INFORMATION ON OIL AND GAS RESERVES (UNAUDITED)

The following information is presented in order to comply with the requirements of Resolution 541/08, *Disclosures about Oil and Gas Reserves* of the National Securities Commission (*Comisión Nacional de Valores*).

Oil and gas reserves

Proved oil and gas reserves are the estimated quantities of crude oil, natural gas, and natural gas liquids which geological and engineering available data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions, i.e., prices and costs as of the date the estimate is made. Prices include consideration of changes in existing prices provided by contractual arrangements, but not on increases based upon future conditions. Proved developed oil and gas reserves are reserves that can reasonably be expected to be recovered through existing wells with existing equipment and operating methods.

Estimates of reserves were prepared using standard geological and engineering methods generally accepted by the petroleum industry and in accordance with the rules and regulations of the SEC effective as of December 31, 2008. The choice of method or combination of methods employed in the analysis of each reservoir was determined by experience in the area, stage of development, quality and completeness of basic data, and production history. There are numerous uncertainties inherent in estimating quantities of proved reserves and in projecting future rates of production and timing of development expenditures, including many factors beyond the control of the producer. Reserve engineering is a subjective process of estimating underground accumulations of crude oil and natural gas that cannot be measured in an exact manner and the accuracy of any reserve estimate is a function of the quality of available data and of engineering and geological interpretation and judgment. In addition, results of drilling, testing and production subsequent to the date of an estimate may justify revision of such estimate. Accordingly, reserve estimates are often different from the quantities of crude oil and natural gas that are ultimately recovered. The meaningfulness of such estimates is highly dependent upon the accuracy of the assumption upon which they were based. The reserve estimates were subjected to economic tests to determine economic limits. The reserves in Argentina are stated prior to the payment of any royalties to the provinces in which the reserves are located. Consequently, royalties are given effect in such economic tests as operating costs in Argentina. The estimates may change as a result of numerous factors including, but not limited to, additional development activity, evolving production history, and continued reassessment of the viability of production under varying economic conditions.

The following tables reflect the estimated reserves of crude oil, condensate, natural gas liquids and natural gas as of December 31, 2008, 2007 and 2006 and the changes therein:

Table of Contents

	Crude Oil (1) (millions of barrels)	Gas (Bcf)	Combined (2) (boe in millions)
Proved Developed and Undeveloped Reserves			
Reserves as of December 31, 2006	680	4,015	1,396
Revisions of previous estimates (3)	46	319	100
Extensions, discoveries and improved recovery	17	9	19
Production for the year	(120)	(635)	(232)
Reserves as of December 31, 2007	623	3,708	1,283
Revisions of previous estimates (3)	31	(134)	8
Extensions, discoveries and improved recovery	41	132	65
Production for the year	(115)	(607)	(223)
Reserves as of December 31, 2008(4)	580	3,099	1,133
Proved Developed Reserves			
As of December 31, 2006	521	2,571	979
As of December 31, 2007	460	2,441	894
As of December 31, 2008	451	2,219	847

(1) Includes crude oil, condensate and natural gas liquids.

(2) Volumes of gas in the table above have been converted to boe at 5.615 mcf per barrel.

(3) Revisions in estimates of reserves are performed at least once a year. Revision of oil and gas proved reserves are considered prospectively in the calculation of depreciation.

(4) As of December 31, 2008, approximately 99.8% of our crude oil reserves and 99.9% of our gas reserves were placed in Argentina. The rest of our operations were placed in the United States of America.
