### **5. IMPACTS OF THE CONNECTED TRANSACTION ON THE COMPANY**

Shanghai SECCO is currently one of the largest petrochemical joint venture in China with nine main production plants, featuring the world-class integration of upstream and downstream production.

Shanghai SECCO is a major producer of acrylonitrile in China with a acrylonitrile production capacity of 260,000 tons/year. Acrylonitrile is mainly used for the production of acrylic, ABS resin, butyronitrile rubber, adiponitrile, acrylamide and pharmaceuticals, and also for the production of caprolactam and polymer polyols. There is a prospect for the broad applications of acrylonitrile in synthetic fiber, synthetic rubber, plastics and other fields. At present, China still imports certain acrylonitrile so as to meet its needs. The construction of a new acrylonitrile plant with a capacity of 260,000 tons/year will help Shanghai SECCO further enhance the competitiveness of its acrylonitrile products.

At present, Shanghai SECCO has a production capacity of 90,000 tons of butadiene each year. The construction of a new butadiene plant with a capacity of 90,000 tons/year will help Shanghai SECCO optimise its existing C4 resources, and thus improves economic efficiency.

The Company is of the view that through the implementation of the projects mentioned above, it can further enhance Shanghai SECCO's comprehensive competitiveness, which would benefit the Company to receive stable investment income.

### **6. IMPLICATIONS UNDER THE SHANGHAI LISTING RULES AND HONG KONG LISTING RULES**

The Transaction constitutes a related-party transaction of the Company under the Shanghai Listing Rules, and is also a connected transaction of the Company under the Hong Kong Listing Rules.

Since each of the applicable percentage ratios (other than the profit ratio) in respect of the consideration of the Transaction exceeds 0.1% but is less than 5%, the Transaction is subject to the reporting and announcement requirements but is exempt from the independent shareholders' approval requirement under Chapter 14A of the Hong Kong Listing Rules. The Company will disclose the details of the Transaction in the next published annual report and accounts of the Company in accordance with the relevant requirements as set out in Rule 14A.45 of the Listing Rules.

### **7. GENERAL INFORMATION**

The Company is a highly integrated petrochemical enterprise with a primary business of processing crude oil into a wide range of synthetic fibers, resins and plastics, intermediate petrochemicals and petroleum products.

- (2) Upon the completion of the Transaction, East China Sales Company will no longer lease the assets of the Chenshan Oil Depot Area from the company, which will be conducive to reduce the amount of the continuing connected transactions of the Company.

**7. REASONS FOR CONDUCTING THIS TRANSACTION AND ITS IMPACTS ON THE COMPANY**

Chenshan Oil Depot Area came into operation in the 1970s and was previously used to store and provide transshipment service of low sulphur crude oil for the Company and raw materials, including C3 and C4, for Golden Conti Company. Since very large crude carriers (VLCC) may not be able to dock at the jetty at the Chenshan Oil Depot Area, which is a shallow-draft jetty with low tonnage capacity, products were transported via multiple short trips after unloading the crude oil from vessels to small boats. With the completion of construction and the commencement of the operation of Sinopec Corp.'s large deepwater crude oil terminal at Daxie Island and its Ningbo-Shanghai-Nanjing Pipeline, the transport via the Ningbo-Shanghai-Nanjing Pipeline of the crude oil procured by the Company has been increasing in order to lower the transport costs and the shipping losses. Further, the completion of construction as well as the commencement of the operation of the Company's Refinery Revamping and Expansion Project in December 2012 has enhanced the crude oil processing capacity and depth of processing and enabled the Company to move a step forward to improving its crude oil processing business with respect to inferior and heavy crude oil, and there is basically no need to use the low sulphur crude oil any longer. Accordingly, the low sulphur crude oil storage function of Chenshan Oil Depot Area has been further impaired. In order to revitalise these assets, the Company has proposed to lease out the Chenshan Oil Depot Area other than the storage facilities at 10# jetty used by Golden Conti Company to East China Sales Company in January 2013. Further, since the refinery revamping and expansion project came into operation, the refined oil production capacity of the Company has expanded by over 90% compared to its original capacity with a possible increase of the refined oil production capacity of more than 4.6 million tons on an annual basis, there is a pressing need to resolve issues relating to the transshipment of refined oil and expansion into the Jiangsu and Zhejiang markets. As Sales Company is a distributor of the Company in respect of its sale of refined oil products, its lease of part of the assets of Chenshan Oil Depot Area to Sale Company enables the Company to play a primary role in realising the transshipment of refined oil products of the Company and in tapping into the Jiangsu and Zhejiang markets via the Zhejiang-Suzhou Pipeline.

As a result of the Transaction, the economic contribution arising from the large deepwater crude oil terminal at Daxie Island and the Ningbo-Shanghai-Nanjing Pipeline to the Company in lowering its crude oil transport costs and shipping losses may be materialised to the fullest extent possible, which are instrumental for supporting the efforts of the Company in the transshipment of the refined oil and the expansion into the Jiangsu and Zhejiang markets. Meanwhile, the Transaction would help the Company to further revitalise these assets to realise capital gains and to generate reasonable income gained from sale of assets so as to increase the Company's working capital.
