidated financial statements dated December 31, 2007.

History of Negotiations for Acquisition

CSI and McAleer have been competitors in the education K-12 market for several years, particularly in Georgia. Both companies have had a healthy respect for each other's products, staff, customer service and market penetration. CSI approached McAleer in June of 2006 to discuss the possibility of a partnering arrangement to market the following: (1) CSI technology solutions to McAleer's K-12 client base and (2) CSI financial management solutions to the local government sector in McAleer's geographic footprint. The discussions evolved from a partnership arrangement to an acquisition arrangement due in large part to Mr. McAleer's desire for an exit strategy and the belief that a combined entity would create a very strong financial management player in the southeastern United States.

Terms of the Acquisition

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

The terms and conditions of the acquisition are set forth in an asset purchase agreement (Agreement), which CSI, McAleer, and Mr. McAleer entered into on November 27, 2006. The assets acquired included real estate; furniture, fixtures and equipment; software

Table of Contents

rights, including source codes; hardware; technical information and materials; intellectual property; business records; customer lists and information; goodwill and McAleer's corporate name; and certain work in progress. The transfer of assets was further evidenced in a Bill of Sale from McAleer to the Company dated January 2, 2007, as well as an Assignment and Assumption Agreement between the Company and McAleer dated January 2, 2007. CSI assumed no liabilities of McAleer, other than certain leases and obligations of McAleer under ongoing customer contracts.

The total purchase price was \$4,050,000, of which \$3,525,000 was paid in cash at closing. The balance of \$525,000 was originally paid at closing via a Promissory Note of like amount to be paid in twenty quarterly installments of principal in the amount of \$26,250, plus interest in arrears at the LIBOR rate, beginning March 31, 2007. The Company's obligations under this Promissory Note were secured by a first mortgage on the real property of McAleer conveyed in the acquisition, consisting of an office building located in Mobile, Alabama. This Mortgage was given by the Company to BILLYMC, Inc. (formerly known as McAleer) and was dated January 2, 2007. In February 2006, the BILLYMC Promissory Note was refunded by a \$486,000 mortgage loan from our bank lender. The real estate transfer was evidenced by a Warranty Deed from McAleer dated January 2, 2007. Pursuant to the terms of a letter of intent between the Company and McAleer, and pursuant to the Agreement, the Company made a payment of \$100,000 as earnest money at the time of signing the letter of intent, which deposit was applied to the purchase price at closing. McAleer agreed that it would pay all of its outstanding liabilities promptly, except for those limited obligations we assumed.

Under the Agreement's indemnification provisions, we agreed to indemnify McAleer and Mr. McAleer against loss resulting from any breach of our representations or covenants made in the Agreement (such covenants to perform before or after the closing), any liability we assumed under the Agreement, and any liability of ours relating to our business operations after the closing, so long as we receive written notice of any such claim within eighteen months after the closing date.

McAleer and Mr. McAleer agreed to indemnify us against loss resulting from any breach of their representations or covenants made in the Agreement (such covenants to perform before or after the closing), any liability not assumed by us under the Agreement, and any liability relating to McAleer's business prior to the closing. We must provide written notice of any claim for loss resulting from a breach of representations or warranties, or from a breach of a covenant, contained in the Agreement or in any other document signed at the closing within eighteen months after the closing date, except for representations relating to the title to the assets being acquired, the organization of McAleer, the nature and extent of McAleer's intellectual property, and warranty claims against McAleer (these excepted claims have no time limitation, but are subject only to the applicable statute of limitations). All other claims for indemnification do not have any time limitation, but are subject only to the applicable statute of limitations. Finally, McAleer and Mr. McAleer are not responsible to indemnify us for any losses until the amount has reached \$25,000, nor are they responsible for any losses in excess of \$2,000,000. This limitation, however, does not apply to third party claims or to claims for breach of representations relating to the title to the assets being acquired, the organization of McAleer, the nature and extent of McAleer's intellectual property, and warranty claims against McAleer.

Pursuant to the Agreement, McAleer and Mr. McAleer entered into a Confidentiality, Noncompetition and Nonsolicitation Agreement (Noncompetition Agreement). In such agreement, McAleer and Mr. McAleer agreed generally to refrain from disclosing any trade secrets or other confidential information relating to McAleer's business operations, to refrain from competing for five years within a specific geographic area and for one year to refrain from soliciting or employing any former employees of McAleer. Pursuant to the terms of the Noncompetition Agreement, the Company paid to each of McAleer and Mr. McAleer \$5,000.

In accordance with the terms of the Agreement, we also entered into a Consulting Agreement with Mr. McAleer dated December 2, 2006. Under the terms of the Consulting Agreement, Mr. McAleer will advise us on various aspects of McAleer as we may request, including marketing, sales, production activities, and customer relations. Mr. McAleer will be paid \$75 per hour, plus expenses, for his services. The initial term of the Consulting Agreement expired on December 31, 2007 and was not renewed.

The closing of this acquisition occurred on January 2, 2007, with an effective date of January 1, 2007. We funded the acquisition in part with advances under our credit facilities with RBC Centura Bank. We also utilized approximately \$1.3 million in cash from McAleer. Pursuant to the Agreement, service contract revenue with respect to 2007 that McAleer received in 2006 was segregated for our account.

J. Sales, Marketing and Distribution

We market our products and services through direct sales throughout North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Tennessee and Florida. We have been expanding our direct sales to cover the larger southeastern United States region. Our inside sales staff provides lead generation and support to the direct sales team.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

We have twelve outside sales persons, including a Senior Vice-President of Strategic Relationships, a Vice President of Sales and a Chief Technology Officer, and six additional employees on our inside sales staff. In line with our expansion plans described above under H. Strategy, we plan to expand both of these teams further as we expand our geographic presence. Other employees are involved in selling on a daily basis. Engineers and trainers have excellent opportunities to sell additional products and services to clients while delivering services.

Table of Contents

Our marketing efforts include participation in various trade shows (for municipalities, counties and education), road shows to showcase various products and services, and mailings to target specific products and services.

Our inside sales staff provides leads to the outside staff and also produces proposals to be delivered to prospects and clients. In 2004, the software inside sales staff began making outbound calls to pre-qualify leads for the outside sales staff. This has proven successful and we intend to expand these calls during 2008 through the use of telesales personnel.

Our outside sales personnel call on existing and prospective clients. Owing to our wide range of product and service offerings and rapidly changing technology, we believe there are sales opportunities within the existing client base. Recurring sales account for a significant part of our overall revenue. Our sales teams are segmented by geography and also product segments (technology and software). Depending on the product or service being offered, we may call upon an information technology director, city manager, director of finance, director of operations, utility manager or curriculum coordinator.

In 2006 we reorganized our sales force, with representatives selling both software and technology. The purpose of this reorganization was to take advantage of cross-sell opportunities within customer accounts. Previously, our sales personnel had focused on selling either software or technology. While the reorganization was not entirely ineffective, we found that our sales personnel gravitated to either software or technology. Moreover, our market analysis confirmed that fewer personnel in a geographic area are needed to sell software than technology products and services. Accordingly, market expansion for software sales can be effected more quickly than for technology. Therefore, we found it beneficial to maintain separate sales forces for software and technology. We will continue to encourage our sales personnel to cross-sell all of our products and services, emphasizing our ability to handle all of a client's needs. We re-implemented a segmented sales approach in 2007, and are continuing with that approach for the foreseeable future.

K. Key Suppliers

Our relationship with Promethean is established through a reseller agreement, under which we are able to sell interactive whiteboard products on an exclusive basis in two states, South Carolina and North Carolina. In early 2008, we entered into an affiliate relationship with another vendor, providing us the opportunity to sell Promethean products in certain counties in the state of Alabama. Both the exclusive reseller agreements and the affiliate agreement provide us with the ability to sell Promethean products into these markets, as well as additional opportunities to sell our related project management and technical services. Sales of Promethean products represented approximately 51% of sales revenues in 2007 and 23% in 2006.

On January 2, 2008, CSI and Logical Choice Technologies, Inc. (Logical Choice) entered into a Reseller Agreement dated to be effective October 18, 2007. The Reseller Agreement evidences an affiliate arrangement between CSI and Logical Choice, whereby CSI has been granted the right to sell Promethean and AudioGear products in 33 counties in central and southwestern Alabama. The term of the arrangement is one year, subject to renewal and termination for convenience upon 30-days advance written notice. The agreement also requires CSI to promote and sell only AudioGear-branded audio solutions from Logical Choice in Alabama.

One January 8, 2008, CSI was re-certified as a Cisco Premier certified partner pursuant to an Indirect Channel Partner Agreement between the Company and Cisco Systems, Inc. The re-certification is effective through March 26, 2009. The agreement grants us a limited, nonexclusive, revocable license to receive from authorized distributors and distribute to end users both those Cisco products made available to the authorized distributors and Cisco's proprietary rights in those products. The prices we pay for the Cisco products are set by the authorized distributors. In 2007, sales of Cisco products accounted for 12% of our sales revenue. In 2006, that number was 19%.

Pursuant to a Hewlett Packard U.S. Business Development Partner Agreement, we were appointed a Business Development Partner for the purchase and resale or sublicense of Hewlett Packard's products, services and support. In this capacity, we will purchase Hewlett Packard's products, services and support from authorized distributors and resell them to end users. The agreement was originally effective until May 31, 2005, and we received notification that it has been extended in its current form until June 30, 2007. On November 8, 2007, the Company was notified electronically that the agreement had been renewed through May 31, 2009. We purchase products both through HP and through authorized distributors. We also assist our customers in placing orders directly with HP when we act as a sales agent and customer representative. In such cases we record no revenue except for commissions received on the sales. Sales of Hewlett Packard products accounted for 4% of sales revenues in 2007 and 21% in 2006. In addition, we received commissions on customer orders of Hewlett Packard products of \$753,971 (1% of 2007 gross sales) in 2007 and \$808,486 (3% of 2006 gross sales) in 2006.

L. Customers

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Our customers are predominantly educational institutions (K-12 and higher education), municipalities, non-profit organizations and other local governments. We sold services and products to more than 700 customers during 2007. Fifteen customers constituted approximately 50% of the 2007 gross revenues, but no customer constituted more than 20% of gross revenues. Two of our customers combined accounted for at least 28% of our revenues, the Greenville County, South Carolina school district and the Pickens County, South Carolina school district. Due to the nature of the large technology projects we install, it is not unusual for a relatively small number of customers to account for the majority of sales. It is not unusual for customers to have ongoing projects extending across several years.

Table of Contents

2007 Revenues by Market Type		2007 Revenues by State	
Sector	%	State	%
Private	1	Alabama	7
Public Education	91	Georgia	7
Public Government	8	North Carolina	18
		South Carolina	66
		Other	2

M. Competition

The market for the services that we provide is highly competitive, includes a large number of competitors, and is subject to rapid change. Our primary competitors include participants from a variety of market segments, including publicly and privately held firms, systems and consulting and implementation firms, application software firms and service groups of computer equipment companies. Competition is generally based on quality of products and customer support, timeliness, cost of services, relevant targeted expertise and return on investment.

In the fund accounting software market, there are a handful of national companies and many regional companies that have carved a niche in their region much as CSI has done in the southeast. On a national level these include divisions of Tyler Technologies, particularly MUNIS and INCODE, and divisions of Sungard Data Systems, Sungard Bi-Tech and Sungard Pentamation.

The hardware and technology services market tends to have more regional rather than national competitors. In some cases hardware vendors, such as Hewlett Packard, offer engineering services that are in direct competition with our engineering services. On a national level, Pomeroy IT Solutions is the primary competitor in the IT products and services market.

We were recognized by VAR Business Magazine as one of the top 500 network integration companies in the United States (the VAR Business 500) in 2004, 2005, 2006 and 2007. Additionally, in 2005, we were one of three finalists for the Educational Solution Provider of the Year award also presented by VAR Business Magazine.

There is a disadvantage to this recognition in that we are now highly visible as potential competition for those with whom we compete for business. Virtually all of the companies listed on the VAR Business 500 and Government VAR 100 are competitors or potential competitors of ours. The VAR Business 500 and Government VAR 100 lists include IBM Global Services, EDS, Lockheed Martin IT, Accenture and Computer Sciences, to name a few. Most of the companies are significantly larger than we are, and some may enter our market space should they choose to do so. While we believe we will be able to continue to compete effectively in the future, there is no guarantee we will be able to do so or achieve any future recognition.

As CSI begins to market our products and services nationally, we will continue to compete with the same national companies and will be faced with additional regional competitors in the new markets we enter.

We believe a primary strategic advantage of CSI is combining the sale of our fund accounting software with network integration and hardware sales and services. We believe that providing one-stop shopping with a single point of contact is a material benefit to our clients and that this has been a key factor in our successful penetration of the educational and governmental software and technology markets in South Carolina, North Carolina and Georgia. Although competitors exist in these markets, we believe very few organizations offer the blend of services and products that is available through CSI. We are expanding into surrounding states with the goal of leveraging this strategic advantage in new areas.

Customer Service

Our historical growth has been, in large part, due to the high level of repeat business from our existing client base. This is evidenced by a greater than 90% client retention rate by our software applications segment and significant recurring sales opportunities to this client base through our Technology solutions segment. We believe clients continue to utilize our products and services due to our focus on customer service, attention to detail and regular follow-up. We strive to have technical and customer service staff members available to address swiftly the needs, questions or concerns of clients. Specifically, our software customer service includes user conferences, a support desk access and a website, which offers documentation and downloadable upgrades.

Table of Contents

Ability to Carry Out a Broad Range of Projects of Varying Scope

We strive to be agile and adaptable in fulfilling the technology needs of our clients, traits which are instilled in our corporate culture. We have managed multi-million dollar, multi-year projects for our clients, as well as requests for projects of a much smaller scale. We believe that our clients appreciate our range and flexibility in meeting their technology requirements.

Long-term Relationships with Clients

A large percentage of revenue continues to flow from our existing client base. The preservation of these client relationships is a high priority of our management team. We believe the longevity of these relationships evidences a high degree of customer satisfaction.

Seamless Implementation of Software and Hardware

Because of our dual capabilities with respect to providing both software and integration services, we believe that we are able to coordinate the implementation of software and hardware, minimizing disruption to our clients' day-to-day operations.

Diversification of Products and Service

Our products and services can address the needs of many departments within a city, county or educational facility. We offer a wide variety of services and products, including financial software, workflow management solutions, network integration products and services, specialized classroom technologies, IP telephony and IP surveillance, distance learning technology and wireless solutions.

N. Intellectual Property

We develop new software as part of our business activities. The software products we develop are generally works made for hire, prepared by our employees within the scope of their employment and with copyright ownership vesting in the Company pursuant to the Copyright Act of 1976. We routinely license software to our customers through unwritten, implied nonexclusive licenses, the terms of which are commensurate with our copyright protection in the software. Licenses for our products are ordinarily on a site license or user-based license basis. Generally, implied licenses are created by law when an express, written agreement does not exist between the parties. An implied license provides certain rights to the licensee, and typically such rights would be those the copyright owner would have given to the licensee as customarily given in the industry for similar types of software products. Other than password protection of the software for preventing unauthorized access to the software and/or the Company receiving actual knowledge of a violation of its licenses, we have no formal methods in place for monitoring compliance with our licenses. Our software is generally entitled to receive copyright protection automatically, by operation of law, upon its creation. Copyright protection provides protection against unauthorized copies and derivative versions of the software being made. Copyright protection may also provide protection against the unauthorized distribution, public performance and display of the software. We typically do not assign our copyrights in our software to our customers. We have not, however, pursued registration of copyrights for our software under the Copyright Act nor have we pursued obtaining patents on the software we develop.

The length of such implied licenses of our software is generally coextensive with the length of the applicable copyright term provided for by federal law. Currently, the term for copyright protection is the life of the author of the software, plus 70 years. For software works that are made for hire (as defined by the Copyright Act), the length of the copyright term is 95 years from the first publication.

Enforcement of the implied licenses on our software would be primarily on copyright infringement grounds and/or on common law principles pertaining to implied licenses. Violations of copyrights on our software could include, among other things, unauthorized distribution of our software, and unauthorized derivative works being made of our software (such as by reverse engineering), each of the foregoing being rights uniquely held by the copyright owner.

O. Software Development

In 2007, we spent and capitalized \$1,058,070 on software development. In 2006, we spent and capitalized \$1,156,307. Our software development efforts focus on the implementation of known technological capabilities applied to common business processes to enhance our existing products. Historically, we have spent no material efforts on technological innovation for which the feasibility has been unknown. These software development amounts were accounted for as deferred software development costs and are amortized over the economic life of the related product (generally three years).

P. Government Regulations

Procurement Regulations

We are subject to certain laws, regulations, policies and procedures governing the procurement by local governmental units of goods and services generally. These vary by jurisdiction, and there is a wide variance in the policies and procedures with which we must comply among our clients. For example, some governmental units require that we strictly comply with a request for proposal, some of our projects are subject to bid, and in others, the official handling procurement has considerable discretion. We have integrated

Table of Contents

compliance with these governmental procurement requirements into our sales process. As a result, the sales cycle associated with our products tends to be complex and lengthy. Factors contributing to the length and complexity of the sales cycle are the potential need to provide written responses to product demonstrations, customizing software to meet a particular customer's needs and the integration of our products with third party products.

Also, the governmental entities that comprise our customer base generally have the ability to terminate a contract for convenience, typically on a year-to-year basis. This right could adversely impact us, particularly in the case of technology solution projects we may be performing or ongoing service agreements that we may have in place. Although the potential for termination of a governmental customer for convenience exists, we have never had a customer terminate a contract in this manner.

Impact of Regulations on Maintenance of our Software

With respect to our software products, compliance with existing and future government regulations is a potential cost to CSI. Upon certain changes in law, we may be required to review the construction and content of our software to determine what impact, if any, the changes will have on the underlying rules tables in, and the operation of, our software. For example, our CSI Accounting+Plus system has to be modified as the federal and state governments change reporting requirements. Modifications for Form W-2, Form 1099, various health and retirement reporting and payroll tax table updates are a few examples of the changes that may need to be made.

If a regulatory change does impact our software, modification will need to be made at a cost and burden to CSI. In an extreme case, the software may be required to be rewritten entirely. This cost may potentially be passed on to customers in the form of product updates and product service agreements, but in certain circumstances the costs will be absorbed by us entirely. For example, if we have a support agreement with a customer for a software product serviced, but no longer sold, by CSI, then our cost for updating the software may not be fully recoverable from the customer, but instead may be limited by the terms of the support agreement.

Federal E-Rate Program

Because we participate in the federal E-Rate Program, we are subject to the rules and regulations of that program. These rules and regulations are continually reviewed and modified and we must stay current with these changes. The risk factor entitled *A significant portion of our revenue stems from sales to schools receiving funding through the E-Rate Program. A loss of such funding could have a material adverse impact on our revenues and financial condition,* contains additional information about the E-Rate program. Approximately 3% and 8% of our 2007 and 2006 revenues, respectively, were generated from the E-Rate program. The Company and its customers compete for federal funds with many other entities and projects. As a result the revenue we receive from the federal E-Rate Program can be volatile.

Q. Employees

As of December 31, 2007, we had 185 full-time employees and five part-time employees. Our relationship with our employees is good. Many employees have worked at CSI for more than five years, some more than ten years. Full-time staff are assigned to the following areas:

Technical/Support Services/Training	56
Software Product Development	26
Engineering Services/Project Management	44
Sales/Sales Support	38
Administration/Finance	21
	185

Item 1A. Risk Factors.**Risk Factors Relating to Our Company**

Our customers are predominantly educational institutions, municipalities, non-profit organizations, and other local governments. Negative trends in governmental spending patterns or failure to appropriate funds for our contracts, whether due to budgetary constraints or otherwise, may have an adverse impact on sales revenues.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Approximately 95% of our revenues are generated from sales of software, hardware and services to county and city governments and school districts. We expect that sales to public sector customers will continue to account for substantially all of our revenues in the future. Many of these contracts are subject to annual review and renewal by the local governments, and may be terminated at any time on short notice. Our dependence on county and city governments and school districts for the sales of our products and services renders our revenue position particularly susceptible to downturns in revenues as a result of changes in governmental spending patterns and the contract award process.

Table of Contents

Because we must comply with governmental procurement regulations and undergo governmental approval processes, the sales cycle associated with our products is typically complex and lengthy. This puts us at risk of having to incur significant sales expenses with no assurance that a sale will be consummated and revenues received. Future regulations could increase the magnitude of this risk.

For each contract with a public sector customer, we are typically subject to a procurement process, which can include a competitive bid process and governmental acceptance reviews. The process is often onerous and can include a detailed written response addressing, among other things, the design of software that addresses customer-specified needs, the integration of our products with third-party products and product demonstrations. Future laws and regulations could increase the demands and costs of this process. There is a risk that we could expend significant funds and management resources in complying with the procurement and governmental review rules, only to ultimately fail to close the sale. The procurement process can also be subject to political influences, award protests initiated by unsuccessful bidders and changes in budgets or appropriations which are beyond our control. Reacting or responding to any such influences or protests may involve considerable expense and delay, and may result in termination, reduction or modification of the awarded contract. Our failure to consummate sales after incurring significant expenses to comply with lengthy procurement processes would reduce our profitability and adversely affect our financial condition.

Changes in governmental procurement regulations may increase our costs, and non-compliance could negatively impact our ability to compete.

Government organizations require compliance with various legal and other special considerations in the procurement process. The adoption of new or modified procurement regulations could harm us by increasing the costs of competing for sales or by impacting our ability to perform government contracts. Any violation, intentional or otherwise, of these regulations could result in fines and/or debarment from award of additional government contracts, which could negatively affect our profitability and harm our business reputation.

Compliance with procurement processes and regulations may require us to disclose trade secrets or other confidential business information, which may place us at a competitive disadvantage.

We may, depending on the particular procurement, be required to disclose trade secrets and commercially sensitive information to the governmental entity making the procurement in order to place a bid or respond to a request for proposal. While mechanisms may be in place for protecting such information, disclosure could occur through a Freedom of Information Act release, thereby potentially compromising our confidential information.

Governmental contracts may contain terms not contained in typical private sector sales contracts that may be unfavorable to us. These terms may have the effect of raising our compliance costs or interrupting our revenue stream, either or both of which could negatively impact our income position.

Governmental contracts may contain terms that could adversely impact our sales revenues or increase our costs of doing business. Such terms may include profit limitations and rights of a particular governmental agency to terminate a contract for convenience or if funds are unavailable. We have never had a customer terminate a contract in this manner, although we can give no assurances this will not occur in the future. Also, in some cases we may be subject to liquidated damages for defective products and/or delays or interruptions caused by systems failures. Payments under some public sector contracts are subject to achieving implementation milestones and we could in the future have differences with customers as to whether milestones have been achieved.

