(concluded)

In September 2006, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 157, Fair Value Measurements (SFAS 157). This standard establishes a single authoritative definition of fair value, sets out a framework for measuring fair value, and requires additional disclosures about fair value measurements. SFAS 157 applies to fair value measurements already required or permitted by existing standards. SFAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. The changes to current GAAP from the application of this Statement relate to the definition of fair value, the methods used to measure fair value, and the expanded disclosures about fair value measurements.

One key component of the implementation of SFAS 157 includes the development of a three-tier fair value hierarchy. The basis of the tiers is dependant upon the various inputs used to determine the value of the Fund's investments. These inputs are summarized in the three broad levels listed below:

Level 1	quoted prices in active markets for identical assets
Level 2	other significant observable inputs (including quoted prices of similar securities, interest rates, prepayments speeds, credit risk, etc.)
Level 3	significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities.

The following is a summary of the inputs used to value the Fund's net assets as of March 31, 2009:

Valuation Inputs	Investments In Securities
Level 1 Quoted Prices	\$ 281,983,074
Level 2 Other Significant Observable Inputs	11,163,223
Level 3 Significant Unobservable	5,504,441
Total Investments	\$ 298,650,738

The following is a reconciliation of Level 3 assets (at either the beginning or the ending of the period) for which significant unobservable inputs were used to determine fair value.