Modifying our software products to comply with existing and future governmental regulations may increase our operating costs and have a negative impact on our profitability.

From time to time, it may be necessary to revise and update our software products to comply with changes in laws relating to the subject matter with which our software deals. For example, we may have to revise our fund accounting software to comply with changes in reporting requirements. Examples of such changes include modifications for Form W-2, Form 1099 and various health and retirement reporting and payroll tax table updates. The extent of any required revisions will depend upon the nature of the change in law. It is possible that in some cases, the costs of compliance may be passed on to the customer, but in other cases, we may be forced to absorb some or all of the costs. Any absorption of compliance costs would have an adverse impact on profits.

Most of our maintenance agreements are for a term of one year. If our customers do not renew their annual maintenance and support agreements for our products and services, or if they do not renew them on terms that are favorable to us, the reduction in revenues would have an adverse impact on our financial condition.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

As the end of the term of a maintenance agreement approaches, we seek to renew the agreement with the customer. Maintenance agreements represented 10% of our total revenue for the 2007 fiscal year and 9% of our total revenue for the 2006 fiscal year. Due to this characteristic of our business, if our customers chose not to renew their maintenance and support agreements with us on terms beneficial to us, our business, operating results and financial condition could be harmed.

Table of Contents

We derive a material portion of our revenue from the sale of our fund accounting software. We believe that the use by our customers of our software also gives us a competitive advantage in our providing system integration services, including the sale of hardware, to these customers. Reduced acceptance of our fund accounting software and upgrades of such software could have a direct and indirect adverse impact on our revenues.

We derive a material amount of our revenue from the sale of our fund accounting software and related services, and revenue from this product line and related services is expected to remain a material component of our revenue for the foreseeable future. For the 2007 and 2006 fiscal years, software sales and related revenues for fund accounting software accounted for approximately 8.9% and 6.8% of our total revenues, respectively. We generally grant non-exclusive licenses to our products on a perpetual basis and deliver new versions and enhancements to customers who purchase annual maintenance and support. We also provide our software under rental arrangements, including ASP (Application Service Provider or CSI hosted) type models. As a result, our future license, services and maintenance revenue are substantially dependent on sales to new customers. In addition, if demand for our fund accounting software declines, we believe we would lose a competitive advantage in providing system integration services, and our technology segment revenues could also decline.

We encounter long sales cycles, particularly for our largest customers, which could have an adverse effect on the amount, timing and predictability of our revenue and sales.

Potential customers, particularly large clients, generally commit significant resources to an evaluation of available software and require us to expend substantial time, effort and money educating them as to the value of our software and services. Sales of our core software products to these larger customers often require an extensive education and marketing effort.

We could expend significant funds and management resources during the sales cycle and ultimately fail to close the sale. Our core software product sales cycle averages approximately six to twelve months. Our sales cycle for all of our products and services is subject to significant risks and delays over which we have little or no control, including:

- our customers' budgetary constraints;

- the timing of our clients' budget cycles and approval processes;

- our clients' willingness to replace their current methods or software solutions;

- our need to educate potential customers about the uses and benefits of our products and services;

- the timing and expiration of our clients' current outsourcing agreements for similar services; and

- the governmental procurement risk described elsewhere in Risk Factors.

If we are unsuccessful in closing sales after expending significant funds and management resources or if we experience delays as discussed above, it could have a material adverse effect on the size, timing and predictability of our revenue.

We are dependent on strategic relationships with our vendors, and our business would be materially and adversely affected if we were to lose our existing, or fail to gain additional, strategic relationships.

The segment of our business that includes hardware sales and related support services is dependent upon the strong relationships that have been established with our vendors. We purchase equipment from these vendors and add our engineering services to provide a total solution to the customer. Without the vendor products, we would lose the margin on the hardware sale as well as the margin provided by our engineering services.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

These relationships could be terminated if we fail to:

maintain adequate certified systems engineers (computer professionals who have passed a test indicating specialized knowledge in the design, planning and implementation of specific computer-based technology) and staff that can implement and support the vendors' products;

receive satisfactory feedback from our customers; or

pay for purchased equipment and services on a timely basis.

Table of Contents

The constant rate of new developments in technology can significantly impact demand. The introduction of new technology by us, our competition or suppliers could defer customer purchases, and large swings in demand for new technology could impact the ability of our suppliers to deliver the technology products we sell, or for us to install the software solutions we develop. The deferral of customer purchase decisions, or the inability of our suppliers or us to meet demand on a timely basis due to the introduction of new technology, could negatively impact our profitability. Conversely, our ability to access new technology timely or develop innovative solutions could improve revenues and profitability.

Manufactured hardware products are the most significant volume of revenues reported in our business. They also contribute significantly to our profitability reported through our Technology solutions segment. We are constantly pursuing new technology to add to our portfolio of offerings.

When improved technology is announced but not yet available, customers may defer their purchases until such new technology is available. Such deferral could delay revenues and negatively impact our profitability.

Also, when improved technology is introduced suppliers are frequently unable to supply or deliver and install products in quantities sufficient to meet initial demand. This can also result in a rationing of deliveries.

If our suppliers deliver products to our competition in lieu of, or at a reduced rate of delivery to us, or if we are unable to deliver our products timely, our customers could pursue purchasing from other sources. This could negatively impact our revenue and profitability.

Even in the event that our customers could not find the product elsewhere, a delay in delivery could result in a deferral of our revenues to future periods and lost profitability in the near term. We may be unable to recover such lost profits.

The introduction of new technology by a competitor or by us could also cause a change in customer purchase habits, or defer or eliminate customer purchases of currently available products developed by us or then available from our suppliers.

Management has not seen any impact from these factors resulting in a substantial downturn in buying patterns, but cannot guarantee that a downturn due to such factors will not occur in the future. Management believes delay in supply or postponement by customers of delivery has, from time to time, deferred as much as 10% to 15% of reported annual revenues between quarters. However, it is impossible for us to quantify the total impact on historically reported results due to these factors; nor can we predict the future potential impact, if any.

Our failure to compete successfully could cause our revenue or market share to decline.

Our market is fragmented, competitive and rapidly evolving, and there are limited barriers to entry for some aspects of this market. Our Software applications segment has three primary sources of competition:

software developers offering integrated specialized products designed to address specific needs of governmental organizations;

custom-developed products created either internally or outsourced to custom service providers; and

software developers offering general products not designed to address specific needs of governmental organizations.

Our Technology solutions segment is subject to competition by both regional and national technology solutions providers, including those listed by VAR Business Magazine as the top 500 network integration companies in the United States.

The companies with which we compete, and other potential competitors, may have greater financial, technical and marketing resources and generate greater revenue and better name recognition than we do. If one or more of our competitors or potential competitors were to merge or form a strategic relationship with another of our competitors, the change in the competitive landscape could adversely affect our ability to compete effectively. For example, a large diversified software enterprise, such as Microsoft, Oracle or PeopleSoft, could decide to enter the market directly, including through acquisitions. Also, in the same manner, large hardware and technology solutions providers, such as IBM Global Services, EDS and Lockheed Martin IT could negatively impact our ability to compete in the technology solutions market.

Loss of significant clients could hurt our business by reducing our revenues and profitability.

Our success depends substantially upon retaining our significant clients. Generally, we may lose clients due to conversion to a competing service provider. We cannot guarantee that we will be able to retain long-term relationships or secure renewals of short-term relationships with our significant clients in the future. Our top ten clients constituted approximately 46% and 42% of our revenue for the 2007 and 2006 fiscal years, respectively. The loss of a significant portion or all of these clients would have a material adverse effect on our profitability and financial condition.

Table of Contents

We face a number of obstacles in implementing our strategic expansion into new geographic markets. Overcoming these obstacles will require an expenditure of material financial resources and significant efforts by management and other employees. Our failure to succeed in our efforts to penetrate new markets in a timely fashion could adversely affect our profits and margins and our revenue growth.

As we move forward with our growth strategy, we anticipate expanding into new geographic regions. We have achieved the most significant penetration in South Carolina, North Carolina, Georgia and Alabama. We continue our efforts related to moving into surrounding states. While expanding geographic markets provides a good opportunity to extend existing customer bases and increase revenue, breaking into a new market can prove difficult. There are obstacles to successfully entering new geographic markets, including limited market knowledge and relationships, little brand awareness, no established sales presence or regional client references. We anticipate that initial penetration will be slow but will accelerate over time. We cannot accurately predict the time required to build customer relationships, the rate at which new market penetration can be accomplished, or the costs necessary to expand.

To support the expansion process we plan to hire additional sales personnel to help penetrate new geographic regions, which could represent a \$200,000 to \$300,000 investment. While management believes this is a prudent investment, there may be an initial short-term negative impact on earnings. Due to the length of our typical software sales closing cycle, six to twelve months, coupled with the obstacles to market penetration discussed above, we cannot predict how long it will take for us to recover these costs.

We may not be able to manage our future growth efficiently or profitably. Increased demands on our human resources and infrastructure due to planned expansion, if not accompanied by increases in revenues, could negatively impact our profitability.

We have experienced significant personnel and infrastructure growth since our inception, and are continuing this expansion to address potential market opportunities. For example, we are expanding the size of our outside and inside sales staff, strengthening our telesales department and increasing our marketing and product development efforts to support a broader geographic reach and expanded product offerings. If these increases in personnel do not produce the intended growth in revenues, there can be no assurance that we will maintain profitability. Additionally, an increase in revenues will result in increased demands on our maintenance and support services professionals in order to maintain service quality. If we are unable to address sufficiently these additional demands on our personnel, operations, systems, procedures and resources, our profitability and growth might suffer.

In conjunction with the addition of a telesales department, we established a call center to broaden our support offerings for technology hardware sold, including IP telephony products. Establishment of the call center required a large up-front investment. We hope that having an established call center dedicated to the support of technology products sold will facilitate an increase in sales of service contracts in connection with equipment sales and in turn, increase our sales revenue. Additionally, we hope that the establishment of a centralized call center will increase our efficiency in responding to customer service issues by increasing the amount of support provided remotely, improving response time, and reducing the need to divert engineers in the field from other projects. Failure to realize increased sales revenues and increased efficiency, combined with the cost to establish a call center, would have a negative impact on our profitability.

Because competition for highly qualified personnel is intense, we may not be able to attract and retain the employees we need to support our planned growth.

To execute our plans for continuing growth, we will need to increase the size, and maintain the quality of, our sales force, software development staff and our professional services organization. To meet our objectives, we must attract and retain highly qualified personnel with specialized skill sets focused on the educational and local government market. Competition for qualified personnel can be intense, and we might not be successful in attracting and retaining them. The pool of qualified personnel with experience working with or selling to nonprofit organizations is limited overall and specifically in Easley, South Carolina, where our principal office is located. Our ability to maintain and expand our sales, product development and professional services teams will depend on our ability to recruit, train and retain top quality people with advanced skills who understand selling to, and the specific needs of, educational institutions and local governments. For these reasons, we have from time to time in the past experienced, and we expect to continue to experience in the future, difficulty in hiring and retaining highly skilled employees with appropriate qualifications for our business. In addition, it takes time for our new sales and services personnel to become productive, particularly with respect to obtaining and supporting major customer accounts. In particular, we plan to continue to increase the number of services personnel to attempt to meet the needs of our customers and potential new customers. In addition to hiring services personnel to meet our needs, we might also engage additional third-party consultants as contractors, which could have a negative impact on our earnings. If we are unable to hire or retain qualified personnel, if newly hired personnel fail to develop the necessary skills or if they reach productivity slower than anticipated, it would be more difficult for us to sell our products and services. As a result, we could experience a shortfall in revenue or earnings, and not achieve our planned growth.

Table of Contents

As a result of the relatively low margins associated with the sale of hardware, our technology solutions segment produces substantially lower gross margins than our software applications segment. Our overall gross profit margin may be adversely affected if revenues of our technology solutions segment rise as a percentage of total revenues. In turn, this could result in reduced net income.

For the fiscal years ended December 31, 2007 and 2006, our software applications segment reported gross margins of 41.6% and 53.1%, respectively. In contrast, our technology solutions segment for such periods reported gross margins of 15.6% and 15.8%, respectively. Accordingly, an increase in hardware and related sales in our technology solutions segment relative to software revenues in our software applications segment could harm our overall gross margin. A shift in our product mix toward lower margin products would adversely affect our overall profitability if increases in volume of lower margin products did not offset the effect of changes in product mix. A decline in margins may also be received negatively by investors. Since establishing our technology solutions business in 1999, we have seen a continual increase in the amount of hardware we have been able to sell. Hardware pricing is highly competitive and product life-cycles can be short. We have recently been able to benefit from identifying, selling and implementing new products (for example, IP telephony and classroom learning tools) with higher margins as a result of selling such products before what we believe to be the midpoint of their life-cycles. As market penetration and competition increase for these products, margins and sales of these products may decline. As current hardware based products mature, there can be no assurance that we will identify new products with equal margins or opportunities for greater volume to replace existing products.

If our products fail to perform properly due to undetected errors or similar problems, or fail to comply with government regulations, our business could suffer, and we could become subject to product or general liability or errors and omissions claims. Such claims could be time-consuming and costly. Furthermore, any negligence or misconduct on the part of our consultants could result in financial or other damages to our customers, for which they may bring claims against us.

Complex software such as ours often contains undetected errors or bugs. Software errors are frequently found after introduction of new software or enhancements to existing software. We continually introduce new products and new versions of our products. If we detect any errors before we ship a product, we might have to delay product shipment for an extended period of time while we address the problem. We might not discover software errors that affect our new or current products or enhancements until after they are deployed, and we may need to provide enhancements to correct such errors. Therefore, it is possible that, despite testing by us, errors may occur in our software. These errors, as well as any negligence or misconduct on the part of our consultants, could result in:

harm to our reputation;

lost sales;

delays in commercial release of our software;

product liability, general liability or errors and omissions claims;

delays in, or loss of, market acceptance of our products;

license terminations or renegotiations; and

unexpected expenses and diversion of resources to remedy errors.

Furthermore, our customers may use our software together with products from other companies. As a result, when problems occur, it might be difficult to identify the source of the problem. Even when our software does not cause these problems, the existence of these errors might cause us to incur significant costs, divert the attention of our technical personnel from our product development efforts, impact our reputation and cause significant customer relations problems.

Our failure to obtain or integrate third-party technologies could delay the development of our software and increase our costs.

We intend to continue licensing technologies from third parties, including applications used in our research and development activities and technologies which are integrated into our products. These technologies may not continue to be available to us on commercially reasonable terms or at all. Our inability to obtain any of these licenses could delay product development until equivalent technology can be identified, licensed and integrated. This inability in turn would harm our business and operating results. Our use of third-party technologies exposes us to increased risks, including, but not limited to, risks associated with the integration of new technology into our products, the diversion of our resources from development of our own proprietary technology and our inability to generate revenue from licensed technology sufficient to offset associated acquisition and maintenance costs.

Our success depends on our ability to respond quickly to changing technology. We believe that we must develop new software programs and services utilizing modern technology in order to maintain our competitive position and profitability.

The market for our products and services is characterized by rapid technological change, evolving industry standards in computer hardware and software technology, changes in customer requirements and frequent new product introductions and enhancements. The introduction of products embodying new technologies and the emergence of new industry standards can cause customers to delay their

Table of Contents

purchasing decisions and render existing products obsolete and unmarketable. The life cycles of our software products are difficult to estimate. As a result, our future success will depend, in part, upon our ability to continue to enhance existing products and to develop and introduce in a timely manner new products with technological developments that satisfy customer requirements and achieve market acceptance. We may not be able to successfully identify new product opportunities and develop and bring new products to market in a timely and cost-effective manner. In addition, products, capabilities or technologies developed by others could render our products or technologies obsolete or noncompetitive or shorten product life cycles. If we are unable to develop on a timely and cost-effective basis new software products or enhancements to existing products, or if new products or enhancements do not achieve market acceptance, we may not be able to compete effectively or maintain or grow our revenues.

Software development is inherently complex, particularly development for multi-platform environments. In addition, our customers demand broad functionality and performance. As a result, major new product enhancements and new products can require long development and testing periods before they are released commercially. We have on occasion experienced delays in the scheduled introduction of new and enhanced products, and future delays could increase costs and delay revenues.

We have made significant investments in software development and our growth plans are premised in part on generating substantial revenue from new product introductions and future enhancements to existing products. New product introductions and enhancements involve significant risks. For example, delays in new product introductions and enhancements, or less-than-anticipated market acceptance, are possible and would have an adverse effect on our revenue and earnings. We cannot be certain that our new products or enhancements will meet customer performance needs or expectations when shipped or that they will be free of significant software defects or bugs. If they do not meet customer needs or expectations, for whatever reason, upgrading or enhancing these products could be costly and time consuming.

In addition, the selling price of software products tends to decline significantly over the life of the product. If we are unable to offset any reductions in the selling prices of our products by introducing new products at higher prices or by reducing our costs, our revenue, gross margin and operating results would be adversely affected.

Advances in technology can require retraining and additional certifications for existing personnel or hiring of more qualified personnel. The most significant portion of our investment in software development is related to labor. If our personnel are unable to keep up with changing technologies or we are unable to attract, hire, and retain personnel having the qualifications needed to engineer, manage and implement technological advances, our competitive position may erode. Erosion of our competitive position could have an adverse effect on our revenues and profitability.

If the security of our software is breached, we could suffer significant costs and damage to our reputation.

Fundamental to the use of our products is the secure collection, storage and transmission of confidential information. Third parties may attempt to breach our security or that of our customers and their databases. We may be liable to our customers for any breach in such security, and any breach could harm our customers, our business and our reputation. Any imposition of liability, particularly liability that is not covered by insurance or is in excess of insurance coverage, could harm our reputation, our business and our operating results. Also, computers, including those that utilize our software, are vulnerable to computer viruses, physical or electronic break-ins and similar disruptions. Such disruptions could lead to interruptions, delays or loss of data and we may be required to expend significant capital and other resources to protect further against security breaches or to rectify problems caused by any security breach.

Future acquisitions could prove difficult to integrate, disrupt our business, dilute stockholder value and strain our resources.

One significant reason for our entering into the merger and recapitalization transaction in February 2005 was to allow us to access public capital markets as a source of funding to permit us to grow through acquisitions. In addition, the merger transaction facilitated the sale of warrants, the exercise of which (absent a cashless exercise) represents a significant potential source of capital. Our markets are occupied by a number of competitors, many substantially larger than we, and with significantly greater geographic reach. We believe that to remain competitive, we need to take advantage of acquisition opportunities that arise which may help us achieve greater geographic presence and economies of scale. We may also utilize acquisitions to, whenever appropriate, expand our technological capabilities and product offerings.

While we may use a portion of any cash proceeds generated by operations or obtained from capital sources to pay down debt on an interim basis, we intend to use any remaining proceeds or availability from a debt related pay down to fund acquisitions. Pursuant to this strategic plan, we intend to acquire companies, products, services and/or technologies that we feel could complement or expand our existing business operations, augment our market coverage, enhance our technical capabilities, provide us with important customer contacts or otherwise offer growth opportunities. Acquisitions and investments involve numerous risks, including:

improper valuation of the acquired business;

difficulties in integrating operations, corporate cultures, technologies, services, accounting and personnel;

Table of Contents

difficulties in supporting and transitioning customers of acquired companies;

diversion of financial and management resources from existing operations;

risks of entering new sectors of the educational and governmental market;

potential loss of key employees;

inability to generate sufficient revenue to offset acquisition or investment costs; and

consumption of significant capital and cash flow to the detriment of other business opportunities and needs.

Acquisitions also frequently result in recording of goodwill and other intangible assets. These intangible assets are subject to potential impairments in the future as well as allocations, including write-ups to depreciable assets, which could negatively impact our future operating results. In addition, if we finance acquisitions by issuing equity securities or securities convertible into equity securities, our existing stockholders could be diluted. Such dilution could in turn affect the market price of our stock. Moreover, financing an acquisition with debt would result in higher leverage and interest costs. As a result, if we fail to evaluate and execute acquisitions properly, we might not achieve the anticipated benefits. We may also incur costs in excess of what we anticipate.

Acquisitions also may impact our margins. In 2007 the decline in our software applications margin was primarily driven by the addition of McAleer operations which has historically reported lower margins. The acquisition of a technology business, with its even lower margins than the software applications addition, could also decrease the margin significantly. We cannot predict the timing of acquisitions or the margins of those entities we may acquire, or their impact on our overall margins.

There can be no assurance suitable acquisition candidates will be available of sufficient size or in sufficient numbers, that we will be able to procure adequate financing, or that we will be able to successfully purchase or profitably manage acquired companies. We can give no assurance that future acquisitions will further the successful implementation of our overall strategy or that acquisitions ultimately will produce returns that justify the investment. In addition, we may compete for acquisitions and expansion opportunities with companies that have significantly greater resources than we do.

We continue to seek out and hold preliminary discussions with various acquisition candidates. However, we have not entered into agreements or understandings for any acquisition which management deems material.

Our ability to raise capital in the future may be limited and our failure to raise capital when needed could prevent us from executing our growth strategy.

The timing and amount of our working capital and capital expenditure requirements may vary significantly depending on many factors, including:

market acceptance of our products and services;

the need to adapt to changing technologies and technical requirements;

the existence of opportunities for expansion; and

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

access to and availability of sufficient management, technical, marketing and financial personnel.

If our capital resources are not sufficient to satisfy our liquidity needs, we may seek to sell additional equity or obtain other financing. We may not be able to obtain sufficient additional financing, if required, in amounts or on terms acceptable to us, or at all.

Under certain circumstances, holders of warrants to purchase shares of our common stock may be able to exercise those warrants pursuant to a cashless exercise. A cashless exercise may adversely impact our business strategy.

The terms of the warrants held by Barron permit the cashless exercise of the warrants under certain circumstances. A cashless exercise would not result in capital inflow to the Company, which may hinder the implementation of our business strategy, one element of which is to expand through acquisition.

We currently do not have any pending or issued patents, but we rely upon trademark, copyright and trade secret laws to protect our proprietary intellectual property rights, which might not provide us with adequate protection. The loss or compromising of our rights in our intellectual property could adversely affect our competitive position and raise our costs.

Our success and ability to compete depend to a significant degree upon the protection of our software and other proprietary technology rights. We might not be successful in protecting our proprietary technology, and our proprietary rights might not provide us with a meaningful competitive advantage. To protect our proprietary technology, we rely on a combination of trademark, copyright and trade secret laws, as well as nondisclosure agreements. Each of these affords only limited protection. Moreover, we have no patent protection for Accounting+Plus software, which is one of our core products. Any inability to protect our intellectual property rights could seriously harm our competitive position, operating results and financial condition.

Table of Contents

In addition, the laws of some foreign countries do not protect our proprietary rights in our products to the same extent as do the laws of the United States. Despite the measures taken by us, it may be possible for a third party to copy or otherwise obtain and use our proprietary technology and information without authorization. Policing unauthorized use of our products is difficult, and litigation could become necessary in the future to enforce our intellectual property rights. Any litigation could be time consuming and expensive to prosecute or resolve, result in substantial diversion of management attention and resources, and materially harm our business, financial condition and results of operations.

Because we generally do not have written software licenses, we must rely primarily on implied licenses and copyrights to protect our software. The enforcement of implied licenses and copyrights may be time-consuming and costly.

Enforcement of the implied licenses on our software would be primarily based on copyright infringement grounds and/or on common law principles pertaining to implied licenses. Proving a breach of contract relating to a violation of an implied license may be difficult. Violations of copyrights on our software could include, among other things, unauthorized copies of the software being made, unauthorized distribution of our software, and unauthorized derivative works being made of our software (such as by reverse engineering). While each of the foregoing rights are held by a copyright owner, copyright infringement may be difficult to prove, whereas a violation of an express license may be more readily provable and may provide additional rights and remedies than available through copyright protection. Therefore, we may have to expend significant time and financial resources should the need arise to enforce an implied license or copyright.

Claims that we infringe upon third parties' intellectual property rights could be costly to defend or settle.

Litigation regarding intellectual property rights is not unusual in the software industry. We expect that software products and services may be increasingly subject to third-party infringement claims as the number of competitors in our industry segment grows and the functionality of products in different industry segments overlaps. We may from time to time encounter disputes over rights and obligations concerning intellectual property. Although we believe that our intellectual property rights are sufficient to allow us to market our software without incurring liability to third parties, third parties may nevertheless bring claims of infringement against us. Such claims may be with or without merit. Any litigation to defend against claims of infringement or invalidity could result in substantial costs and diversion of resources. Furthermore, a party making such a claim could secure a judgment that requires us to pay substantial damages. A judgment could also include an injunction or other court order that could prevent us from selling and/or servicing our software. Our business, results of operations and financial condition could be harmed if any of these events occurred.

In addition, we have agreed, and will likely agree in the future, to indemnify certain of our customers against certain claims that our software infringes upon the intellectual property rights of others. We could incur substantial costs in defending ourselves and our customers against infringement claims. In the event of a claim of infringement, we and our customers might be required to obtain one or more licenses from third parties. We, or our customers, might be unable to obtain necessary licenses from third parties at a reasonable cost, if at all. Defense of any lawsuit or failure to obtain any such required licenses could harm our business, operating results and financial condition.

Increasing government regulation of electronic commerce could reduce our revenues and increase our costs.

We are subject not only to regulations applicable to businesses generally but also to laws and regulations directly applicable to electronic commerce. We deliver marketing, shareholder and customer information, product demonstrations, new software and software updates, technical support and training over the internet. We also sell services whereby a customer may access and use our software to load and manage their organization's data over the internet. Although there are currently relatively few laws and regulations governing electronic commerce, state, federal and foreign governments may adopt laws and regulations applicable to our business. Any such legislation or regulation could increase our operating costs as we are forced to comply, or increase the operating costs to our customers. In any such event, customers may decide not to use our products and services. Any new laws or regulations in the following areas could cause us to incur new compliance expenses, or otherwise adversely affect our business:

user security and privacy;

the pricing and taxation of internet use or goods and services offered or provided via the internet;

the online distribution of specific material, content or services over the internet; and

the content of websites or other internet marketing abilities (e.g., do not call (do not contact) registry requirements).

Table of Contents

A significant portion of our revenues stems from sales to schools receiving funding through the E-Rate Program. A loss of such funding could have a material adverse impact on our revenues and financial condition.

We participate in the E-Rate Program, a government program providing funding for telecommunications, internet access and internal connections for schools that have a very high free and reduced lunch rate count. Schools and school districts that have developed an approved technology plan may receive funds to implement the plan. Service providers may sell to such schools and districts through an open and competitive bidding process. We have received funding through the E-Rate program since 2001, which has in previous years represented up to 25% of our total revenues. The Schools and Libraries Division of the Universal Service Administrative Company, which administers the program, may conduct audits with respect to previous funding years. If the Schools and Libraries Division were to find that either we or the school to which we have made sales did not comply with the rules and regulations of the program, previous funding may have to be repaid and we could be barred from future bidding under the program. To date, we have not had to repay any money received in connection with the program, nor have we been cited for any material violation of program guidelines.

The requirements of being a public company, particularly the requirement to report financial results publicly and on a quarterly basis and compliance requirements under Sarbanes-Oxley, have increased our administrative costs and may reduce our profitability in future periods in comparison to our reported historical results of operations. These requirements may also distract management from business operations.

As a public company, we are subject to a number of requirements, including the reporting requirements of the Securities Exchange Act of 1934, as amended (the Exchange Act), and the Sarbanes-Oxley Act of 2002. The Exchange Act requires, among other things, that we file annual, quarterly and current reports with respect to our business and financial condition. The Sarbanes-Oxley Act requires, among other things, that we maintain effective disclosure controls and procedures and internal controls for financial reporting.

Prior to February 11, 2005, we were a public shell with virtually no operations and had limited staff with highly technical accounting and public reporting expertise. In the first quarter of 2005, we entered into a complex merger and resumed public reporting of significant operations. Considerable additional effort is required to maintain and improve the effectiveness of disclosure controls and procedures and internal controls over financial reporting to meet the demands of a public reporting environment. Particularly, substantial additional resources are required in light of Section 404 of the Sarbanes-Oxley Act and the related regulations regarding our required assessment of our internal controls over financial reporting beginning with our fiscal 2007 Annual Report on Form 10-K and our independent registered public accounting firm's audit of that assessment beginning with our fiscal 2008 Annual Report on Form 10-K. These requirements have made it necessary for us to hire additional and more technical personnel and engage external resources. Public company requirements have increased our administrative costs and may reduce our profitability in future periods in comparison to our reported historical results.

Significant management oversight will also be necessary in light of these requirements. As a result, our management's attention might be diverted from other business concerns, which could have a material adverse effect on our business, financial condition, results of operations and cash flows.

Our inability to attract and retain qualified personnel to adequately manage the implementation of these requirements in a timely fashion might adversely impact our compliance with Section 404. Any failure to comply with Section 404 as required may harm our financial position, reduce investor confidence, cause a decline in the market price for our common stock and subject us to costly litigation.

Failure to comply with certain standards could result in a conclusion that there are significant deficiencies or material weaknesses in our internal control over financial reporting, and management may be unable to declare our internal control over financial reporting effective.

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed by us in the reports we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods required by the SEC. These disclosure controls include those controls and procedures designed to ensure that such information is accumulated and communicated to our management to allow timely decisions regarding required disclosures. Our management, under the direction of our chief executive officer and chief financial officer, evaluate the design and effectiveness of our disclosure controls and procedures (as such term is defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) as of the end of each quarter. Based on such evaluations, these officers have, in the past, concluded that our disclosure controls and procedures have not been effective, and that certain weaknesses in our internal control over financial reporting have existed. These weaknesses or deficiencies included both needed improvements in our controls and processes, and the need to hire personnel and purchase resources to support the needs of a public company. Prior to February 11, 2005, we were a public shell with virtually no operations and had limited need for staff with highly technical accounting and public reporting expertise. In addition, our predecessor, CSI South Carolina, was a private company and likewise had no need for staff with technical accounting and public reporting expertise. In the first quarter of 2005, we entered into a complex merger and resumed public reporting of significant operations. It was not until May 6, 2005 that we hired a chief financial officer with prior public reporting experience who is accustomed to dealing with more complex accounting matters.

Table of Contents

While these weaknesses have been mitigated through changes in processes, increased hiring of internal personnel, engagement of external personnel with sufficient technical experience, and purchases of software resources to support our efforts, it was not until the fourth quarter of 2007 that management was able to conclude that our disclosure controls and internal control over financial reporting were effective. These conclusions followed our implementation of controls and processes in connection with the Sarbanes-Oxley Act legislation.

Even with these changes and our declaration of effectiveness, due to the increasing number and complexity of pronouncements, emerging issues and releases, and reporting requirements and regulations, we expect there will continue to be some risks related to our financial disclosures. We believe that such risks have been reasonably mitigated following our implementation of the Sarbanes-Oxley Act requirements in late 2007. However, the process of identifying risk areas and implementing financial disclosure controls and internal controls over financial reporting required under the Sarbanes-Oxley Act continues to be complex and subject to significant judgment. This process may result in the identification in the future of areas where we may need additional resources or changes in processes. Additionally, due to the complexity and judgment involved in this process, we cannot guarantee that we may not find or have pointed out to us, including by our auditors following their future required independent assessment of our controls, additional areas needing improvement or resulting in a future assessment that our controls are or have become ineffective as a result of overlooked or newly created significant deficiencies or unmitigated risks.

We may discover and report additional weaknesses in our internal controls. Reporting deficiencies could harm our financial position, reduce investor confidence, cause a decline in the market price for our common stock and subject us to costly litigation.

Effective internal controls are necessary for us to provide reliable financial reports and effectively prevent fraud. If we cannot provide reliable financial reports or prevent fraud, our results of operations could be misstated and our reputation may be harmed.

The PCAOB has defined a material weakness as a significant control deficiency, or combination of deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. A material weakness does not necessarily mean that a material misstatement has occurred or will occur, but that it could occur.

Our management is responsible for establishing and maintaining adequate internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act). Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of published financial statements in accordance with generally accepted accounting principles.

However, because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or the degree of compliance with policies may deteriorate.

While we have declared our internal control over financial reporting effective as of the period ended December 31, 2007, we cannot assure you that the measures we have taken to date or further measures will ensure that we will be able to implement and maintain adequate controls over our financial processes and reporting to prevent any failure or deficiency. Any deficiencies or failures in internal controls or reporting deficiencies or failures could harm the financial position of our business, reduce investor confidence, cause a decline in the market price for our common stock, and subject us to costly litigation.

Our management has limited experience in managing a public company, which could hamper our ability to function effectively as a public company.

Our management team has historically operated our business as a privately-owned corporation. Except for our CFO, hired May 6, 2005, the individuals who now constitute our senior management did not have experience managing a publicly-traded company prior to our reverse merger. In particular, management is inexperienced in utilizing sophisticated forecasting or long term historical analysis of data that may be used for projecting future operating and financial results with a significant degree of consistency and accuracy. Due to the limited number of our personnel with experience with publicly-traded companies, any unexpected departure of our CFO could result in our inability to comply fully with accounting pronouncements and public filing requirements on a timely basis. If we are unable to comply, our financial condition could be adversely affected.

In addition, although we are in the process of updating our systems and processes to public company standards, such systems and processes in many aspects still reflect those of a non-public corporation. As a result, we cannot assure you that we will be able to execute our business strategy as a public company. You should be especially cautious in drawing conclusions about the ability of our management team to provide guidance or other forward looking information regarding our operating or financial results with a reasonable degree of consistency and accuracy.

Table of Contents

The development and enhancement of our software requires significant capital expenditures that we may not be able to make if we were to experience significant revenue reductions. Our failure or delay in developing and enhancing our software could seriously erode our competitive position.

Software technology is characterized by rapid technological change and evolving industry standards that require continuous development and enhancements to our software applications. Significant resources, primarily in the form of salaries and benefits, are required to keep up with these changes. We are in the process of rewriting our software applications to take advantage of current technologies. If we were to experience significant revenue reductions, our ability to implement these changes could be delayed or eliminated, eroding our competitive position and adversely affecting our revenues and financial condition.

We may not be able to repay both our bank credit facility which matures in June 2009 and our subordinated notes which matured in May 2006 and are currently in default. Any failure to repay or secure a renewal or refinancing of the bank credit facility, and to obtain the continued cooperation of the holders or a restructuring of the subordinated notes, could have a material adverse effect on our liquidity position and our ability to fund operations.

On September 14, 2007, we entered into agreements with our senior lender, RBC Centura Bank. The primary purpose was to increase the amount of our credit facilities in order to provide for our expanding working capital and other credit needs. Specifically, the Company's revolving facility was increased from \$5.5 million to \$7.0 million. The revolving facility is priced at one month LIBOR plus 2.5% and expires on June 30, 2009. Availability under the revolving facility is determined pursuant to a borrowing base equal to 80% of the Company's eligible accounts receivable and 50% of the Company's eligible inventory up to \$1,000,000. The revolving facility and our equipment facility are secured by substantially all of our assets. In January 2007, the revolver, which was originally established in connection with our reverse merger in 2005, was increased to support the McAleer acquisition.

Although we possessed adequate availability on the May 9, 2006 due date to repay the subordinated notes, management believed that cash flow from operations and remaining availability under the bank facility following such a drawdown would not be sufficient to fund ongoing working capital needs. We also anticipated that such a refunding of the subordinated notes with bank debt would have caused us to fail to comply with equity related covenants with the bank, given that the subordinated notes are treated as equity for such ratios. Accordingly, after consultation with the bank and the holders of the subordinated notes, we determined it was not in the best interest of all stakeholders to pay the notes at maturity, and the subordinated notes remain due and payable. We pay a default interest rate of 15%, both on the principal balance and any interest not paid quarterly. From time to time we have deferred the payment of interest to preserve working capital. Specifically, we took this action in the first and second quarters of 2007 as a precautionary measure considering the cash requirement needed for the acquisition of the McAleer operations. Subsequently, we paid this and other interest due and no interest was in arrears as of December 31, 2007.

Our subordinated noteholders have cooperated with us in the deferral of payment on the subordinated notes. We anticipate the continued cooperation of the noteholders and the ultimate resolution with future payments or other restructuring of our subordinated debt. Looking forward, considering our growth and acquisition strategy, we believe it unlikely that we will be able to generate sufficient operating cash flow so as to permit repayment of the subordinated notes with draws under the revolving credit facility. Instead, we believe the subordinated notes will more likely be restructured or repaid from long term capital sources. The subordinated notes may, for example, be refinanced as part of the financing of future acquisitions, or repaid from the proceeds of the exercise of warrants by Barron. However, we can give no assurance that we will be able to successfully restructure, extend or repay the subordinated notes, or that the noteholders will continue to cooperate. Our bank lender has likewise consented with respect to the subordinated notes and has granted a waiver relating to their nonpayment. The notes are subordinated to our senior bank debt, and we believe the ability of the noteholders to have direct recourse against us is limited. However, the holders of the subordinated notes may take actions that could adversely affect the Company, including acting to accelerate the subordinated debt, thereby potentially triggering a default under our credit facility with our bank. Such noteholders also may take legal or other adverse collection actions against the Company. We can therefore give no assurances as to what adverse collection actions the subordinated noteholders might take, and the impact such actions and default might otherwise have on our other creditors and our financial condition. However, we do not anticipate any of the noteholders taking any action detrimental to us. It should be noted that five of the subordinated noteholders are currently significant stockholders of the Company, and four of these are executive officers. The sixth noteholder, Barron, holds all our preferred stock.

While we have drawn on our line significantly and paid it down from time to time, we cannot guarantee that cash flow from operations will be sufficient to repay our line of credit facility at the time it is due and adequately fund our growing working capital needs. In the alternative, we would attempt to refinance the credit facility with another lender. Although management currently believes that our existing lender will agree to a renewal of the facility, there can be no assurance that our bank will in fact do so or that replacement financing could be procured by us on favorable terms or at all. Further, any failure to resolve our default under or otherwise restructure the subordinated notes, or to maintain the cooperation of the holders of such notes, could negatively impact our ability to renew our existing bank credit facility or procure a replacement. Without such a credit facility, we believe that our ability to fund our business operations, including providing sufficient working capital to fund sales growth, could be adversely affected.

Table of Contents

We depend on key management and may not be able to retain those executives or recruit additional qualified personnel.

We believe that our future success will be due, in part, to the continued services of our senior management team. This team historically has been and we anticipate for the foreseeable future will continue to be relatively small. Our company was built by the five former shareholders of CSI South Carolina who were largely responsible for our growth over the past 15 years. All of these founders of the Company now serve as our executive officers, with the exception of our former interim CFO, Joe G. Black, now retired. Each of the remaining four CSI South Carolina founders have garnered significant technical expertise in both our products and the requirements of our client base. They have also developed relationships with our clients that we believe are valuable. They have been responsible for the technical development of our products and solutions and the creation of our business strategy. Because we are now a public company, we must also retain a chief financial officer with requisite technical expertise to handle the requirements of public company reporting and compliance. Our ability to implement our business plan is dependent on the retention of these executives who have specific, differentiated skills, as well as key management personnel of businesses we acquire. Losing the services of one or more members of our management team could adversely affect our business and expansion plans.

Our certificate of incorporation limits the liability of our directors, which may bar stockholder actions and recovery against the directors for misconduct.

We have adopted provisions in our Amended and Restated Certificate of Incorporation that eliminate to the fullest extent permissible under Delaware law the liability of our directors for monetary damages for breach of fiduciary duty as a director. While it may limit stockholder actions against the directors of the Company for various acts of malfeasance, the provision is designed to ensure the ability of our directors to exercise their best business judgment in managing the Company's affairs, subject to their continuing fiduciary duties of loyalty to the Company and its stockholders. Absent such a limitation, their judgment could be unreasonably impeded by exposure to potentially high personal costs or other uncertainties of litigation.

Our certificate of incorporation and bylaws provide for the indemnification of management, which in certain circumstances could serve to circumvent the recovery by stockholders in legal actions.

Our Amended and Restated Certificate of Incorporation and Amended and Restated Bylaws, to the fullest extent permitted by Delaware law, provide, generally, that the Company will indemnify, including the advancement of expenses, any director, officer, employee or agent of the Company who is, or is threatened to be made, a party to any action, suit or proceeding by reason of the fact he was acting as a director, officer, employee or agent of the Company. Any advancement of expenses is subject to the indemnified person undertaking to repay any advanced expenses later deemed to be improper. Such indemnification would cover the cost of attorneys' fees as well as any judgment, fine or amount paid in settlement of such action provided that the indemnified party meets certain standards of conduct necessary for indemnification under applicable law and the provisions of the Amended and Restated Bylaws. Such indemnity may or may not be covered by officer and director liability insurance and could result in expense to the Company even if such person is not successful in the action. This provision is designed to protect such persons against the costs of litigation that may result from his or her actions on our behalf.

Risk Factors Relating to Our Common Stock

Our quarterly financial results fluctuate and may be difficult to forecast. If our future results are below either any guidance we may issue or the expectations of public market analysts and investors, the price of our common stock may decline.

Our quarterly revenue and results of operations are difficult to forecast. We have experienced, and expect to continue to experience, fluctuations in revenue and operating results from quarter to quarter. As a result, we believe that quarter-to-quarter comparisons of our revenue and operating results are not necessarily meaningful and that such comparisons might not be accurate indicators of future performance. The reasons for these fluctuations include but are not limited to:

the amount and timing of sales of our software, including the relatively long sales cycles associated with many of our large software sales;

budget and spending decisions by our customers;

market acceptance of new products we release;

the amount and timing of operating costs related to the expansion of our business, operations and infrastructure;

changes in our pricing policies or our competitors' pricing policies;

seasonality in our revenue;

general economic conditions; and

costs related to acquisitions of technologies or businesses.

Table of Contents

Certain of our costs and expenses are based on our expectations of future revenue and are, to a large extent, fixed in the short term. These include: our software development costs, certain other overhead costs in costs of sales and the majority of our general and administrative expenses. If revenue falls below our expectations in a quarter and we are not able to quickly reduce our expenses in response, our operating results for that quarter could be adversely affected. It is possible that in some future quarter our operating results may be below either any guidance we may issue or the expectations of public market analysts and investors and, as a result, the price of our common stock may fall.

The market for our common stock is limited. Accordingly, we cannot assure that an adequate market will develop for our common stock or what the market price of our common stock will be.

Our common stock is currently traded in the over-the-counter market and is quoted on the OTC Bulletin Board. As of February 20, 2008, only approximately 2,000,971 shares were held by non-affiliates and available for trading in the over-the-counter market. As a result, the liquidity of our common stock is limited, not only in the number of shares that are bought and sold, but also through delays in the timing of transactions and the lack of coverage by security analysts and the news media of our company.

In addition, prices per share of our common stock may be lower than might otherwise prevail if it were quoted on the NASDAQ Stock Market or traded on a national securities exchange, such as the New York Stock Exchange or the American Stock Exchange. This lack of liquidity may also make it more difficult to raise capital in the future through the sale of equity securities.

The price of our common stock might be volatile.

Our stock price has been and may continue to be volatile, making an investment in our company risky. In recent years, technology stocks have experienced high levels of volatility and significant declines in value from their historic highs. The trading price of our common stock may fluctuate substantially. The price of the common stock that will prevail in the market might be higher or lower than the price you pay, depending on many factors, some of which are beyond our control and may not be related to our operating performance. The fluctuations could cause you to lose part or all of your investment in our shares of common stock. Those factors that could cause fluctuations in the trading price of our common stock include the following:

price and volume fluctuations in the overall stock market from time to time;

significant volatility in the market price and trading volume of software and technology companies;

actual or anticipated changes in our earnings or fluctuations in our operating results or in the expectations of securities analysts;

economic conditions and trends in general and in the software and information technology industries;

major catastrophic events, including terrorist activities, which could reduce or divert funding from, and technology spending by, our core customer base of municipal governments and educational institutions;

our common stock continuing to be thinly traded, with the result that relatively small sale transactions have a market impact out of proportion to their magnitude;

lack of awareness of CSI by a reasonable quantity of investors, coupled with bargain based bidding by a limited number of investors, and conversely increasing awareness of CSI resulting in higher demand;

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

changes in our pricing policies or the pricing policies of our customers;

changes in the estimation of the future size and growth of our market; or

departures of or changes in key personnel.

In the past, following periods of volatility in the market price of a company's securities, securities class action litigation has often been brought against that company. Due to the potential volatility of our stock price, we might be the target of securities litigation in the future. Securities litigation could result in substantial costs and divert management's attention and resources from our business.

The sale of common stock under our registration statement could encourage short sales by third parties.

If a significant number of shares are sold pursuant to our registration statement, the effect may be downward price pressure on shares of our common stock. Falling share prices may encourage short sales of our common stock, which may exacerbate the downward price pressure.

Table of Contents

Holders of the Series A Convertible Preferred Stock have certain rights which are superior to those of the common stockholders. These rights may adversely affect the liquidity and value of your investment.

The superior rights of the preferred stock include:

If we are liquidated, our preferred stockholders have priority on the distribution of assets up to their original investment value of \$0.6986 per share. If any assets remain after the preferred stockholders receive their entitlement, then the remaining assets will be distributed on a pro rata basis to the common stockholders.

In the event of a change in control of our company or the occurrence of certain other transactions including, but not limited to, a tender offer, exchange offer or compulsory share exchange, holders of Series A Convertible Preferred Stock are entitled to treat such a transaction as a liquidation and recover their original investment in our company.

While the preferred stock is outstanding, we are not permitted to pay dividends on our common stock. This restriction means we are unlikely to pay dividends to our common stockholders in the foreseeable future.

In the future, if we were to offer shares of common stock to the public for cash, the holder of Series A Convertible Preferred Stock and the five former shareholders of CSI South Carolina would have the right to participate pro rata in such an offering at 80% of the offering price. We do not currently contemplate such an offering.

The Certificate of Designation of Preferences, Rights and Limitations of Series A Convertible Preferred Stock permits the preferred stockholders to demand the return of their original investment under certain circumstances, which could hinder a stock transfer or business combination transaction beneficial to stockholders.

The preferred stockholders have the ability to elect to treat a change in control and certain other fundamental transactions as a liquidation and to be repaid their original investment under these circumstances. These transactions include a tender offer, an exchange offer, or a compulsory share exchange. The ability of the preferred stockholders to elect liquidation treatment could hinder or even prevent an acquisition transaction that might be beneficial to our common stockholders.

The raising of additional capital in the future may dilute your ownership in our company.

We may need to raise additional funds through public or private debt or equity financings in order to:

take advantage of opportunities, including more rapid expansion;

acquire complementary businesses or technologies;

refund our subordinated notes, which totaled \$2,250,400 at December 31, 2007, or other indebtedness;

provide additional working capital to support revenue growth;

develop new services and products; or

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

respond to competitive pressures.

Any additional capital raised through the sale of equity may dilute your ownership percentage in our company.

We could issue additional shares of common stock, which might dilute the book value of our common stock.

We have a total of 40,000,000 authorized shares of common stock, of which 4,698,970 shares were issued and outstanding as of February 20, 2008. Our board of directors has the authority, without action or vote of our stockholders in most cases, to issue all or a part of any authorized but unissued shares of our common stock. Such stock issuances may be made at a price that reflects a discount from the then-current trading price of our common stock. Of our 40,000,000 authorized shares, we had reserved for issuance as of February 20, 2008, 13,398,875 shares of common stock relating to outstanding warrants, options and convertible preferred stock. An additional 397,756 shares of our common stock were reserved for issuance under our 2005 Incentive Compensation Plan as of such date. Also, we anticipate that we may issue common stock in acquisitions we anticipate making pursuant to our business strategy. Any issuances relating to the foregoing would dilute your percentage ownership interests, which would have the effect of reducing your influence on matters on which our stockholders vote. They might also dilute the tangible book value per share of our common stock. In addition, the Series A Convertible Preferred stockholder and the five former shareholders of CSI South Carolina have the right, so long as any of the Series A Convertible Preferred stock is still outstanding, to participate in any funding by the Company (including a sale of common stock) on a pro rata basis at 80% of the offering price, which right if exercised might dilute our net tangible book value per share. Further, Barron has the right under certain circumstances to effect a cashless exercise of the warrants, which would dilute the tangible book value per share of our common stock.

Table of Contents

Because we intend to retain any earnings to finance the development of our business, we may never pay cash dividends. Furthermore, the terms of the Series A Convertible Preferred Stock prohibit the payment of cash dividends. Agreements with our bank lender contain significant restrictions on cash dividends.

We have not paid cash dividends, except for the one-time cash dividend paid by CSI South Carolina, our predecessor, prior to the February 2005 merger and sale of preferred stock. Pursuant to the Preferred Stock Purchase Agreement, no dividends may be paid on our common stock while any Series A Convertible Preferred Stock is outstanding. Also, our agreements with our bank lender prohibit any dividend which would, upon payment, result in a default under our financial covenants. Regardless of these restrictions, we do not anticipate paying cash dividends on our common stock in the foreseeable future, but instead intend to retain any earnings to finance the development of our business.

Availability of significant amounts of common stock for sale in the future, or the perception that such sales could occur, could cause the market price of our common stock to drop.

A substantial number of shares of our common stock may be issued and subsequently sold upon the exercise of the two common stock warrants and the conversion of Series A Convertible Preferred Stock held by Barron. Of the 14,435,472 shares originally issuable under the preferred stock and warrants, 13,023,672 shares remained to be issued as of February 20, 2008. In addition, the five former shareholders of CSI South Carolina, four of whom are officers of the Company, held on such date 2,526,905 shares of common stock, which have not been registered under the Securities Act of 1933, as amended (the Securities Act), and are accordingly subject to the resale restrictions under such Act and Rule 144 thereunder. Outside directors also held 171,094 shares issued pursuant to our 2005 Incentive Compensation Plan, which are registered for sale under the Securities Act pursuant to a Form S-8 registration statement. There were also outstanding non-executive employee options to purchase approximately 375,203 shares of our common stock on February 20, 2008, and consultants held 404,734 shares, 60,000 of which are unregistered restricted shares. Additionally, at February 20, 2008, there remained 397,756 shares of common stock which could be issued under our 2005 Incentive Compensation Plan. The sale of any or all of these shares could have an adverse impact on the price of our common stock, as could the sale or issuance of additional shares of common stock in the future in connection with acquisitions or otherwise.

The number of shares which may be sold by Barron is relatively large compared to the number of shares held by our management and our non-affiliated public shareholders. If one or more investors purchased a large number of shares from Barron, they may be able to effect a change of control of the Company.

As of February 20, 2008, our executive officers and directors held 2,192,618 shares of our outstanding common stock, representing approximately 46.7% of the total number of shares outstanding. Barron may sell up to 14,435,472 shares of common stock (of which, as of the date of this report, 13,023,672 shares remain to be sold). Barron is prohibited from beneficially owning greater than 4.9% of our shares (except under limited circumstances involving significant acquisition transactions). However, an investor could acquire a significant number of shares in or subsequent to this offering and effect a change in control of us, including replacing our current management. Such an event might generate uncertainty and a loss of investor confidence.

Insiders currently hold a significant percentage of our stock and could limit your ability to influence the outcome of key transactions, including a change of control, which could adversely affect the market price of our stock.

As of February 20, 2008, approximately 53.8% or 2,526,905 shares of our common stock were held by the former CSI South Carolina shareholders, four of whom are currently executive officers. Outside directors held 171,094 shares. Non-executive officer employees of the Company also held options to purchase approximately 375,203 shares. All of these shareholdings have the potential of solidifying control of the Company with insiders, and would likely limit the ability of any minority stockholders to influence the outcome of key decisions, including elections of directors.

Item 1B. Unresolved Staff Comments.

Not applicable.

Item 2. Properties.

We lease our headquarters offices from Chuck Yeager Real Estate under the terms of a lease dated November 30, 2005. The facility consists of a 32,163 square foot suite in a commercial building located at 900 East Main Street, Suite T, Easley, South Carolina 29640. Approximately 24,500 square feet are utilized for offices, with the remainder being warehouse space. We intend to convert the warehouse space into offices over time

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

as needed. The facility has room for significant additional growth into other suites should we require additional space and the suites become available. The space is leased for five years from the April 2006 initial occupancy at an initial rate of \$11,224 per month for the first two years. The lease escalates in years three, four and five to \$11,640, \$12,057 and \$12,265 per month, respectively, with the anticipated conversion to office space assumed under the lease terms. The office space is leased for \$4.50 per square foot, and the space initially used for warehousing begins at \$2 per square foot and escalates to \$4.50 over the initial five year lease term. There are two five year options to renew, the first at \$5.75 per square foot, and the second at an additional 5% or the percentage rate of lessee's pro rata share of increased building operating expenses if greater. On June 20, 2007

Table of Contents

the Company and Chuck Yeager Real Estate amended the operating lease agreement, originally entered into on November 30, 2005, to include an additional 12,544 square feet of warehouse space. The lease of the additional warehouse space was the result of carrying additional inventory and increased monthly rent by approximately \$2,400. While the lease on the additional space was scheduled to expire on August 31, 2007, the Company extended the lease until December 31, 2007, and has since been renting the additional space on a month to month basis, but may choose to extend the term lease once again.

As a part of our acquisition of substantially all the assets of McAleer on January 2, 2007, we acquired an approximately 7,200 square foot commercial building in Mobile, Alabama, appraised at \$540,000. The building houses the offices from which we will continue to serve the McAleer customers for the foreseeable future. This property is subject to a mortgage securing our promissory note to pay \$486,000 to our bank lender. In addition, and prior to the acquisition, McAleer was leasing property adjacent to the commercial building pursuant to an oral lease, on a month-to-month basis. This adjacent property is approximately 1,800-2,000 square feet. The monthly rental for this property is \$1,200. We will continue to lease and utilize this property for the foreseeable future.

All of our properties are in good condition. We do not own or lease any additional facilities. However, we do maintain addresses in North Carolina and Georgia through a public image package from Office Suites Plus. The North Carolina address is 6047 Tyvola Glen Circle, Charlotte, North Carolina 28217, and the monthly charge is \$144. The Georgia address is 3235 Satellite Boulevard, Building 400, Suite 300, Duluth, Georgia 30096 and the monthly charge is \$129.

2008		
1 st Quarter (through February 20, 2008)	1.40	0.85

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Source: <http://finance.yahoo.com>.

As of February 20, 2008, there were 4,698,970 shares of common stock outstanding and approximately 200 stockholders of record, and 6,859,736 shares of Series A Convertible Preferred Stock outstanding with one preferred stockholder of record. Of the total number of shares of common stock outstanding, 2,697,999 shares were held by the five former shareholders of CSI South Carolina and directors, and approximately 2,000,971 shares were available for trading by non-affiliates in the over-the-counter market. Such amounts represented 57.4% and 42.6%, respectively, of the total amount of outstanding common stock of the Company.

Table of Contents

We have paid no cash dividends during the past three fiscal years, except for the dividends payable by CSI South Carolina in February 2005 relating to the reverse merger. For a discussion of the merger related dividends, see Item 1. Business E. The Merger and Recapitalization.

No dividends may be paid with respect to the Series A Convertible Preferred Stock and, pursuant to the Preferred Stock Purchase Agreement, no dividends may be paid on our common stock while any Series A Convertible Preferred Stock is outstanding. Also, our agreements with our bank lender prohibit any dividend which would, upon payment, result in a default under our financial covenants. Furthermore, even if these dividend restrictions were to be no longer effective, we have no plans to pay dividends in the foreseeable future. Instead, we intend to retain the earnings of our business for working capital and other investments in order to fund future growth.

The Equity Compensation Plan information as of December 31, 2007 is incorporated by reference to Item 12 of this Annual Report on Form 10-K.

Item 6. Selected Financial Data.

Not applicable.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

A. Introduction

Unless the context requires otherwise, (1) Computer Software Innovations, Inc., CSI, we, our, us and the Company refer to the consolidated combined business of Computer Software Innovations, Inc., a Delaware corporation and its subsidiary, CSI Technology Resources, Inc., a South Carolina corporation; (2) VerticalBuyer refers to the Company prior to its merger with CSI South Carolina on February 11, 2005; and (3) CSI South Carolina refers to Computer Software Innovations, Inc., a South Carolina corporation, prior to the merger.

Products and Services

We develop software applications and provide hardware-based technology solutions.

Through our software applications segment, we report the results of operations related to our internally developed software. Our primary software, fund accounting based financial management software, is software focused primarily on the needs of organizations that employ fund accounting. Fund accounting is used by those entities that track expenditures and investments by fund, or by source and purpose of the funding, and is utilized primarily by public sector and not-for-profit entities. Our client base consists principally of K-12 (kindergarten through grade 12) public education and local government organizations including counties and municipalities. Our clients also include public libraries, disabilities boards, higher education and other non-governmental clients.

We also provide standards based lesson planning software that allows education professionals to create, monitor and document lesson plans and their compliance with a state's curriculum standards. Additionally, we rebrand or resell other software applications and services including application delivery, data recovery, warmsite and other applications focused solutions and report the results through our software applications segment.

We report the results of operations related to our hardware-based technology solutions through our technology solutions segment. Our technology solutions include a wide range of technology products and services including hardware and related design, engineering, installation, training and ongoing support and maintenance. Technology solutions include computers, networking hardware and software, wireless, firewall and email solutions, IP telephony, interactive whiteboard solutions and integrated accessories, video surveillance, distance learning and video communication. These technology solutions are offered to our primary customer base, users of fund accounting. Some solutions, such as IP telephony and video conferencing, are also offered to for-profit entities as opportunities arise.

Organization

Our business efforts are focused on two key operating segments: internally developed software applications and related service and support (our Software applications segment), and other technology solutions and related service and support (our Technology solutions segment).

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Software Applications Segment

Our Software applications segment develops accounting and administrative software applications that are designed for organizations that employ fund accounting. These organizations are primarily municipalities, school districts and local governments. Specific software modules include:

General (or Fund) Ledger

40

Table of Contents

Accounts Payable;

Purchasing;

Payroll;

Personnel;

Employee Absence/Substitutes;

Inventory;

Utility Billing; and

Other specialty modules designed for government markets.

Our Software applications segment includes a staff of software developers, implementers, trainers, sales personnel and applications support specialists focused primarily on the development, sales, deployment and support of our in-house software products. From time-to-time they also provide support for the Technology solutions segment.

As in other competitive software businesses, the sales and support of software products developed for resale, coupled with few related hardware sales, support higher margins in the Software applications segment (also referenced as software and related services). The sales of the Technology solutions segment (also referenced as hardware sales and related services) are typically at lower margins, due to the amount of hardware, a traditionally low margin product, included in those sales.

Technology Solutions Segment

Our Technology solutions segment has a staff of certified engineers capable of providing a broad range of technology solutions to our client base, including, but not limited to:

Technology planning (developing plans to purchase or upgrade computers, telephone equipment, cabling and software);

Hardware/software installations;

Cabling (installation of wiring and wireless devices to link computer networks and telephones);

System integration (installation of computers and configuration of software to enable systems to communicate with and understand each other);

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Wide area networking (linking a group of two or more computer systems over a large geographic area, usually by telephone lines or the internet);

Wireless networking (linking a group of two or more computer systems by radio waves);

IP telephony and IP surveillance (sending voice calls and surveillance across the internet using internet protocol (IP), a standard method for capturing information in packets);

Project management (overseeing installation of computers, telephone equipment, cabling and software);

Support and maintenance (using Novell, Microsoft, Cisco and Citrix certified engineers and other personnel to fix problems);

System monitoring (proactively monitoring computers and software to detect problems);

Education technologies (distance learning and classroom learning tools such as interactive white boards and integrated accessories, such as hand held voting devices and audio systems).

In addition to our engineers, our Technology solutions segment includes a staff of sales persons, project managers and product specialists. Our Technology solutions segment also purchases and resells products from a variety of manufacturers including but not limited to Hewlett Packard, Cisco, Microsoft, Novell, Promethean, Tandberg and DIVR, and supports the Software applications segment, as needed.

The combination of traditionally low margin sales of hardware with the sales of services results in a much lower margin for the Technology solutions segment when compared to the Software applications segment. Margins for the Software applications segment were 41.6% for the 2007 fiscal year, while margins for the Technology solutions segment were 15.6% for the same period. Margins for the Software applications segment were 53.1% for the 2006 fiscal year, while margins for our Technology solutions segment were 15.8% for the same period. The significant change in the software applications segment margin from 2006 to 2007 was primarily a result of the addition of the CSI-Mobile operations with traditionally lower margins than CSI-Easley.

We believe the combined efforts of our Technology solutions segment with that of our Software applications segment provide CSI with a competitive advantage in the education and government markets.

For a discussion of the results of the reported segments, see the section entitled F. Financial Performance below.

Table of Contents

Strategy

While we report the business as two segments and use such information for analysis and decision making purposes, we also operate the business collectively, taking advantage of cross-selling opportunities. As a part of our software applications and technology solutions sales efforts we provide systems and software networking and integration services. These services also generate a significant amount of revenue by increasing demand for the computer hardware equipment we sell.

Our marketing strategy is to provide a suite of software products coupled with full service integration of the hardware solutions that support those products and other back-office functions, and to provide ongoing technical support, monitoring and maintenance services to support the clients' continuing needs. We also market our hardware solutions and ability to provide a wide level of services and support independent from our software solutions, which when marketed to a fund accounting based organization may also lead to future software sales and integration services. By providing a client the ability to call one solution provider and circumvent the difficulties that often arise when dealing with multiple vendors, we believe we are able to achieve high long-term client satisfaction and a competitive advantage in the marketplace. Repeat business from and increased account penetration through added products and services within our existing customer base has been key to our success and we expect it will continue to play a vital role in our growth. Our focus is on nurturing long-standing relationships with existing customers while establishing relationships with new customers. Over the past ten years we have retained more than 90% of our financial management software customers, and many have become technology solutions customers. Some of our customers who first purchased technology solutions and services have subsequently become financial management software customers.

Our long-term strategy is to pursue a national presence. Our primary, initial focus has been on the southeast region of the United States. As a result of our recent acquisition of McAleer Computer Associates, Inc., (McAleer) discussed below, we have expanded our reach into the southeastern states significantly and are beginning to look at other areas of the United States as well. By strategically combining our internally developed software applications with our ability to integrate computer, networking and other hardware solutions, we have been successful in providing software and hardware solutions to over 400 clients located in the tri-state area of South Carolina, North Carolina and Georgia.

Prior to January 2, 2007, we supported our operations principally out of our physical location in Easley, South Carolina. On January 2, 2007, we acquired the operations, in an asset purchase acquisition, of McAleer. An Alabama corporation based in Mobile, Alabama, McAleer is primarily a provider of financial management software to the K-12 education market. It has been in operation for over twenty-five years. The acquisition of McAleer strengthens CSI's current operations with the addition of an office in Mobile, Alabama, from which CSI will be able to deliver expanded software, technology and service offerings to a broader geographic area and the local government (city and county) markets. The addition of McAleer brings on more than 160 additional fund accounting customers in the K-12 education sector, with a geographic presence in five states not previously served by CSI: Alabama, Mississippi, Louisiana, Tennessee and Florida. Like CSI, McAleer also has customers in Georgia and South Carolina. In contrast to CSI, McAleer has not historically focused on the local government market or provided as broad a range of technology solutions. CSI has the opportunity to increase sales to those specific markets and the new regions that McAleer serves. McAleer and the acquisition is discussed in more detail below under B. Recent Developments Acquisition of McAleer Computer Associates, Inc.

The products and services previously offered by McAleer are now products and services of CSI. However, where appropriate, in order to differentiate, we refer to the products and services offered by McAleer prior to the acquisition, and from which continued service and support will be offered from the Mobile, Alabama office subsequent to the acquisition, as McAleer or CSI-Mobile products and services. All other products and services of CSI referred to, and the software applications products and services referred to specifically as CSI-Easley, are those offered by CSI prior to the acquisition of McAleer, and for which CSI continues to provide the development, support and services primarily from its Easley, South Carolina headquarters.

For more information on our strategy, see Item 1. Business H. Strategy.

Acquisitions

We believe that to remain competitive, we need to take advantage of acquisition opportunities that arise which may help us achieve greater geographic presence and economies of scale. We may also utilize acquisitions to, when appropriate, expand our technological capabilities and product offerings. While we may use a portion of any cash proceeds generated by operations or obtained from capital sources to pay down debt on an interim basis, we intend to use any additional liquidity and/or availability from those sources to fund acquisitions. We believe our markets contain a number of attractive acquisition candidates. We foresee expanding through acquisitions of one or more of the following types of software and technology organizations:

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Developers and resellers of complementary software, such as time and attendance, workflow management, tax appraisals and assessment, education, court and law enforcement related products.

Table of Contents

Consulting firms providing high level professional services. We believe this type of acquisition would enhance our offering of technology planning and project management.

Cabling and infrastructure contractors. We currently outsource cabling services.

Our business strategy provides that we will examine the potential acquisition of companies and businesses within our industry. In determining a suitable acquisition candidate, we will carefully analyze a target's potential to add to and complement our product mix, expand our existing revenue base, improve our margins, expand our geographic coverage, strengthen our management team and, above all, improve stockholder returns.

As previously disclosed, on January 2, 2007 we acquired the business operations of McAleer Computer Associates, Inc. We believe the acquisition of this leading provider of fund accounting based financial management software in Alabama fits within our acquisition strategy. McAleer and the acquisition transaction are discussed in more detail below under B. Recent Developments.

We are unable to predict the nature, size or timing of any acquisition. We can give no assurance that we will reach agreement or procure the financial resources necessary to fund any acquisition, or that we will be able to successfully integrate or improve returns as a result of any such acquisition. We continue to pursue and enter into preliminary discussions with various acquisition candidates. However, following the McAleer acquisition, the Company has not entered into agreements or understandings for any acquisitions which management deems material.

Our acquisition strategy is discussed in more detail under Item 1. Business H. Strategy Growth Through Acquisitions.

B. Recent Developments

Acquisition of McAleer Computer Associates, Inc.

On January 2, 2007, we consummated our previously announced acquisition of the business operations of McAleer. The transaction was structured as a purchase of substantially all of the assets of McAleer.

McAleer is the leading provider of fund accounting based financial management software, its major product, for the K-12 sector of the education market in the state of Alabama and has a presence in five other states. The acquisition expands our reach from our three primary state markets to an eight-state footprint in the southeast. We believe the acquisition constituted a major move in implementing our strategy of geographic expansion, with the ultimate goal of achieving a national presence. We also believe McAleer has a strong management team and a reputation for delivering quality customer service from its location in Mobile, Alabama. We utilize the existing McAleer staff to continue to service McAleer's existing clients from the offices in Mobile. We have capitalized on the addition of a new location in Mobile by delivering expanded software, technology and service offerings to the broader geographic area and the local government (city and county) markets. In contrast to our strategy, McAleer has not historically focused on the local government market or provided as broad a range of technology solutions.

The total purchase price for the purchased assets was \$4,050,000, of which \$3,525,000 was paid in cash at closing. The balance of \$525,000 was paid pursuant to a promissory note payable in twenty quarterly installments of principal in the amount of \$26,250, plus interest in arrears at the LIBOR rate, beginning March 31, 2007. In February 2007, we refinanced the \$525,000 note payable with \$486,000 in proceeds from a new real estate note with our bank and a draw on our revolver for the remaining amount. The new note is payable monthly based on a 7.85% interest rate and a 15 year amortization with a balloon payment due at the end of year three. The original \$525,000 note was and the new \$486,000 note is secured by a first mortgage on the real property of McAleer conveyed in the acquisition, consisting of the office building located in Mobile, Alabama from which our Mobile personnel operate. We assumed no liabilities of McAleer, other than certain leases and obligations of McAleer under ongoing customer contracts.

Expenses for the acquisition, in the amount of \$266,837, consisted of legal and professional fees and travel costs and various other expenses related to the acquisition transaction. These expenses have been capitalized and allocated to goodwill. We engaged an independent party to provide assistance with customary evaluations, analysis and allocation of the purchase price, which resulted in an allocation to goodwill. For the purposes of recording assets by segment, the acquired assets, including goodwill will be reported under the Software applications segment. The Company expects all goodwill will be deductible for tax purposes, and has an indefinite life for book purposes. The Deferred tax liability arises from a difference in the agreed to price for the building asset (tax basis) and the purchase price allocation (book basis included in Property and equipment and based on appraisal). Research and development assets acquired in the purchase were not material.

Table of Contents

The allocation of the purchase price, including capitalized acquisition expenses, was as follows (other liabilities assumed in the purchase were not deemed material):

Property and equipment	\$ 615,000
Computer software	610,000
Goodwill	1,480,587
Intangible assets	1,645,000
Deferred tax liability	(33,750)
 Total purchase price	 \$ 4,316,837

The detail of Computer software, other Intangible assets and Goodwill and their useful lives are as follows:

Asset	Value	Effective Useful Life
Computer software	\$ 610,000	4 years
Trade name	70,000	3 years
Covenants not-to-compete	75,000	5 years
Customer contracts and related relationships	1,500,000	20 years
 Other intangible assets	 1,645,000	
 Total computer software and other intangible assets	 \$ 2,255,000	 13.3 years*
 Goodwill	 \$ 1,480,587	 indefinite

* weighted average

We funded the acquisition in part with advances of approximately \$2.1 million under our modified credit facilities with our bank. We also utilized approximately \$1.3 million in cash from McAleer as, pursuant to the asset purchase agreement, service contract revenue with respect to 2007 for which cash was received by McAleer in 2006 prior to the closing was segregated for our account. Initially the owner accepted a \$525,000 note secured by the real estate for the remainder of the purchase price, which was subsequently refinanced, and the Company incurred expenses which were capitalized as a part of the transaction.

Sources of funds used in the transaction, including subsequent refinance activities and related expenses are as follows:

Proceeds from increase in long-term note payable secured by property and equipment (at time of purchase)	\$ 486,046
Proceeds from long-term note payable secured by real estate (for refinance of McAleer note)	486,000
Receipts on billings for McAleer 2007 support agreements earmarked for CSI	1,280,000
Draw on revolving credit facility (escrow payment at time of signing of definitive agreement)	100,000
Draw on revolving credit facility (at time of purchase including \$12,378 for acquisition related expenses)	1,671,332
Draw on revolving credit facility (for refinance of McAleer real estate note)	39,000
Payments of acquisition related expenses (funded from revolving credit facility)	254,459
 Subtotal of funds from revolving loan	 2,064,791
 Total purchase price	 \$ 4,316,837

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

The acquired McAleer operations added additional revenues of \$4.5 million to our software applications segment. McAleer is in the process of upgrading approximately 60% of its customers to the latest major release of the McAleer fund accounting system. These increases provide additional revenue due to the increased pricing structure to reflect the enhancements in the latest major release. Accordingly, while not estimable, we anticipate an ongoing improvement in our recurring revenues through this upgrade process.

Net of the increased depreciation and amortization of intangible assets based on the purchase price allocation, and financing costs of the transaction, McAleer added approximately \$200,000 to earnings in 2007 and was cash flow positive by approximately \$500,000, and added approximately \$700,000 to the Company's EBITDA and Adjusted EBITDA calculations. (EBITDA and Adjusted EBITDA are non-GAAP financial measures and should be considered in addition to, but not as substitutes for, the information prepared in accordance with accounting principles generally accepted in the United States (GAAP) provided in this report. Reconciliations from GAAP results to these non-GAAP financial measures are provided below under G. Liquidity and Capital Resources Non-GAAP Financial Measures: EBITDA and Adjusted EBITDA.)

McAleer and the acquisition transaction are discussed in more detail under Item 1. Business I. McAleer Acquisition, and in Note 2 McAleer Acquisition to our audited consolidated financial statements dated December 31, 2007.

Modification of Bank Credit Facilities

In 2005, in order to support the activities of the reverse acquisition, the Company entered into a line of credit facility with a bank whereby the Company could borrow up to 80% of accounts receivable balances, not to exceed the total facility limit of \$3.0 million. In the first quarter of 2006 and in January 2007, the facility was renewed and the limit increased to \$3.5 million and \$5.5 million, respectively. The primary purpose of these modifications was to increase the amount of the credit facilities to provide for expanding working capital and other credit needs, including funding the acquisition of substantially all of the assets and business operations of McAleer in early 2007. In May 2007, the Company extended the maturity date of the facility until September 15, 2007.

Table of Contents

On September 14, 2007, the Company entered into agreements with the bank renewing the line of credit facility. The terms of the agreements previously entered into were amended as follows:

the principal amount of the facility was increased from \$5.5 million to \$7.0 million;

the maturity date was extended from September 15, 2007 until June 30, 2009;

permissible purposes of the funds borrowed under the revolving facility were expanded to include funding short-term working capital and general corporate purposes of the Company; and

the definition of the borrowing base was expanded to include 50% of eligible inventory (with a maximum borrowing ability against eligible inventory of \$1,000,000), in addition to 80% of eligible accounts.

Other than the amendments noted above, the material obligations and provisions of the facility remain unchanged. The modifications also memorialized certain previously granted waivers to the restrictive covenants and requirements contained in the agreements with the bank. The bank granted waivers permitting us to enter into the acquisition of McAleer, including the use of bank credit facility advances to fund such acquisition, and incurring mortgage indebtedness to McAleer as a part of the purchase of McAleer's real estate. The bank also waived any cross-default relating to the subordinated notes payable to certain stockholders, which the Company did not repay at their May 2006 maturity.

Under our bank facility, eligible accounts receivable balances essentially include all of our trade accounts receivable except, in most cases, those accounts which are more than 90 days past due. Certain other accounts are excluded from eligibility for borrowing including: (i) accounts due from affiliates; (ii) accounts which we have determined to be of doubtful collectibility; and (iii) accounts due from any one of our customers if such accounts constitute more than 20% of the total eligible accounts. The loans bear interest at Libor plus 2.50%, (7.73% at December 31, 2007), payable monthly.

The loans under the revolving credit facility and the equipment facility, as well as all other obligations owed by the Company to the bank, are secured by a first priority security interest in substantially all of the Company's assets. Also, the Company is required to comply with certain covenants, including: providing periodic financial statements to the bank, compliance with SEC reporting requirements, allowing the bank to inspect its secured assets, and the Company maintaining its assets in good operating condition and maintaining sufficient insurance. Also, the Company is required to comply with certain financial covenants. The first financial covenant is a Debt Service Coverage Ratio, which is measured at the end of each year beginning December 31, 2007. This ratio is calculated by adding certain nonrecurring special items to EBITDA (Adjusted EBITDA), and then dividing by current maturities of long term debt plus interest expense. For the purposes of the amended loan agreement, EBITDA means the total of (i) net income from continuing operations (excluding extraordinary gains or losses), and to the extent deducted in determining net income (ii) interest expense, (iii) income taxes, and (iv) depreciation, depletion and amortization expenses. The Company is required to maintain a Debt Service Coverage Ratio of not less than 1.2 to 1.0. The second financial ratio is Funded Debt to EBITDA, which is also measured annually beginning December 31, 2007. A ratio of not greater than 2.5 to 1.0 is required. For the purposes of the ratio, Funded Debt generally means all obligations for borrowed money or for the deferred purchase price of property, and all capitalized lease obligations. Management believes the Company complied with these current covenants at December 31, 2007, and complied at December 31, 2006 with the previous, now expired agreements.

The amended loan agreement also contains certain restrictive covenants. These include general prohibitions on: disposing of property other than in the ordinary course of business; the Company changing its business; a change in control of the Company; mergers, acquisitions and the creation of new subsidiaries; the incurring of new indebtedness; the creation of new encumbrances or liens; investments, other than certain permitted investments in liquid investment grade paper; and the Company making loans, including loans to officers. Also, the amended loan agreement prohibits the Company from making any distributions (including any dividends on its common stock), or making any repurchases or redemptions of its capital stock, except to the extent there is no event of default either before or after any such distribution, repurchase or redemption. The bank may accelerate the Company's obligations under the amended loan agreement and the related promissory notes upon an event of default under the amended loan agreement. Events of default generally include the Company failing to make payments of principal or interest when due; defaults under loan covenants, subject to periods during which the Company may cure in certain cases; the Company becoming insolvent or being subject to certain bankruptcy proceedings, subject to certain time periods; and the occurrence of a material adverse change in the Company's business or financial condition. Upon an acceleration of the bank's loans to the Company, the bank, among other remedies, would have recourse to substantially all of the Company's assets through its security interest. There was \$575,000 and \$551,000 of

outstanding draws under the facility as of December 31, 2007 and 2006, respectively.

Table of Contents

Exercise of Warrants

On September 29, 2007, Barron exercised its Common Stock Purchase Warrant A-2 to purchase a total of 120,000 shares of common stock, which resulted in aggregate proceeds to the Company of \$84,000. In October 2007, on five separate occasions, Barron exercised the warrant to purchase a total of 933,800 shares of common stock, which resulted in aggregate proceeds to the Company of \$653,660. All of the warrant exercises were effectuated as part of a recapitalization of the Company in the first quarter of 2005 and at the exercise price of \$0.70 per share. We applied the proceeds against our revolving loan balance and may use the increase in availability under our line to fund, among other options, working capital needs, expansion opportunities or payment of a portion of the subordinated notes.

The warrants and the related Registration Rights Agreement are discussed in more detail under Item 1. Business E. The Merger and Recapitalization Description of Merger and Related Investment Transactions.

C. Current Challenges and Opportunities of our Business, and Forward-Looking Information

Bid and Sales Processes and Procedures

Because of our focus on the public sector, many sales opportunities are subject to our having to comply with government bid requirements and other formal proposal processes. Complying with such requirements and processes can result in a significant investment of time and effort that may not result in a sale. We have been implementing procedures to make the bid and sales process more efficient and believe these types of improvements will aid in our ability to maintain competitiveness in the marketplace.

Sarbanes-Oxley Compliance

As a public company we are required to maintain internal controls and processes related to addressing risks which are inherent in financial reporting, in compliance with the Sarbanes-Oxley Act. These controls must also be executed consistently and reviewed and tested for effectiveness on a periodic basis. The implementation, monitoring, testing and remediation of internal controls are a complex and costly endeavor. In the fourth quarter of 2007 and in the first quarter of 2008, prior to the issuance of this report, we completed our review of our control environment and the testing necessary to assure that our controls, established by year end 2007, were operating effectively for the closing cycle covered by this report. In this process we noted several areas where controls were not adequate to eliminate all significant deficiencies. For such areas, we established controls to address these inadequacies.

We have incurred costs to implement, and will incur additional costs to support ongoing efforts to comply with the Sarbanes-Oxley Act legislation. As of December 31, 2007, we had incurred approximately \$170,000 in expenses incurred with third party experts related to Sarbanes-Oxley work, and an additional approximately \$10,000 which was capitalized related to reporting systems implementation efforts. Added internal personnel resources to support Sarbanes-Oxley implementation efforts contributed to an increase in our reported salaries and wages of an additional approximately \$70,000. These amounts compare to third party costs of approximately \$120,000, \$80,000 in capitalized costs and personnel costs of approximately \$70,000 related to these efforts in 2006.

We have budgeted approximately \$300,000 for this work in 2008, including our efforts in early 2008 to improve our information technology environment and ongoing efforts to automate our financial reporting. This amount excludes the addition to ongoing increased internal personnel costs of approximately \$300,000 for positions necessary to support Sarbanes-Oxley. Approximately half of such salaries relate specifically to time spent to support Sarbanes-Oxley, and the remaining portion is necessary to support the ongoing requirements for improving business processes and supporting a growing organization. Such amounts are included in our budget for internal salaries and wages for 2008.

Due to the ongoing changes in our business, our acquisition strategy and the increasing complexity of reporting requirements and regulations, we can give no assurances that our costs for continuing Sarbanes-Oxley compliance will not increase. Also, we cannot guarantee that we will not in the future identify internal control deficiencies, or that we will be able to remediate any such deficiencies in a timely fashion.

Professional Fees

Our professional and legal compliance and litigation related costs (including third party costs related to our Sarbanes-Oxley implementation) totaled approximately \$694,000 for 2007, compared to our 2007 budget of \$850,000 and actual costs of \$609,000 in 2006. The budget and actual increases in 2007 over the prior year were due to additional costs in connection with efforts to automate portions of the Company's financial reporting processes using software purchased in late 2006 and for which final implementation is anticipated in 2008. Work related to securities registrations totaled approximately \$118,000 in 2007 compared to \$228,000 in 2006. This decrease was offset by small increases in a number of compliance related areas and the Sarbanes-Oxley and financial reporting related work. We have budgeted \$800,000 for compliance related

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

professional fees for 2008. This amount does not include any costs which will be incurred to close acquisitions, as we are cannot predict with any degree of certainty the timing and outcome of acquisition efforts.

Table of Contents

Software Modifications Required by Geographic Expansion

We have achieved the most significant penetration in the tri-state area of South Carolina, North Carolina and Georgia. We are now accelerating our efforts to move into surrounding states. To do so, we may have to modify our existing fund accounting programs to accommodate differences in state laws, regulations and taxation. We anticipate needing to make additional investment in software development to accomplish this. However, we plan to make the changes when we have firm orders in an area in an attempt to maximize return on investment as quickly as possible. We are currently converting our programs to the Microsoft .Net programming and SQL database language, but do not yet have all modules ready for release. As a result, some jurisdictional related changes have been made in 2007 and may be required to be made in both our current and .Net platforms through 2008, when we anticipate the large majority, if not all, modules will be converted. The costs of such changes may offset somewhat the positive impact from expanding our geographic reach significantly begun in early 2007 with the acquisition of McAleer.

Conversion of our Accounting+Plus software to Microsoft .Net Programming and SQL Database Language

We have already completed the conversion of the majority of our core accounting modules to Microsoft.Net Programming and SQL database language, with the personnel module still in progress. The completed modules are in formal beta installations. However, the changes resulting from the formal beta use have been limited. We are prepared to install and have installed some of the completed modules in select entities which do not have an immediate need for other integrated modules not yet converted. In addition, the completed modules have the functionality necessary to handle school activity funds, such as student clubs, organizations and athletics. Typically the personnel (payroll) module payroll is not needed to support school activity funds. Many school activity personnel use packages independent of the school's accounting packages, which may be cumbersome, or lack functionality. Accordingly, we are beginning to look for sales opportunities of the completed modules now, marketed as our School Activity solution. If the school later adopts our full accounting suite, the process of integration will be relatively seamless. We anticipate completing most if not all of the remaining modules throughout 2008.

Maintaining Margins

In 2007, we experienced a significant increase in sales of interactive whiteboard solutions and to a lesser degree sales of IP Telephony solutions, as well as increased sales of engineering services related to both product solutions. Both product lines, IP Telephony and interactive whiteboard solutions, have become subject to increased competition as more product manufacturers have recognized product potential and have entered these markets. Favorably, we saw only a slight decline in our margins from the Technology solutions segment in 2007 to 15.6% from 15.8% in 2006. However, in order to maintain and improve our margins, we need to continue to search for new and innovative, and initially higher margin, products to augment those that become mature, or we need to increase our revenues or our personnel utilization to achieve greater economies of scale. We also intend to continue our focus on existing higher margin areas such as engineering services and sales of software solutions and related services. While we cannot predict success in achieving these goals, as opportunities arise we take actions to maintain and improve our margins. These include expanding our geographic reach, increasing the size of and reorganizing our sales force to focus on more products backed by product specialists, increasing telemarketing efforts, improving our sales tools, and identifying additional product and service areas. We are focused on increasing margins, but ultimately we are looking to increase profits by leveraging existing and an increasing number of customer relationships by taking advantage of cross-sell opportunities with a variety of products and services. We will work to focus primarily on those customers for whom we can provide ongoing support and higher margin integration and other engineering services.

Additionally in 2007, a considerable percentage of the significant increase in sales of interactive whiteboard solutions related to a select number of large projects, initiated by school districts, involving their implementation of the new technology. Due to the size and nature of these projects, we were able to achieve certain economies of scale that resulted in substantially improved margins and increased gross profits. The challenge in 2008 and future periods will be to secure similar large opportunities or a greater number of smaller implementations. We have therefore developed a strategy focused on both large opportunities and a greater number of smaller opportunities. This strategy includes focusing certain members of our sales team's efforts specifically on the interactive whiteboard solution product line in an effort to increase market penetration and continue the growth of interactive whiteboard sales. We are also making efforts to take advantage of opportunities which may arise to expand our geographic reach with this product line. Prior to 2007, we were authorized to sell interactive whiteboard products by our partner on an exclusive basis in two states, South Carolina and North Carolina. In early 2008, we entered into an affiliate relationship with another vendor whereby we would participate in the opportunity to sell these solutions in certain counties within the state of Alabama.

Technology and Software Budgets

While federal, state and local funding can vary from year to year, and technology and software budgets have been challenged during the last few years, we have sensed a steady improvement in the discretionary funds that are available to our potential clients. These discretionary funds, coupled with our clients' desire to improve or implement technology and software tools into their individual environments, have provided growth for our business. We recognize that future changes in funding could improve or strain technology budgets. For example, a recession could result

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

in a decline in spending by our educational and local government client base. However, since such spending is generally based on tax revenues and portions of such revenues do not always correlate immediately or directly with changes in the economy, the impact is generally reduced when compared to the impact on those vendors whose client base consists primarily of private sector businesses. Even so, we cannot predict the impact changes in funding may have on our business.

Table of Contents

Creating Synergies with Merger and Acquisition Activity

Part of our strategy to remain competitive and to grow the Company involves taking advantage of acquisition opportunities. While there are many benefits to be gained from a successful acquisition, there are also many financial and operations risks that must be properly addressed in order to create operational synergy and financial benefit. While we may engage outside professionals to assist us with identifying and evaluating potential acquisitions, some members of our management team have limited experience in merger and acquisition activity. Management must be cautious in their evaluation of and expectations from any acquisition target. With any acquisition, we cannot ensure that we are allocating capital to businesses that will increase growth with higher returns and will not require additional capital or strain our capital resources.

We have identified the criteria listed below, by which we evaluate potential acquisition targets in an effort to gain the synergies necessary for successful growth of the Company:

Access to new customers and new geographic markets

Protection of our current customer base from competition

Removal or reduction of market entry barriers

Opportunity to gain operating leverage and increased profit margins

Diversification of sales by customer and/or product

Improved vendor pricing from increased volume and/or existing vendor relationships

Improvements in product/service offerings

Protection of and ability to expand mature product lines

Ability to attract public capital and increased investor interest

By carefully evaluating these factors, we seek to successfully execute our corporate acquisition growth strategy and thereby provide positive operating results and increased return on investment to our stockholders.

Forward-Looking Statements

This report contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Among other things, these statements relate to our financial condition, results of operations and future business plans, operations, opportunities and prospects. In addition, we and our representatives may from time to time make written or oral forward-looking statements, including statements contained in other filings with the Securities and Exchange Commission and in our reports to stockholders. These forward-looking statements are generally identified by the words or phrases may, could, should, expect, anticipate, plan, believe, seek, estimate, predict, project or words of similar import. These forward-looking statements are based upon our current knowledge, assumptions about future events and involve risks and uncertainties that could cause our actual results, performance or achievements to be materially different from any anticipated results, prospects, performance or achievements expressed or implied by such forward-looking statements. These forward-looking statements are not guarantees of future performance. Many factors are beyond our ability to control or

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

predict. You are accordingly cautioned not to place undue reliance on such forward-looking statements, which speak only as of the date that we make them. We do not undertake to update any forward-looking statement that may be made from time to time by or on our behalf.

We have included risk factors and uncertainties that might cause differences between anticipated and actual future results in Item 1A. Risk Factors. We have attempted to identify, in context, some of the factors that we currently believe may cause actual future experience and results to differ from our current expectations regarding the relevant matter or subject area. The operations and results of our software and systems integration businesses also may be subject to the effects of other risks and uncertainties, including, but not limited to:

a reduction in anticipated sales;

an inability to perform customer contracts at anticipated cost levels;

our ability to otherwise meet the operating goals established by our business plan;

market acceptance of our new software, technology and services offerings;

an economic downturn; and

changes in the competitive market place and/or customer requirements.

Table of Contents

D. Critical Accounting Policies and Estimates

The preparation of financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses, and related disclosures of contingent assets and liabilities. For a description of our significant accounting policies, see Note 1 contained in the explanatory notes to our audited consolidated financial statements as of and for the year ended December 31, 2007 included as part of this annual report. The most critical accounting policies that have a significant impact on the results we report in our consolidated financial statements are discussed below.

Revenue recognition

Software License Revenues

Software revenues consist principally of fees for licenses of our CSI Accounting+*Plus* software product, service and training. We recognize all software revenue using the residual method in accordance with Statement of Position (SOP)97-2, Software Revenue Recognition, as amended by SOP 98-9, Modification of SOP 97-2, and Software Revenue Recognition with Respect to Certain Transactions. Under the residual method, the fair value of the undelivered elements is deferred and the remaining portion of the arrangement fee is recognized as revenue. If evidence of the vendor specific fair value of one or more undelivered elements does not exist, revenues are deferred and recognized when delivery of those elements occurs or when fair value can be established. Company-specific objective evidence of fair value of maintenance and other services is based on our customary pricing for such maintenance and/or services when sold separately. At the outset of the arrangement with the customer, we defer revenue for the fair value of its undelivered elements (e.g., maintenance, consulting and training) and recognize revenue for the remainder of the arrangement fee attributable to the elements initially delivered in the arrangement (i.e., software product) when the basic criteria in SOP 97-2 have been met. If such evidence of fair value for each undelivered element of the arrangement does not exist, we defer all revenue from the arrangement until such time that evidence of fair value does exist or until all elements of the arrangement are delivered.

Under SOP 97-2, revenue attributable to an element in a customer arrangement is recognized when (i) persuasive evidence of an arrangement exists, (ii) delivery has occurred, (iii) the fee is fixed or determinable, (iv) collectibility is probable and (v) the arrangement does not require services that are essential to the functionality of the software.

Persuasive evidence of an arrangement exists. We determine that persuasive evidence of an arrangement exists with respect to a customer when we have a written contract, which is signed by both us and the customer, or a purchase order from the customer when the customer has previously executed a standard license arrangement with us.

Delivery has occurred. Our software may be either physically or electronically delivered to the customer. We determine that delivery has occurred upon shipment of the software pursuant to the billing terms of the agreement or when the software is made available to the customer through electronic delivery.

The fee is fixed or determinable. If at the outset of the customer engagement we determine that the fee is not fixed or determinable, we recognize revenue when the fee becomes due and payable.

Collectibility is probable. We determine whether collectibility is probable on a case-by-case basis. When assessing probability of collection, we consider the number of years in business, history of collection, and product acceptance for each customer. We typically sell to customers for whom there is a history of successful collection. However, collection cannot be assured.

We allocate revenue on software arrangements involving multiple elements to each element based on the relative fair value of each element. Our determination of the fair value of each element in multiple-element arrangements is based on vendor-specific objective evidence (VSOE). We align our assessment of VSOE for each element to the price charged when the same element is sold separately. We have analyzed all of the elements included in our multiple-element arrangements and determined that we have sufficient VSOE to allocate revenue to the maintenance, support and professional services components of our perpetual license arrangements. We sell our professional services separately, and have established VSOE for professional services on that basis. VSOE for maintenance and support is determined based upon the customer's annual renewal rates for these elements. Accordingly, assuming that all other revenue recognition criteria are met, we recognize revenue from perpetual licenses upon delivery using the residual method in accordance with SOP 98-9.

Our software products are fully functional upon delivery and implementation and do not require any significant modification or alteration of products for customer use.

We expense all manufacturing, packaging and distribution costs associated with software license sales as cost of license revenues.

Table of Contents

Computer Hardware Sales Revenues

Revenue related to hardware sales is recognized when: (a) we have a written sales agreement; (b) delivery has occurred; (c) the price is fixed or determinable; (d) collectibility is reasonably assured; (e) the product delivered is standard product with historically demonstrated acceptance; and (f) there is no unique customer acceptance provision or payment tied to acceptance of an undelivered element significant to the functionality of the system. Generally, payment terms are net 30 days from shipment. When sales to a customer involve multiple elements, revenue is recognized on the delivered element provided that (1) the undelivered element is a standard product, (2) there is a history of acceptance on the product with the customer, and (3) the undelivered element is not essential to the customer's application. Revenue related to spare parts is recognized on shipment. Shipping and handling charges to customers are included in revenues. Shipping and handling costs incurred by the Company are included in cost of sales.

Technology revenues are generated primarily from the sale of hardware. In accordance with Emerging Issues Task Force (EITF) 99-19, Reporting Revenue Gross as a Principal Versus Net as an Agent, we record revenues as net when we serve as an agent. In these circumstances, our supplier pays a commission to us but acts as the primary obligor in a transaction and we record only the commission in revenues. We record revenues as gross (generally cost of merchandise plus margin) when we serve as a principal whereby we act as the primary obligor in a transaction, have the latitude for establishing pricing and retain all the credit risk associated with such transaction.

Long-term Payment Arrangements

Our primary customer base consists of local government and education entities whose source of funding (local taxes and federal funding) is generally assured; accordingly the risk of uncollectibility is lower than that of businesses selling primarily to non-government entities. The Company has an ongoing practice of providing financing for certain purchases under notes receivable or long term leases typically ranging from 3 to 5 years, subject to review of its exposure under such facilities and cash flow availability or needs at the time of such purchases. Such amounts have not constituted a significant portion of its account balances, and the Company has historically never experienced a default under such arrangements. The Company recognizes revenue under these arrangements when the criteria noted under Software License Revenues and Computer Hardware Sales Revenues above is met, in accordance with SOP 97-2, as amended by SOP 98-9.

Service/Support Revenues

Services revenues consist of professional services and maintenance fees from software and hardware maintenance agreements. Maintenance agreements are typically priced based on a percentage of the product license fee or hardware cost and have a one-year term, renewable annually. Services provided to customers under maintenance agreements may include technical product support and unspecified software upgrades. Revenue related to maintenance and service contracts is recognized ratably over the duration of the contracts. Deferred revenues from advanced payments for maintenance agreements are recognized ratably over the term of the agreement, which is typically one year.

Long-Lived Assets

Expenditures for major renewals or betterments that extend the useful lives of property and equipment are capitalized. Expenditures for maintenance and repairs are charged to expenses as incurred.

We continually evaluate whether events and circumstances have occurred that indicate the remaining estimated useful life of long-lived assets may warrant revision or that the remaining balance of long-lived assets may not be recoverable in accordance with SFAS No. 144, Accounting for Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed of. When factors indicate that long-lived assets should be evaluated for possible impairment, we use an estimate of the related undiscounted future cash flows over the remaining life of the long-lived assets in measuring whether they are recoverable. If the estimated undiscounted future cash flows exceed the carrying value of the asset, a loss is recorded as the excess of the asset's carrying value over fair value.

Depreciation

Depreciation of property and equipment is provided using the straight-line method over the estimated useful lives of such property and equipment.

Computer Software Costs and Amortization

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Computer software costs consist of internal software production costs and purchased software products capitalized under the provisions of SFAS No. 86, Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed. Costs in the research and development of new software products where the technological feasibility is unknown and enhancements which do not prolong the software life or otherwise increase its value, are expensed as incurred. Capitalized computer software costs are amortized over the economic life of the product, generally three years, using the straight-line method. Our software development efforts focus on the implementation of known technological capabilities applied to common business processes to enhance our existing products. Historically, to date, through our software solutions segment, we have spent no material efforts on technological innovation for which the feasibility has been unknown.

57.3% increase in the Software applications segment and 24.5% increase in total gross profit over the prior year.

needs to periodically exceed the short-term fluctuations in cash flow from operations. Accordingly, we use debt

and equity vehicles in addition to cash flow from operations to fund our growth and working capital needs. Currently our working capital is provided under our \$7.0 million revolving line of credit.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

\$525,000 to be paid pursuant to a promissory note in 20 quarterly installments of principal in the amount of \$26,250 plus interest in arrears at the LIBOR rate, beginning March 31, 2007. (This amount was refinanced with the real estate note and a small draw on our credit facilities in February 2007, as discussed under [Increase in Bank Credit Facilities](#) above).

Acquisition expenses were \$267,000 for legal and professional fees, travel costs and various other related expenses. The expenses were capitalized and allocated to goodwill.

We assumed no liabilities of McAleer, other than certain leases and obligations of McAleer under ongoing customer contracts.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Years Ended December 31, 2007 and 2006

EBITDA increased 906.1% or \$4.3 million to \$4.8 million for the year ended December 31, 2007, compared to EBITDA of \$0.5 million reported for the same period in 2006. The EBITDA increase was primarily due to the increase in operating income over the prior year and a larger add back for increased depreciation and amortization with the write-up to fair value of assets from the McAleer

Table of Contents

Reverse acquisition related option redemption costs		
Net unrealized loss on warrants		329
Reverse merger related litigation costs		
Adjusted (Financing) EBITDA	\$ 4,881	\$ 1,775

Future Capital Needs and Resources*Credit Facilities*

Prior to our going public through the reverse merger, we funded operations through cash flow from operations. Substantially all of our cash was distributed to the founders in exchange for distributing ownership. Accordingly, we now use primarily our working capital facility and term loans to fund our operations. See [Increase in Bank Credit Facilities](#) above and Note 7 to our audited consolidated financial statements dated December 31, 2007 for details of recent activity under and terms of these facilities.

Our current credit facilities consist of:

\$7.0 million revolving line of credit, of which \$0.6 million was drawn and \$4.4 million available December 31, 2007, which bears interest at LIBOR plus 2.5% and matures June 30, 2009;

\$800,000 equipment note, of which approximately \$0.6 million was outstanding at December 31, 2007, which bears interest at 7.85%, and has a three year amortization maturing in January 2010;

\$486,000 real estate note, of which approximately \$0.5 million was outstanding at December 31, 2007, which bears interest at 7.85%, and has a payment based on a 15 year amortization with a balloon payment due in January 2010; and

\$2.3 million in subordinated notes to Barron Partners and the five founding shareholders, of which \$2.3 million remained outstanding at December 31, 2007. (In order to conserve capital and borrowing capacity, we refrained from repaying the \$2.3 million in subordinated notes upon their maturity in May 2006. The noteholders have cooperated with our deferral of repayment, which is discussed in more detail below.)

Future Capital Needs

Set forth below are factors which management believes could have a significant impact on our future cash and capital needs and resources.

Ongoing capital resources depend on a variety of factors, including:

\$4.4 million available to our operations at December 31, 2007, under our \$7.0 million line of credit;

inventory purchase commitments in 2008 of \$12.3 million;

Table of Contents

burden of professional and legal compliance costs;

the anticipated level of capital expenditures for 2008 of \$800,000;

software development costs of approximately \$1.1 million;

our scheduled debt service;

continued cooperation as to the deferral of payment on our subordinated debt;

potential future acquisitions; and

potential capital inflow from warrants exercise and the possibility warrant exercises and related proceeds may not be fully realized. The above items are described in more detail below.

Factors Affecting Capital Needs and Resources:

Credit Facilities. Absent a significant cash inflow from the cash exercise of the warrants or otherwise, and in light of our growth and acquisition strategy, for the foreseeable future we will rely on a line of credit and borrowing facilities.

While we have drawn on our line significantly and paid it down from time to time, we cannot guarantee that cash flow from operations will be sufficient to repay our line of credit facility at the time it is due and adequately fund our growing working capital needs. In the alternative, we would attempt to refinance the credit facility with another lender. Although management currently believes that our existing lender will agree to a renewal of the facility, there can be no assurance that our bank will in fact do so or that replacement financing could be procured by us on favorable terms or at all. Further, any failure to resolve our default under or otherwise restructure the subordinated notes, or to maintain the cooperation of the holders of such notes, could negatively impact our ability to renew our existing bank credit facility or procure a replacement. Without such a credit facility, we believe that our ability to fund our business operations, including providing sufficient working capital to fund sales growth, could be adversely affected.

Expected cash flow from operations. In addition to financing sources, our operating cash flow is a significant source for us to meet our future capital needs. Our ability to generate sufficient operating cash flow is dependent upon, among other things:

the amount of revenue we are able to generate and collect from our customers;

the amount of operating expenses required to provide our services;

the cost of acquiring and retaining customers; and

our ability to continue to grow our customer base.

In 2007, the Company experienced significant improvement in its cash flow from operations, increasing \$1.1 million to \$4.1 million compared to the prior year's \$3.0 million. Net of needs for other financing activities and scheduled debt retirement, this placed the Company in the position of repaying the short-term portion of borrowings used in connection with the McAleer acquisition, in part or \$1.1 million, from cash provided by

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

operations, while the remaining \$0.7 million was provided from the exercise of warrants. This improvement was also made possible from the acquisition of McAleer which historically bills the largest portion of its annual support agreements in the fourth quarter of each year and receives some additional cash by year end, with the remainder collected in the first quarter. Our projections as to the acquisition of McAleer were that it would be cash flow positive, that is it would fund its own debt service, and in fact it has done so. As a result, we see risk associated with the cost of the McAleer acquisition as substantially behind us and continuing improvements in our cash position long-term. This assessment does not take into account additional capital related to additional acquisitions, and it assumes growth does not significantly outpace our expectations. It also assumes we are able to effectively and timely control our costs if impacted significantly by an economic downturn, and we retain our ongoing ability to secure asset-based financing to fund our growth. Our primary reasons for pursuing other financing and equity capital are to reduce short-term economic risk relating to past and future acquisitions, and to repay our subordinated notes (potentially as part of funding an acquisition).

Purchase Commitments. The majority of our purchase commitments are based on firm purchase orders. However, from time to time we commit to purchase product in advance of customer commitments and as inventory to obtain volume pricing discounts or operational efficiencies. Currently we have purchase order commitments to Promethean, one of our major suppliers, for interactive whiteboard inventory of \$12.3 million in 2008. We have no other significant purchase commitments based on estimates of customer demand that significantly exceed customer commitments. If actual customer demand were to differ significantly either in timing or volume from the purchase commitments, this could strain our available working capital resources. While management anticipates its purchase commitments will not differ significantly from its estimates of customer demand, there can be no assurance that this will in fact be the case.

Burden of Professional and Legal Compliance Costs. For the year ended December 31, 2007, professional and legal compliance and litigation costs, excluding stock-based (non-cash) compensation, totaled \$694,000. These related primarily to compliance costs of operating as a public company, as well as legal and accounting costs for the registration of shares pursuant to the registration rights

the future market prices of our securities.

Table of Contents

There is no guarantee CSI could obtain access to additional funding or at reasonable rates. The failure of CSI to meet covenant requirements, raise capital through the exercise of the warrants or find or obtain other funding at reasonable rates, could have a negative impact on our business.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk.

Not applicable.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of

Computer Software Innovations, Inc. and Subsidiary

Easley, South Carolina

We have audited the accompanying consolidated balance sheets of Computer Software Innovations, Inc. and Subsidiary as of December 31, 2007 and 2006 and the related consolidated statements of operations, changes in shareholders' equity (deficit), and cash flows for each of the years then ended. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Computer Software Innovations, Inc. and Subsidiary as of December 31, 2007 and 2006 and the results of their operations and their cash flows for each of the years then ended in conformity with United States generally accepted accounting principles.

We were not engaged to examine management's assertion about the effectiveness of Computer Software Innovations, Inc. and Subsidiary's internal control over financial reporting as of December 31, 2007 and, accordingly, we do not express an opinion thereon.

/s/ Elliott Davis, LLC

Greenville, South Carolina

COMPUTER SOFTWARE INNOVATIONS, INC. AND SUBSIDIARY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES AND ACTIVITIES

Organization

Computer Software Innovations, Inc. (formerly VerticalBuyer, Inc.) (the Company, CSI or we), a Delaware corporation, was incorporated on September 24, 1999. The Company currently trades in the over the counter market and is reported on the OTC Bulletin Board under the symbol CSWI.OB.

In the first quarter of 2005, we concluded a series of recapitalization transactions which began January 31, 2005 with a change in control due to the purchase of a majority of our common stock by Computer Software Innovations, Inc., a South Carolina corporation (CSI South Carolina). These transactions culminated on February 11, 2005 with the merger of CSI South Carolina into us, our issuance of preferred stock, common stock, warrants and certain subordinated notes, and the change of our name to Computer Software Innovations, Inc.

On January 2, 2007, we purchased substantially all of the assets and business operations of McAleer Computer Associates, Inc. (McAleer). The total price for the assets acquired was \$4,050,000. Details on the acquisition are described in Note 2 McAleer Acquisition.

Description of business

The Company is engaged in the business of development and sales of internally developed software, sales and distribution of computers, network and communications hardware and accessories, as well as interactive collaborative classroom technologies and other hardware based solutions.

The Company's internally developed software consists of fund accounting based financial management software and standards-based lesson planning software. The Company's primary software product, fund accounting based financial management software, is developed for those entities that track expenditures and investments by fund, or by source and purpose of the funding. The fund accounting software is used primarily by public sector and not-for-profit entities. The Company's standards-based lesson planning software is designed to allow teachers to create lesson plans that are tied to a state's curriculum standards. These lesson plans may be reviewed by administrators and a report generated to determine the standards that have been met or need to be met. The lesson plans can be stored, shared, and retrieved for collaboration, editing and future use.

In connection with its hardware-based solutions, the Company provides a wide range of technology products and services including hardware and design, engineering, installation, training and ongoing support and maintenance. Technology solutions include computers, networking, security, IP telephony, interactive whiteboard solutions and integrated accessories, distance learning and video communication. The Company currently markets its products and services primarily to a wide variety of education and local government agencies, and not-for-profit entities in the southeastern United States. The majority of the Company's business is with K-12 (kindergarten through grade 12) public education and local government entities.

Basis of presentation

The consolidated financial statements include CSI Technology Resources, Inc., a wholly-owned subsidiary. CSI Technology Resources, Inc. was acquired by CSI on May 1, 2000 and became the technology solutions segment of CSI. This subsidiary no longer has any significant operations or separate accounting, as all activities are now accounted for within CSI, except that certain vendor contracts are still in the name of CSI Technology Resources, Inc. At a future date, the name on these contracts may be converted and the subsidiary deactivated, subject to a review of any tax or legal implications. As the Company files a consolidated tax return and has been accounting for all activities through the parent, there should be no financial or tax implications related to the formal procedures which would be undertaken to deactivate the subsidiary. Intercompany balances and transactions have been eliminated. The Company uses the accrual basis of accounting.

Use of estimates

The accounting and reporting policies conform to accounting principles generally accepted in the United States of America (generally accepted accounting principles or GAAP). GAAP requires us to make estimates, assumptions and judgments and to rely on projections of future results of

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

operations and cash flows. Those estimates, assumptions, judgments and projections are an integral part of the financial statements. We base our estimates and assumptions on historical data and other assumptions, which include knowledge and experience with regard to past and current events and assumptions about future events that we believe are reasonable under the circumstances. These estimates and assumptions affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities in our financial statements. In addition, they affect the reported amounts of revenues and expenses during the reporting period.

Table of Contents

Our judgments are based on our assessment as to the effect certain estimates, assumptions of future trends or events may have on the financial condition and results of operations reported in our financial statements. Actual results could differ materially from these estimates, assumptions, projections and judgments.

Disclosure regarding segments

The Company reports its operations under two operating segments: the software applications segment and the technology solutions segment.

Cash and cash equivalents

The Company considers all highly liquid investments purchased with original maturities of three months or less to be cash equivalents. At times balances may exceed federally insured amounts. Bank overdrafts of \$78,974 and \$336,928 as of December 31, 2007 and 2006, respectively, have been reclassified to accounts payable.

Accounts receivable

The Company generally performs credit evaluations of its customer's financial condition as deemed necessary. The Company sells primarily to local government and education entities whose source of funding (local taxes and federal funding) is generally assured; accordingly the risk of uncollectibility is lower than that of businesses selling primarily to non-government entities. In general, receivables are due 30 days after the issuance of the invoice. The Company provides an allowance for doubtful accounts, based upon a review of outstanding receivables, which can include a review of payment history, credit history and current financial condition. Credit is granted to substantially all customers on an unsecured basis. In addition, the Company provides a sales returns allowance, which is estimated based upon a percentage of sales, derived from historical data of such returns.

Inventories

Inventories consist of finished goods purchased for resell from third party vendors and a small amount of service inventory that can be used to provide support services to customers of the Company. Inventories are valued at the lower of historic cost or net realizable value using the first-in, first-out method. The Company is generally able to limit the amount of inventory it has to carry through direct shipment from its suppliers to its customers. However, at times large shipments of inventory may be in transit or not all parts may have been received sufficient for delivery to be consummated or collectibility assured, in which case a significant amount of inventory may be recorded in the Company's financial statements. Additionally, from time to time the Company takes advantage of bulk purchase opportunities for quantity discounts on high-volume sales items to reduce its costs. Typically such inventories are only carried for a few weeks. As of December 31, 2007 and 2006, the Company had finished goods on hand that amounted to \$470,485 and \$2,569,382, respectively.

Revenue recognition

Software License Revenues

Software revenues consist principally of fees for licenses of our CSI Accounting+*Plus* software product, service and training. We recognize all software revenue using the residual method in accordance with Statement of Position (SOP) 97-2, Software Revenue Recognition, as amended by SOP 98-9, Modification of SOP 97-2, and Software Revenue Recognition with Respect to Certain Transactions. Under the residual method, the fair value of the undelivered elements is deferred and the remaining portion of the arrangement fee is recognized as revenue. If evidence of the vendor specific fair value of one or more undelivered elements does not exist, revenues are deferred and recognized when delivery of those elements occurs or when fair value can be established. Company-specific objective evidence of fair value of maintenance and other services is based on our customary pricing for such maintenance and/or services when sold separately. At the outset of the arrangement with the customer, we defer revenue for the fair value of its undelivered elements (e.g., maintenance, consulting and training) and recognize revenue for the remainder of the arrangement fee attributable to the elements initially delivered in the arrangement (i.e., software product) when the basic criteria in SOP 97-2 have been met. If such evidence of fair value for each undelivered element of the arrangement does not exist, we defer all revenue from the arrangement until such time that evidence of fair value does exist or until all elements of the arrangement are delivered.

Under SOP 97-2, revenue attributable to an element in a customer arrangement is recognized when (i) persuasive evidence of an arrangement exists, (ii) delivery has occurred, (iii) the fee is fixed or determinable, (iv) collectability is probable and (v) the arrangement does not require services that are essential to the functionality of the software.

Table of Contents

Persuasive evidence of an arrangement exists. We determine that persuasive evidence of an arrangement exists with respect to a customer when we have a written contract, which is signed by both us and the customer, or a purchase order from the customer when the customer has previously executed a standard license arrangement with us.

Delivery has occurred. Our software may be either physically or electronically delivered to the customer. We determine that delivery has occurred upon shipment of the software pursuant to the billing terms of the agreement or when the software is made available to the customer through electronic delivery.

The fee is fixed or determinable. If at the outset of the customer engagement we determine that the fee is not fixed or determinable, we recognize revenue when the fee becomes due and payable.

Collectability is probable. We determine whether collectability is probable on a case-by-case basis. When assessing probability of collection, we consider the number of years in business, history of collection, and product acceptance for each customer. We typically sell to customers for whom there is a history of successful collection. However, collection cannot be assured.

We allocate revenue on software arrangements involving multiple elements to each element based on the relative fair value of each element. Our determination of the fair value of each element in multiple-element arrangements is based on vendor-specific objective evidence (VSOE). We align our assessment of VSOE for each element to the price charged when the same element is sold separately. We have analyzed all of the elements included in our multiple-element arrangements and determined that we have sufficient VSOE to allocate revenue to the maintenance, support and professional services components of our perpetual license arrangements. We sell our professional services separately, and have established VSOE for professional services on that basis. VSOE for maintenance and support is determined based upon the customer's annual renewal rates for these elements. Accordingly, assuming that all other revenue recognition criteria are met, we recognize revenue from perpetual licenses upon delivery using the residual method in accordance with SOP 98-9.

Our software products are fully functional upon delivery and implementation and do not require any significant modification or alteration of products for customer use.

We expense all manufacturing, packaging and distribution costs associated with software license sales as cost of license revenues.

Computer Hardware Sales Revenues

Revenue related to hardware sales is recognized when: (a) we have a written sales agreement; (b) delivery has occurred; (c) the price is fixed or determinable; (d) collectability is reasonably assured; (e) the product delivered is standard product with historically demonstrated acceptance; and (f) there is no unique customer acceptance provision or payment tied to acceptance or an undelivered element significant to the functionality of the system. Generally, payment terms are net 30 days from shipment. When sales to a customer involve multiple elements, revenue is recognized on the delivered element provided that (1) the undelivered element is a standard product, (2) there is a history of acceptance on the product with the customer, and (3) the undelivered element is not essential to the customer's application. Revenue related to spare parts is recognized on shipment. Shipping and handling charges to customers are included in revenues. Shipping and handling costs incurred by the Company are included in cost of sales.

Technology revenues are generated primarily from the sale of hardware. In accordance with Emerging Issues Task Force (EITF) 99-19,

Reporting Revenue Gross as a Principal Versus Net as an Agent, we record revenues as net when we serve as an agent. In these circumstances, our supplier pays a commission to us but acts as the primary obligor in a transaction and we record only the commission in revenues. We record revenues as gross (generally cost of merchandise plus margin) when we serve as a principal whereby we act as the primary obligor in a transaction, have the latitude for establishing pricing and retain all the credit risk associated with such transaction.

Long-term Payment Arrangements

Our primary customer base consists of local government and education entities whose source of funding (local taxes and federal funding) is generally assured; accordingly the risk of uncollectibility is lower than that of businesses selling primarily to non-government entities. The Company has an ongoing practice of providing financing for certain purchases under notes receivable or long term leases typically ranging from 3 to 5 years, subject to review of its exposure under such facilities and cash flow availability or needs at the time of such purchases. Such amounts have not constituted a significant portion of account balances, and the Company has historically never experienced a default under such arrangements. The Company recognizes revenue under these arrangements when the criteria noted under Software License Revenues and Computer Hardware Sales Revenues above is met, in accordance with SOP 97-2, as amended by SOP 98-9.

Table of Contents***Service/Support Revenues***

Services revenues consist of professional services and maintenance fees from software and hardware maintenance agreements. Maintenance agreements are typically priced based on a percentage of the product license fee or hardware cost and have a one-year term, renewable annually. Services provided to customers under maintenance agreements may include technical product support and unspecified software upgrades. Revenue related to maintenance and service contracts is recognized ratably over the duration of the contracts. Deferred revenues from advanced payments for maintenance agreements are recognized ratably over the term of the agreement, which is typically one year.

Warranties

The Company's suppliers generally warrant the products distributed by the Company and allow returns of defective products, including those that have been returned to the Company by its customers. The Company does not independently warrant the products it distributes; however, the Company does warrant its services with regard to products that it configures for its customers and products that it builds from components purchased from other sources. Warranty expense is not material to the Company's consolidated financial statements.

Vendor programs

The Company receives volume incentives and rebates from certain manufacturers related to sales of certain products, which are recorded as a reduction of cost of sales when earned. The Company also receives manufacturer reimbursement for certain promotional and marketing activities that offset expenses incurred by the Company.

Long-Lived Assets

Expenditures for major renewals or betterments that extend the useful lives of property and equipment are capitalized. Expenditures for maintenance and repairs are charged to expenses as incurred.

We continually evaluate whether events and circumstances have occurred that indicate the remaining estimated useful life of long-lived assets may warrant revision or that the remaining balance of long-lived assets may not be recoverable in accordance with Statement of Financial Accounting Standards (SFAS) No. 144, Accounting for Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed of. When factors indicate that long-lived assets should be evaluated for possible impairment, we use an estimate of the related undiscounted future cash flows over the remaining life of the long-lived assets in measuring whether they are recoverable. If the estimated undiscounted future cash flows exceed the carrying value of the asset, a loss is recorded as the excess of the asset's carrying value over fair value.

Depreciation

Depreciation of property and equipment is provided using the straight-line method over the following estimated useful lives:

Classification	Useful life (years)
Furniture	7
Computer equipment	3
Office equipment	3
Leasehold improvements	3

Computer Software Costs and Amortization

Computer software costs consist of internal software production costs and purchased software products capitalized under the provisions of SFAS No. 86, Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed. Costs in the research and development of new software products where the technological feasibility is unknown, and enhancements which do not prolong the software life or otherwise increase its value, are expensed as incurred. Capitalized computer software costs are amortized over the economic life of the product, generally three years, using the straight-line method. Our software development efforts focus on the implementation of known technological capabilities applied to common business processes to enhance our existing products. Historically, to date, through our software solutions segment, we have spent no material efforts on technological innovation for which the feasibility has been unknown.

Table of Contents**Goodwill**

The Company follows SFAS No. 142, Goodwill and Other Intangible Assets, in our accounting and reporting for goodwill and intangible assets.

SFAS No. 142 eliminates the requirement to amortize intangible assets with an indefinite life, addresses the amortization of intangible assets with a defined life, and addresses impairment testing and recognition of indefinite-lived intangible assets. In accordance with SFAS No. 142, we do not amortize indefinite-lived intangible assets (e.g., corporate trademarks for which planned use is indefinite). As of December 31, 2007, we had approximately \$1.5 million of goodwill. In accordance with SFAS No. 142 we are required to test for the impairment of goodwill and other intangible assets with indefinite lives on at least an annual basis. Our goodwill impairment test involves a comparison of the fair value to its carrying amount. If the fair value is determined to be less than the carrying value, the asset is considered impaired. We tested goodwill for impairment as of December 31, 2007 and will test it annually on December 31 unless changes occur between annual test dates that would more likely than not reduce the fair value of a reporting unit below its carrying amount. Our 2007 impairment test indicated that goodwill was not impaired.

In addition, we evaluate the remaining useful life of other intangible assets that are not being amortized each reporting period to determine whether events and circumstances continue to support an indefinite useful life. If an intangible asset that is not being amortized is subsequently determined to have a finite useful life, we amortize the intangible asset prospectively over its remaining estimated useful life. Amortizable intangible assets (e.g., product trademarks) are amortized on a straight-line basis over six years or the life of the product, whichever is shorter. As of December 31, 2007, the intangible assets classified as indefinite lived assets total \$1.5 million, including goodwill and corporate trademarks.

Other Intangible Assets

In connection with the acquisition of McAleer, we allocated approximately \$1.7 million in value to intangible assets. The estimated fair value of these acquired intangible assets is based upon an independent valuation, and is being amortized over the life of the assets. As of December 31, 2007, the intangible assets had a carrying value of \$1.6 million, net of accumulated amortization of \$0.1 million, and are included in Other intangible assets, net on the Consolidated Balance Sheet. See Note 2 for further detail regarding the intangible assets related to the McAleer acquisition

Amortization expense was approximately \$117,000 for the year ended December 31, 2007 and \$2,000 for the year ended December 31, 2006. Future estimated amortization expense for the carrying amount of intangible assets as of December 31, 2007 is expected to be as follows (in thousands):

Year	Amortization Expense
2008	\$ 117
2009	117
2010	94
2011	94
2012 & beyond	1,126
Total	\$ 1,548

Income taxes

The Company uses the asset and liability method of accounting for income taxes. Income taxes are provided for the tax effects of transactions reported in the financial statements and consist of taxes currently due or refundable plus deferred income tax assets and liabilities. Deferred income tax assets and liabilities are recorded to recognize the income tax effect of the temporary differences in the method of reporting various items of income and expenses for financial reporting purposes and income tax purposes.

The deferred income tax assets and liabilities at the end of the year are determined using the statutory tax rates expected to be in effect when the taxes are actually due or refundable.

Effective January 1, 2007, we adopted Financial Accounting Standards Board (FASB) Interpretation No. 48 (FIN 48), Accounting for Uncertainty in Income Taxes an Interpretation of FASB Statement No. 109 which requires that a position taken or expected to be taken in a tax return be recognized in the financial statements when it is more likely than not (i.e., a likelihood of more than fifty percent) that the position

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

would be sustained upon examination by tax authorities. A recognized tax position is then measured at the largest amount of benefit that is greater than fifty percent likely of being realized upon settlement. Upon adoption, we found there to be no impact.

Table of Contents**Fair value of financial instruments**

The Company's financial instruments include cash equivalents, accounts receivable, accounts payable, short-term debt and notes payable. The carrying values of cash equivalents, accounts receivable and accounts payable approximate their fair value because of the short maturity of these instruments. The carrying amount of the Company's bank borrowings under its credit facility approximates fair value because the interest rates are reset periodically to reflect current market rates. The fair value of the Company's long-term notes payable depends primarily on current market interest rates for debt issued with similar maturities by companies with risk profiles similar to the Company. The fair value of the Company's bank line of credit is assumed to be approximately equal to the carrying value since the interest rate on the on the line of credit obligation is adjustable based on the LIBOR rate.

Marketing, Business Promotion and Advertising

Marketing, business promotion and advertising costs are expensed as incurred. Such costs amounted to \$140,024 and \$116,661 for the years ended December 31, 2007 and 2006, respectively.

Earnings (loss) per share

Basic earnings (loss) per share are computed by dividing net income (loss) by the weighted average number of common stock shares outstanding during the period. Diluted earnings (loss) per share is computed by dividing net income (loss) by the weighted average number of common and potential common shares outstanding during the period following application of the treasury stock method. The table below presents the weighted average shares outstanding for the year ended December 31, 2007 and 2006, both prior to and after application of the treasury stock method.

	For the Years Ended December 31,	
	2007	2006
Weighted Average Shares Outstanding Prior to Application of the Treasury Stock		
Method		
Common stock	3,809,026	3,236,327
Preferred stock	6,926,322	7,048,750
Warrants	6,970,947	7,217,736
Options	302,506	268,343
Total Weighted Average Shares Outstanding	18,008,801	17,771,156
Weighted Average Shares Outstanding After Application of the Treasury Stock		
Method		
Common stock	3,809,026	3,236,327
Preferred stock	6,926,322	7,048,750
Warrants	1,238,863	1,539,459
Options	224,220	253,625
Total Weighted Average Shares Outstanding treasury stock method	12,198,431	12,078,161

GAAP requires that in the case of thinly traded stock, management assess, among other factors, whether the market quoted price is representative of the price that would be effective were all shares issued in connection with various transactions, which would include the issuance of significant additional shares in dilutive transactions. Following consultation with accounting and valuation experts and applying the principle of conservatism, which is a basis of the dilution calculation under GAAP, management uses the higher of an income statement performance and cash flow indicator based stock value computation based on comparisons to peer public companies, or the quoted market price, on a weighted average basis, for the repurchase of shares under the treasury stock method in the diluted earnings (loss) per share calculation. Once management, in consultation with its accounting and financial experts, considers the stock no longer thinly traded, management will use the quoted market price exclusively.

The potential common shares were used in the calculation of diluted earnings per share for the year ended December 31, 2007, but were not used in the calculation of diluted loss per share for the year ended December 31, 2006 as the effect was anti-dilutive due to the net loss reported for the period.

NOTE 2 MCALEER ACQUISITION

On January 2, 2007, the Company consummated its acquisition of the business operations of McAleer. The transaction was structured as a purchase of substantially all of the assets of McAleer.

The total price for the purchased assets was \$4,050,000, of which \$3,525,000 was paid in cash at closing. The balance of \$525,000 was to be paid pursuant to a promissory note to the owner, William McAleer, in twenty quarterly installments of principal in the amount of \$26,250, plus interest in arrears at the LIBOR rate, beginning March 31, 2007. The note was secured by a first mortgage on the real property of McAleer conveyed in the acquisition, consisting of the office building located in Mobile, Alabama from which the

Table of Contents

Mobile personnel operate. The Company assumed no liabilities of McAleer, other than certain operating leases and obligations under ongoing customer contracts. On February 8, 2007, the Company repaid the note to William McAleer by financing the real estate through a mortgage note with its bank in the amount of \$486,000 (the terms of which are discussed below under Note 7 Long-term and Short-term Debt, and Off-Balance Sheet Instruments), and a draw against its revolving credit facility for the remaining balance. Expenses for the acquisition, in the amount of \$266,837, consisted of legal and professional fees, travel costs, stock compensation costs and various other expenses related to the acquisition transaction. These expenses have been capitalized and allocated to goodwill. The Company engaged an independent party to provide assistance with customary valuations, analysis and allocation of the purchase price, which resulted in an allocation to goodwill. For the purposes of recording assets by segment, the acquired assets, including goodwill, are reported under the Software applications segment. The Company expects all goodwill will be deductible for tax purposes, and has an indefinite life for book purposes. The deferred tax liability arises from a difference in the agreed to price for the building asset (tax basis) and the purchase price allocation (book basis included in property and equipment and based on appraisal). Research and development assets acquired in the purchase were not material.

The allocation of the purchase price, including capitalized acquisition expense is as follows (liabilities assumed as parts of the purchase price were not deemed material):

Property and equipment	\$ 615,000
Computer software	610,000
Goodwill	1,480,587
Other intangible assets	1,645,000
Deferred tax liability	(33,750)
 Total assets purchase price	 \$ 4,316,837

The detail of computer software, other intangible assets and goodwill and their useful lives are as follows:

Asset	Value	Effective Useful Life
Computer software	\$ 610,000	4 years
Trade name	70,000	3 years
Covenants not-to-compete	75,000	5 years
Customer contracts and related relationships	1,500,000	20 years
 Other intangible assets	 \$ 1,645,000	
 Total computer software and other intangible assets	 \$ 2,255,000	 13.3 years *
 Goodwill	 \$ 1,480,587	 indefinite

* weighted average

The Company funded the acquisition in part with advances of approximately \$2.1 million under its credit facilities with its bank. The Company also utilized approximately \$1.3 million in cash from McAleer as, pursuant to the asset purchase agreement, service contract revenue with respect to 2007 services which was received by McAleer in 2006 prior to the closing was segregated for the Company's account. Initially the owner assumed a \$525,000 note secured by the real estate for the remainder of the purchase price, which was subsequently refinanced, and the Company incurred expenses which were capitalized as a part of the transaction.

Sources of funds used in the transaction (net of subsequent refinancing activities) are as follows:

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Proceeds from increase in long-term note payable secured by property and equipment (at time of purchase)	\$ 486,046
Proceeds from long-term note payable secured by real estate (for refinance of McAleer note)	486,000
Receipts on billings for McAleer 2007 support agreements earmarked for CSI	1,280,000
Draw on revolving credit facility (escrow payment at time of signing of definitive agreement)	100,000
Draw on revolving credit facility (at time of purchase (including \$12,378 for acquisition related expenses))	1,671,332
Draw on revolving credit facility (for refinance of McAleer note)	39,000
Payments of acquisition related expenses (funded from revolving credit facility)	254,459
 Subtotal of funds from revolving loan	 2,064,791

Total purchase price \$ 4,316,837

Under SFAS No. 141, Business Combinations, acquisition expenses incurred as of the initiation date by the acquiring company that are direct costs of the acquisition, as determined by the principles of accounting for the acquisition of an asset, should be allocated to identified assets acquired and liabilities assumed, with unallocated amounts being recorded as goodwill. The guidance further defines the initiation date as the earlier of (1) the date that the major terms of a plan, including the ratio of exchange of stock, are announced publicly or otherwise formally made known to the stockholders of any one of the combining companies or (2) the date that stockholders of a combining company are notified in writing of an exchange offer. In addition, direct costs are further defined as

Table of Contents

out-of-pocket or incremental costs directly related to a business combination such as a finder's fee and fees paid to outside consultants for accounting, legal, or engineering investigations or for appraisals. Guidance further dictates that internal costs associated with a business combination (whether one-time costs or recurring in nature) should be expensed as incurred. Under this guidance, the initiation date of this acquisition was September 20, 2006, the date the Company filed the Form 8-K with the SEC setting forth our intent to acquire McAleer and formally communicating to our shareholders the major terms of the potential acquisition agreement.

In consideration of the requirements of SFAS No. 141, the Company identified expenses incurred that were directly related to the acquisition of McAleer, and capitalized those expenses as appropriate. Upon completion of the acquisition, the purchase price and other direct costs were allocated to identifiable assets or liabilities, with all unallocated amounts classified as goodwill, subject to SFAS No. 142, Goodwill and Other Intangible Assets. As of December 31, 2007, the Company has incurred approximately \$300,000 in acquisition related costs, of which approximately \$267,000 were direct costs of the acquisition of McAleer and were therefore capitalized.

Pro Forma Financial Information

The following unaudited pro forma statement of operations data for the year ended December 31, 2006 gives effect to our acquisition of McAleer as if the acquisition had occurred on January 1, 2006. Our historical financial information has been derived from our audited financial statements included in this report. Historical financial information for McAleer has been derived from the audited financial statements of McAleer as of December 31, 2006.

We have not disclosed pro forma results for 2007 as actual results reported in our consolidated statements of operations are the same as those that would be reported on a pro forma basis. Since the acquisition was agreed to close effective January 1, 2007, and was only closed on January 2, 2007 to accommodate the bank's holiday, the financial statements for the year ended December 31, 2007 as disclosed in the consolidated statements of operations are indicative of the pro forma results for that period and no further disclosure is necessary.

Pro forma Income Statement Data for the Year

Ended December 31, 2006

	For the Year ended December 31, 2006			Pro forma Combined
	CSI	McAleer	Adjustments	
Revenues	\$ 28,553,530	\$ 4,003,020	\$	\$ 32,556,550
Net income (loss)	(879,614)	199,939	(216,528) ⁽¹⁾⁽²⁾	(896,203)
Earnings (loss) per share	(0.27)			(0.28)
Weighted average shares outstanding	3,236,327			3,236,327

(1) Net income is net of pro forma adjustment for C-corporation taxes.

(2) Net income is adjusted for the pro forma additional depreciation of property and equipment and the amortization of intangibles over the useful lives noted above following the write-up of the assets to their fair values (in accordance with the purchase price allocation detailed above) and the pro forma additional interest expense related to financing used to fund the acquisition.

NOTE 3 ACCOUNTS RECEIVABLE

	December 31,	
	2007	2006
Billed receivables	\$ 5,741,998	\$ 3,658,037
Unbilled receivables	2,851,318	73,211
Commission receivable and other	193,736	133,780
Allowance for sales returns	(17,564)	(6,838)
Allowance for doubtful accounts	(72,452)	(30,000)

\$ 8,697,036 \$ 3,828,190

NOTE 4 CONCENTRATION OF CREDIT RISK

For the years ended December 31, 2007 and 2006 our top ten clients constituted approximately 46% and 42%, respectively, of our annual revenue. At December 31, 2007, approximately 8% of the Company's net accounts receivable were due from the top ten customers. At December 31, 2006, approximately 50% of the Company's receivables were due from the top ten customers. Potential losses from concentrations of credit risk with respect to trade accounts receivable are considered to be limited due to the number of the customers comprising the customer base, including significant amounts to be paid through government funding, and the Company's ongoing credit evaluations of its customers.

Table of Contents

For the years ended December 31, 2007 and 2006, approximately 57% and 54%, respectively, of the Company's purchases were from three vendors. At December 31, 2007 and 2006, approximately 50% and 15%, respectively, of the Company's accounts payable were due to these three vendors.

NOTE 5 PROPERTY AND EQUIPMENT

	December 31,	
	2007	2006
Land	\$ 117,000	\$
Buildings	423,000	
Furniture	255,238	311,827
Computer equipment	233,929	262,239
Office equipment	929,602	949,831
Leasehold improvements	178,654	186,503
Total	2,137,423	1,710,400
Accumulated depreciation	(820,710)	(938,928)
Property and equipment, net	\$ 1,316,713	\$ 771,472

Depreciation expense charged to operations was \$407,924 and \$337,502 for the years ended December 31, 2007 and 2006, respectively.

NOTE 6 COMPUTER SOFTWARE COSTS

	December 31,	
	2007	2006
Capitalized computer software costs	\$ 5,816,109	\$ 4,148,039
Purchase of computer software for resale	214,882	116,882
Accumulated amortization	(3,868,274)	(2,759,463)
Computer software costs, net	\$ 2,162,717	\$ 1,505,458

Amortization expense charged to cost of sales for the software applications segment was \$1,108,811 and \$709,175 for the years ended December 31, 2007 and 2006, respectively.

NOTE 7 LONG-TERM AND SHORT-TERM DEBT AND OFF-BALANCE SHEET INSTRUMENTS

In 2005, in order to support the activities of the reverse acquisition, the Company entered into a line of credit facility with a bank whereby the Company could borrow up to 80% of accounts receivable balances, not to exceed the total facility limit of \$3.0 million. In the first quarter of 2006 and in January 2007, the facility was renewed and the limit increased to \$3.5 million and \$5.5 million, respectively. The primary purpose of these modifications was to increase the amount of the credit facilities to provide for expanding working capital and other credit needs, including funding the acquisition of substantially all of the assets and business operations of McAleer in early 2007. In May 2007, the Company extended the maturity date of the facility until September 15, 2007.

On September 14, 2007, the Company entered into agreements with the bank renewing the line of credit facility. The terms of the agreements previously entered into were amended as follows:

the principal amount of the facility was increased from \$5.5 million to \$7.0 million;

the maturity date was extended from September 15, 2007 until June 30, 2009;

permissible purposes of the funds borrowed under the revolving facility were expanded to include funding short-term working capital and general corporate purposes of the Company; and

the definition of the borrowing base was expanded to include 50% of eligible inventory (with a maximum borrowing ability against eligible inventory of \$1,000,000), in addition to 80% of eligible accounts.

Other than the amendments noted above, the material obligations and provisions of the facility remain unchanged. The modifications also memorialized certain previously granted waivers to the restrictive covenants and requirements contained in the agreements with the bank. The bank granted waivers permitting us to enter into the acquisition of McAleer, including the use of bank credit facility advances to fund such acquisition, and incurring mortgage indebtedness to McAleer as a part of the purchase of McAleer's real estate. The bank also waived any cross-default relating to the subordinated notes payable to certain stockholders, which the Company did not repay at their May 2006 maturity.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

It was not the intent of either CSI or Barron that the Registration Rights Agreement result in the majority of the proceeds from the preferred stock and warrant issuance being recorded as a liability rather than equity. In response, on November 7, 2005, CSI and Barron entered into an amendment to the Registration Rights Agreement that eliminated cash liquidated damages and replaced them with liquidated damages in the form of additional shares of Series A Convertible Preferred Stock. Pursuant to the amendment, 2,472 shares of preferred stock would have been issued to Barron for each day when liquidated damages were triggered until February 11, 2007, when this damages provision expired. Because the amendment to the Registration Rights Agreement changed the liquidated damages penalty from settlement in cash to settlement in a set number of shares which is unaffected by changes in the share market

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

On June 20, 2007, the Company and Chuck Yeager Real Estate amended the operating lease agreement, originally entered into on November 30, 2005, to include an additional 12,544 square feet of warehouse space. The lease of the additional warehouse space was the result of carrying additional inventory and increased monthly rent by approximately \$2,400. While the lease on the additional space was scheduled to expire on August 31, 2007, the Company extended the lease until December 31, 2007, and has since been renting the additional space on a month to month basis, but may choose to extend the term of the lease once again.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

election to the Board and the remaining shares vested at the conclusion of the 2007 Annual Meeting of Stockholders of the Company upon Mr. Bryson's reelection to the Board.

On July 10, 2006, the Company entered into an Investor Relations Consulting Agreement (the "Agreement") with Alliance Advisors, LLC ("Alliance"). The purpose of the Agreement is for Alliance to assist the Company in the development of the Company's investor relations and corporate communications program. Under the terms of the Agreement, Alliance assisted the Company for a term of twelve months in developing and implementing an investor relations and corporate communications strategy. In exchange for Alliance's services, the Company paid Alliance \$6,500 per month for the first six months of the Agreement. At the end of six months,

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

According to SFAS No. 109, Accounting for Income Taxes, such tax credits are to be recorded as assets and reductions of tax expense to the extent it is more likely than not that the taxable income in future periods will be sufficient to utilize the credits and employment levels will not decrease, causing a loss of credits recorded in prior years. SFAS No. 109 also requires that, on an ongoing basis, management assess any changes in conditions which may affect the likelihood of realizing these tax credits and that a valuation allowance be established should a degree of uncertainty about the likelihood of realizing these credits become apparent. A valuation allowance would be established with a charge against income. Based on management's review of the Company's historical and current performance and its plans for future growth including acquisitions, the introduction of new products, the expansion of existing products and expansion into new markets, management believes it is more likely than not that the Company will be able to fully utilize these tax credits and no valuation allowance is considered necessary at this time.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

In December 2007, the FASB issued SFAS No. 141(R), Business Combinations and SFAS No. 160, Non-controlling Interests in Consolidated Financial Statements. The standards are intended to improve, simplify, and converge internationally the accounting for business combinations and the reporting of non-controlling interests in consolidated financial statements. SFAS No. 141(R) requires the acquiring entity in a business combination to recognize all (and only) the assets acquired and liabilities assumed in the transaction; establishes the acquisition-date fair value as the measurement objective for all assets acquired and liabilities assumed; and requires the acquirer to disclose to investors and other users all of the information they need to evaluate and understand the nature and financial effect of the business combination. SFAS No. 141(R) is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008. SFAS No. 141(R) applies prospectively to business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2008. Earlier adoption is prohibited.

Audit Committee Financial Expert

The Board of Directors has determined that Mr. Bryson, based on his qualifications, is an audit committee financial expert as that term is defined in Item 407(d)(5) of Regulation S-K.

Nomination Policy for Directors

On March 20, 2006, the Board of Directors adopted a Policy for Nomination of Directors. The policy sets forth the criteria the Board of Directors will consider in evaluating potential nominees for consideration for the Board. Section 2.9 of the Company's Bylaws sets forth procedures for stockholder nominations of directors. In evaluating potential nominees, the Board shall consider, among other things, (i) the need for independent members; (ii) the potential nominee's ability to effectively represent stockholders' interests; (iii) the potential nominee's ability to dedicate sufficient time, energy and attention to the performance of required duties of directors; (iv) the potential nominee's integrity, commitment, and independence of thought and judgment; and (v) any other relevant factors the Board deems appropriate to consider.

Stockholders wishing to nominate a person for election to the Board of Directors must submit a notice that includes certain information about the nominee, including the nominee's business experience and other information that would be required to be included in a proxy statement solicited for the election of such director. A notice submitted for the nomination of a director must be received at the Company's executive offices not less than 45 days nor more than 60 days prior to the anniversary date of the mailing of proxy materials for the immediately preceding annual meeting of stockholders; or, if that date is not within 30 days before or after such anniversary date, the notice must be received not later than 10 days after the notice of the date of the annual meeting was mailed or public disclosure of the annual meeting date was made, whichever first occurs.

Section 16(a) Beneficial Ownership Reporting Compliance

Based on a review of Forms 3, 4, and 5 and representations made to us, it appears that all executive officers and directors have made timely filings of Statements of Beneficial Ownership on Form 3, Form 4 and Form 5 during 2007.

Code of Ethics

On March 20, 2006, the Board of Directors adopted a code of ethics that applies to all directors, officers and employees of the Company. Our code of ethics is posted on our website, www.csioutfitters.com.

Item 11. Executive Compensation.
Director Compensation

The table below presents all compensation for our non-employee directors for the year ended December 31, 2007. Compensation of our two directors who are also executive officers, Nancy K. Hedrick, President and CEO, and Thomas P. Clinton, Senior Vice President of Strategic Relationships, is discussed below under Executive Compensation. Our employee directors do not receive any compensation for serving on the board of directors.

Director Compensation

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

The assumptions underlying the valuations of the stock awards and a discussion of those assumptions are contained in Note 10, Stock-Based Compensation, to our audited consolidated financial statements dated December 31, 2007.

⁽²⁾ At December 31, 2007, Messrs. Sobel, Phillips and Bryson held the following stock awards consisting of shares granted under our 2005 Incentive Compensation Plan: 98,496, 49,248, 23,350 and 16,416, respectively.

Non-employee directors do not receive any cash compensation for serving on the board, but are reimbursed for incidental expenses related to attendance at board and committee meetings. In lieu of cash compensation, we have granted stock awards to our outside directors under our 2005 Incentive Compensation Plan. On February 21, 2006, the compensation committee of the board of directors and the full board of directors approved a grant of 98,496 shares to Mr. Sobel, chairman of the board, and grants of 49,248 shares each to Shaya Phillips and Thomas V. Butta. Pursuant to all of the awards, one-third of the shares vested immediately upon approval, an additional one-third vested on February 28, 2006, and the final one-third vested on February 28, 2007. Except in the event of change of control of the Company, the directors were prohibited from selling any shares awarded them prior to March 1, 2007. If a director s

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

The term of the agreements is three years, expiring on February 10, 2008. The agreements renew automatically upon the expiration of the initial or any renewal periods in the absence of either party giving thirty days advance notice of termination. The agreements also contain the following provisions:

a prohibition on the Company modifying the executive's job responsibilities and duties in a matter inconsistent with the executive's job position without the executive's consent;

a prohibition on the Company relocating the executive's principal location of employment more than thirty miles away from our initial headquarters location in Easley, South Carolina without the executive's consent;

the Company's right to terminate the executive for cause;

Table of Contents

non-compete provisions prohibiting the executive from competing with us, soliciting our customers or suppliers, or employing any of our employees during the term of his or her employment and for the period of (i) one year after expiration of the employment agreement or termination of employment for cause, or (ii) the remainder of the initial three year term plus one year upon a voluntary termination of employment;

obligations of confidentiality with respect to non-public information concerning our business; and

certain benefits to be paid by us to the executive upon his or her termination of employment, as discussed under **Executives Benefits Upon Termination of Employment**.

Defined Contribution Plan

In 2007, the Company established a 401(k) defined contribution plan for the benefit of its employees, and terminated the Simple IRA savings plan maintained in previous years. Employees of the Company may participate in the 401(k) plan, whereby the employees may elect to make contributions pursuant to a salary reduction agreement. The Company's contributions to the plan, as determined by management, are discretionary and are allocated among the participants based on the participants' contributions. Contributions to the 401(k) plan were \$223,673 for the year ended December 31, 2007. For the year ended December 31, 2006, the Company contributed \$114,651 to the Simple IRA Plan.

Executives Benefits Upon Termination of Employment

Upon termination of an executive for cause, the Company will pay the executive salary and unpaid reimbursable expenses outstanding as of the date of termination, plus any benefits to which he or she may be entitled under applicable plans or programs. The employment agreements between each of our named executive officers and the Company provide severance benefits to each executive in the event of termination without cause. Specifically, in the event of such termination, we will pay the executive eighteen months of his or her base salary, plus any benefits to which he or she may be entitled under applicable plans or programs. Also, the executive would be paid, over a one year period following termination of employment, amounts aggregating 75% of the average of the executive's base salary and bonuses during the period of his or her employment.

2005 Equity Incentive Compensation Plan

On April 29, 2005, our board of directors adopted the 2005 Computer Software Innovations, Inc. Incentive Compensation Plan. The Incentive Plan authorizes the compensation committee of the board of directors to grant one or more of the following awards to directors, officers, key employees, consultants and advisors to the Company and its subsidiaries who are designated by the committee:

non-qualified stock options;

stock appreciation rights (SARs); and

stock awards.

We are authorized to issue under the Incentive Plan up to 1,100,000 shares of common stock pursuant to exercise of options and SARs and grants of stock awards. At February 20, 2008, 397,756 of such shares remained available for issuance. Awards that are substituted in connection with a corporate transaction or that are made to an individual outside of the Incentive Plan do not count against the limit.

Generally, if an award is terminated, the shares allocated to that award under the Incentive Plan may be reallocated to new awards under the Incentive Plan. Shares surrendered pursuant to the exercise of a stock option or other award or in satisfaction of tax withholding requirements under the Incentive Plan may also be reallocated to other awards.

The Incentive Plan provides that if there is a stock split, stock dividend or other event that affects our capitalization, appropriate adjustments will be made in the number of shares that may be issued under the Incentive Plan and in the number of shares and price of all outstanding grants and

awards made before such event.

Grants and Awards Under the Incentive Plan

The principal features of awards under the Incentive Plan are summarized below.

Stock Options

The Incentive Plan permits the grant of non-qualified stock options. The exercise price for options will not be less than the fair market value of a share of common stock on the date of grant. Other than in connection with a corporate recapitalization, the option price may not be reduced after the date of grant. The period in which an option may be exercised is determined by the committee on the date of grant, but may not exceed ten years. Payment of the option exercise price may be in cash, in a cash equivalent acceptable to the administrator, using a cashless exercise with a broker, with shares of common stock or with a combination of cash and shares of common stock. The Incentive Plan provides that a participant may not be granted options in a calendar year for more than 100,000 shares of common stock.

Table of Contents

Stock Appreciation Rights

SARs may be granted either independently or in combination with underlying stock options. Each SAR will entitle the holder upon exercise to receive the excess of the fair market value of a share of common stock at the time of exercise over the SAR's initial value, which cannot be less than the fair market value of a share of common stock on the date of grant of the SAR. Other than in connection with a corporate recapitalization, the initial value of any SAR may not be reduced after the date of grant. At the discretion of the committee, all or part of the payment in respect of a SAR may be in cash, shares of common stock or a combination thereof. The maximum period in which a SAR may be exercised is ten years from the date of its grant. No participant may be granted SARs in a calendar year covering more than 100,000 shares of common stock. For purposes of this limitation and the individual limitation on the grant of options, a SAR and a related option are treated as a single award.

Stock Awards

The Company may also grant stock awards that entitle the participant to receive shares of common stock. A participant's rights in the stock award will be forfeitable or otherwise restricted for a period of time or subject to conditions set forth in the grant agreement as determined by the administrator. The administrator may, in its discretion, waive the requirements for vesting or transferability for all or part of the stock awards in connection with a participant's termination of employment or service. The Incentive Plan provides that no participant may be granted stock awards in any calendar year for more than 400,000 shares of common stock.

Change of Control Provisions

The Incentive Plan provides that in the event of a Change of Control (as defined in the Incentive Plan), unless the award is assumed, replaced or converted to the equivalent award by the continuing entity, all outstanding awards will become fully exercisable and the applicable restrictions on such awards will lapse. Replacement awards will be earned, vested or exercisable if the participant is terminated within 24 months of a change in control. Under the Incentive Plan, the term Change of Control generally includes a merger, consolidation or reorganization of the Company in which the Company's shareholders prior to such event do not constitute a majority of the shareholders of the surviving entity following such event; the sale by the Company of substantially all of its assets; the approval by the stockholders of the Company of a complete liquidation or dissolution; or a determination by the board of directors that a Change of Control has occurred. The conversion of the Company's Series A Convertible Preferred Stock or the exercise of the common stock warrants issued in connection with such Preferred Stock would not constitute a Change of Control under the Incentive Plan.

**Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.
Security Ownership of Management and Certain Beneficial Owners**

Security Ownership of Management

The following table sets forth, as of February 20, 2008, certain information with respect to beneficial ownership of shares of our common stock by each of the members of the board of directors, by each of the executive officers identified in the Summary Compensation Table below and by all directors and executive officers as a group.

The business address of each named person or group is 900 East Main Street, Suite T, Easley, South Carolina 29640.

Name of Beneficial Owner	Common Stock Beneficially Owned⁽¹⁾ (2)	Percent of Class⁽³⁾

- (1) Under the rules of the Securities and Exchange Commission, a person is deemed to be the beneficial owner of a security if that person, directly or indirectly, has or shares the powers to direct the voting of the security or the power to dispose or direct the disposition of the security. Accordingly, more than one person may be deemed to be a beneficial owner of the same securities. A person is also deemed to be a beneficial owner of any securities with respect to which that person has the right to acquire beneficial ownership within 60 days of the relevant date.
- (2) To our knowledge, none of the shares beneficially owned have been pledged as security.
- (3) Based on 4,698,970 shares outstanding as of February 20, 2008.

Table of Contents

Security Ownership of Certain Beneficial Owners

The following table sets forth, as of February 20, 2008, certain information with respect to beneficial ownership of shares of our common stock by each person who owns, to our knowledge, more than 5% of the outstanding shares of our common stock.

Name and Address of Beneficial Owner	Common Stock Beneficially Owned ⁽¹⁾	Percent of Class ⁽²⁾
Joe G. Black 900 East Main Street, Suite T Easley, South Carolina 29640	505,381	10.8
Robert F. Steel 325 East 8 th Street Hinsdale, Illinois 60521	172,367 ⁽³⁾	3.7
Kenneth A. Steel, Jr. 73 East Cedar Street Chicago, Illinois 60611	172,367 ⁽³⁾	3.7

⁽¹⁾ Under the rules of the Securities and Exchange Commission, a person is deemed to be the beneficial owner of a security if that person, directly or indirectly, has or shares the powers to direct the voting of the security or the power to dispose or direct the disposition of the security. Accordingly, more than one person may be deemed to be a beneficial owner of the same securities. A person is also deemed to be a beneficial owner of any securities with respect to which that person has the right to acquire beneficial ownership within 60 days of the relevant date.

⁽²⁾ Based on 4,698,970 shares outstanding as of February 20, 2008.

⁽³⁾ Based on a Schedule 13D filed with the Securities and Exchange Commission on March 8, 2006, filed jointly by Robert F. Steel and Kenneth A. Steel, Jr. Each disclaimed beneficial ownership, for the purposes of Regulation 13D under the Exchange Act, of any shares held beneficially or otherwise by the other.

Security Ownership of Barron

As of February 20, 2008, Barron beneficially held 6,859,736 shares of our Series A Convertible Preferred Stock which is convertible into common stock at any time on a one for one basis, subject to adjustments. The preferred stock is non-voting, except for certain events adversely affecting the rights of holders of such preferred stock and as otherwise provided under Delaware law with respect to class voting. In addition, Barron holds warrants to purchase 6,163,936 shares of our common stock, and 228,000 shares of outstanding common stock. Both the preferred stock and the warrants contain prohibitions that restrict Barron from beneficially owning more than 4.9% of our common stock at any time. Therefore, based on 4,698,970 shares of common stock outstanding as of February 20, 2008, Barron on such date was the beneficial owner of approximately 228,000 shares of common stock.

The general partner of Barron is Barron Capital Advisors, LLC. Barron's address is 730 Fifth Avenue, 25th Floor, New York, New York 20019. The managing member of Barron Capital Advisors, LLC is Andrew Barron Worden.

Potential for Change of Control

As of February 20, 2008, our outstanding shares of common stock totaled 4,698,970, of which 2,192,618 were owned by management and our directors. Accordingly, as of such date, our management held 46.7% of outstanding shares and accordingly possessed the ability to exercise a significant amount of control over the Company. However, Barron may sell 13,251,672 shares of common stock. Barron is prohibited from beneficially owning greater than 4.9% of our shares (except under limited circumstances involving significant acquisition transactions).

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

However, one or more investors could acquire enough shares in or subsequent to this offering so as to effect a change of control of the Company. We are currently unaware of any plan or arrangement to effect a change of control of us.

Table of Contents**Equity Compensation Plans**

The following table sets forth certain equity compensation plan information for the Company as of December 31, 2007.

EQUITY COMPENSATION PLAN INFORMATION

	Number of Securities to be issued upon exercise of outstanding options, warrants and rights (a)	Weighted-average price of outstanding options, warrants and rights (b)	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a)) (c)
Equity compensation plans approved by security holders	375,203 ⁽¹⁾	\$ 0.12	397,756 ⁽²⁾
Equity compensation plans not approved by security holder	N/A	N/A	N/A

- (1) Includes 205,203 shares underlying options held by non-executive officers of the Company pursuant to the former incentive plan of CSI South Carolina, which options were assumed by the Company in its February 2005 merger with CSI South Carolina. No more options may be granted under the former CSI South Carolina plan. Also includes 170,000 shares underlying options granted to employees under our 2005 Incentive Compensation Plan.
- (2) Reflects shares available for award under our 2005 Incentive Compensation Plan.

**Item 13. Certain Relationships and Related Transactions, and Director Independence.
Director Independence**

The Company utilizes the rules of the NASDAQ Stock Market (the "NASDAQ Rules") for determining the independence of its directors. The NASDAQ Rules define specific relationships that would disqualify a director from independence. Based on the rules, we have conducted an evaluation of director independence, based primarily on a review of the responses of the directors to questions regarding employment and compensation history, affiliations and family and other relationships, including those relationships described in this item below. As a result of this evaluation, we have affirmatively determined that each of our directors who served during 2007 who is not an executive officer of the Company was and is independent for the purposes of NASDAQ Marketplace Rule 4200. These independent directors include Anthony H. Sobel, Shaya Phillips and Jeffrey A. Bryson.

Our board of directors has no nominating committee. Rather, the full Board acts as a nominating committee. We have two employee directors serving on our Board who, as executive officers, are not considered independent under the NASDAQ Rules. These employee directors are Nancy K. Hedrick, our president and CEO, and Thomas P. Clinton, our senior vice president of strategic relationships.

In determining the independence of our directors pursuant to the NASDAQ Rules, we considered the following relationships:

During the negotiations of the final merger agreement, management asked Barron for assistance in identifying possible independent directors. Barron introduced to management Anthony H. Sobel, Shaya Phillips and Thomas V. Butta. The Company conducted research and interviewed candidates, and ultimately elected Messrs. Sobel, Phillips and Butta to the board on January 31, 2005 with CSI South Carolina acting by written consent as majority shareholder. At the time, we determined that these directors were independent pursuant to the standards of the NASDAQ Rules.

Edgar Filing: COMPUTER SOFTWARE INNOVATIONS INC - Form ARS

Mr. Sobel is a co-investor in Montana Metal Products with Robert F. Steel. We entered into a consulting arrangement with Mr. Steel and his brother, Kenneth A. Steel, Jr., for Messrs. Steel to advise the Company on the development and implementation of strategic business plans, to assist management in developing marketing and growth strategies and to assist management in seeking out and analyzing potential acquisition opportunities. On February 27, 2006, we entered into a Letter of Engagement and individual stock agreements with Robert F. Steel and Kenneth A. Steel, Jr. The terms of the Letter of Engagement and the stock agreements provided that Messrs. Steel would provide consulting services to us through February 10, 2008. In exchange, we issued 172,367 shares of common stock to each of Kenneth A. Steel, Jr. and Robert F. Steel pursuant to the Company's 2005 incentive compensation plan. Messrs. Steel are both investors in Barron.

Mr. Phillips has consulted on a limited basis for Barron with respect to technology investments.

Table of Contents**Subordinated Notes Owed to Related Persons**

At December 31, 2007 and February 20, 2008, the balance on each of the five subordinated notes owed to each of Ms. Hedrick, Ms. Hawkins and Messrs. Black, Buchanan and Clinton, was \$225,040. As discussed in Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations G. Liquidity and Capital Resources Future Capital Needs and Resources, we declined to repay the subordinated notes at maturity in May 2006. The five former shareholders of CSI South Carolina who are holders of the notes have cooperated with us and have not demanded repayment. Pursuant to the notes, default interest has been paid at the rate of 15% per annum rather than the pre-default rate of prime plus 2% per annum. Accordingly, each of the five former CSI shareholders in 2007 received interest payments totaling approximately \$48,483 each. As indicated above, all of the five shareholders of CSI South Carolina hold in excess of 5% of our common stock, and all but Mr. Black are executive officers of the Company.

Item 14. Principal Accounting Fees and Services.

The following table sets forth professional fees billed by Elliott Davis, LLC to the Company for professional services rendered for the fiscal years ended December 31, 2007 and 2006. Audit fees consisted primarily of fees for the audit of the Company's annual consolidated financial statements and for reviews of the condensed financial statements included in the Company's quarterly reports on Form 10-QSB. Audit related fees related primarily to services rendered in connection with the Company's registration statement on Form SB-2 declared effective by the Securities Exchange Commission on February 14, 2006, and subsequent amendments. Tax fees include fees for services for assistance with preparation of federal and state tax returns. All other fees related to services rendered in 2007 and 2006 in connection with the audits of the financial statements of McAleer Computer Associates, Inc. for 2006, 2005 and 2004.

Description	2007	2006
Audit fees	\$ 75,000	\$ 67,700
Audit related fees	31,500	25,500
Tax fees	16,950	12,800
All other fees	35,100	84,900
TOTAL FEES	\$ 158,550	\$ 190,900

Pre-approved Services

The Company's Audit Committee Charter stipulates that the audit committee will pre-approve all audit and non-audit services (subject to de minimis exceptions as defined by law for non-audit services) provided by the independent auditors in accordance with applicable regulations. The audit committee may delegate its authority to pre-approve non-audit services to one or more designated audit committee members. As permitted in its charter, the audit committee delegated its pre-approval authority with respect to non-audit services provided to the Company by Elliott Davis, LLC, to the audit committee chairman. The decisions of the designated member shall be presented to, and ratified by, the full audit committee at the next subsequent meeting. In 2007, all audit related services, tax services and other services were pre-approved by the audit committee.
