The Markets in Review

Dear Shareholder,

Risk assets, such as stocks and high yield bonds, enjoyed strong performance in the 12 months ended February 28, 2017. It was a different story for higher-quality assets such as U.S. Treasuries, which generated muted returns after struggling in the latter part of 2016 as reflationary expectations in the United States helped drive a pick-up in global growth and investors braced for higher interest rates.

Markets showed great resilience during the period. Big surprises such as the United Kingdom's vote to leave the European Union and the outcome of the U.S. presidential election brought spikes in equity market volatility, but they were ultimately short-lived. Instead, investors used the sell-offs to seize upon buying opportunities, allowing markets to quickly rebound. We believe this reinforces the case for taking the long view rather than reacting to short-term market noise.

The global reflationary theme—rising nominal growth, wages and inflation—was the dominant driver of asset returns during the period, outweighing significant political upheavals and uncertainty. This trend accelerated after the U.S. election and continued into the beginning of 2017, stoked by expectations for an extra boost to U.S. growth via fiscal policy.

Although economic momentum is gaining traction, the capacity for rapid global growth is restrained by structural factors including an aging population, low productivity growth and excess savings. A tempered economic growth trend and high valuations across most assets have set the stage for muted investment returns going forward.

Equity markets still have room to move, although the disparity between winners and losers is widening, making selectivity increasingly important. Fixed income investors are also facing challenges as bond markets recalibrate to accommodate rising rates and higher inflation expectations. And in a world where political risk and policy uncertainty abound, there is no lack of potential catalysts for higher volatility.

In this environment, investors need to think globally, extend their scope across a broad array of asset classes and be nimble as market conditions change. We encourage you to talk with your financial advisor and visit blackrock.com for further insight about investing in today's markets.

Sincerely,

Rob Kapito

Fund Summary as of February 28, 2017

BlackRock Defined Opportunity Credit Trust

Fund Overview

BlackRock Defined Opportunity Credit Trust's (BHL) (the Fund) primary investment objective is to provide high current income, with a secondary objective of long-term capital appreciation. The Fund seeks to achieve its investment objectives by investing substantially all of its assets in loan and debt instruments and loan-related and debt-related instruments (collectively credit securities). The Fund invests, under normal market conditions, at least 80% of its managed assets in any combination of the following credit securities: (i) senior secured floating rate and fixed rate loans; (ii) second lien or other subordinated or unsecured floating rate and fixed rate loans or debt; (iii) credit securities that are rated below investment grade by a nationally recognized credit rating organization or unrated credit securities that are deemed to be of comparable quality by the investment adviser; and (iv) investment grade corporate bonds. The Fund may invest directly in such securities or synthetically through the use of derivatives.

BHL is scheduled to terminate no later than December 31, 2017.

No assurance can be given that the Fund's investment objectives will be achieved.

Performance and Portfolio Management Commentary

Returns for the six months ended February 28, 2017 were as follows:

	Returns Based On	
	Market Price	NAV
BHL ^{1,2}	6.26%	4.02%
Lipper Loan Participation Funds ³	13.07%	6.22%

¹ All returns reflect reinvestment of dividends and/or distributions.

² The Fund moved from a discount to NAV to a premium during the period, which accounts for the difference between performance based on price and performance based on NAV.

³ Average return.

Performance results may include adjustments made for financial reporting purposes in accordance with U.S. generally accepted accounting principles. The following discussion relates to the Fund's absolute performance based on NAV:

What factors influenced performance?

Floating rate loan interests (bank loans) benefited from the strong appetite for credit during the six-month period. From a sector perspective, the largest absolute contributors to performance included technology, healthcare, and consumer cyclical services. On a credit rating basis, B-rated, BB-rated and CCC-rated positions were the largest contributors over the semi-annual period. Finally, from an asset allocation standpoint, the Fund's tactical positions in high yield bonds and collateralized loan obligations benefited performance.

From a sector perspective, exposure to retailers was the sole absolute detractor from Fund performance for the six-month period. From a credit rating perspective, D-rated names posted slightly negative results while all other credit-rating segments posted positive returns.

Describe recent portfolio activity.

During the period, the Fund maintained its overall focus on the higher quality segments of the loan market in terms of loan structure, liquidity and overall credit quality. The Fund has concentrated its investments in strong companies with stable cash flows and high quality collateral, with the ability to meet interest obligations and ultimately return principal. From a sector standpoint, the Fund reduced exposure to consumer cyclical services overall and in particular to retailers, on the view that the outlook for the space continues to deteriorate on the back of weaker revenues. By contrast, the Fund increased its allocation to the health care and pharmaceutical sectors. With the bank loan universe trading over par, the Fund selectively added to its fixed rate high yield bond allocation in order to add price appreciation potential, as well as to garner higher quality energy exposure relative to that available within bank loans.

Describe portfolio positioning at period end.

The Fund held a majority of its portfolio in floating rate bank loans, with a modest position in relatively conservative high yield corporate bonds. The Fund maintained its highest concentration in higher coupon B-rated loans of select issuers while limiting exposure to low coupon BB-rated loans. Additionally, the Fund held a minimal position in loans rated CCC and below, while also avoiding the more volatile segments of that universe, such as oilfield services and retailers. Leading individual positions included Level 3 Communications, Inc. (wirelines), Altice NV (cable & satellite), and First Data Corp. (technology).

Fund Summary as of February 28, 2017

BlackRock Floating Rate Income Strategies Fund, Inc.

Fund Overview

BlackRock Floating Rate Income Strategies Fund, Inc. s (FRA) (the Fund) investment objective is to provide shareholders with high current income and such preservation of capital as is consistent with investment in a diversified, leveraged portfolio consisting primarily of floating rate debt securities and instruments. The Fund seeks to achieve its investment objective by investing, under normal market conditions, at least 80% of its managed assets in floating rate debt securities, including floating or variable rate debt securities that pay interest at rates that adjust whenever a specified interest rate changes and/or which reset on predetermined dates (such as the last day of a month or calendar quarter). The Fund invests a substantial portion of its investments in floating rate debt securities consisting of secured or unsecured senior floating rate loans that are rated below investment grade at the time of investment or, if unrated, are considered by the investment adviser to be of comparable quality. The Fund may invest directly in floating rate debt securities or synthetically through the use of derivatives.

No assurance can be given that the Fund s investment objective will be achieved.

Performance results may include adjustments made for financial reporting purposes in accordance with U.S. generally accepted accounting principles. The following discussion relates to the Fund s absolute performance based on NAV:

What factors influenced performance?

Floating rate loan interests (bank loans) benefited from the strong appetite for credit during the six-month period. On a sector basis, the largest contributors included holdings within technology, health care and chemicals. From a credit-rating perspective, B-rated, BB-rated and CCC-rated names were the largest contributors, as the lower credit-quality portions of the bank loan market drove the overall rally across the asset class. The Fund s tactical allocation to high yield bonds also contributed to performance, as the asset class benefited to a greater degree than bank loans from the rally in the energy and metals & mining sectors. Finally, an out-of-benchmark allocation to collateralized loan obligations added to returns.

Edgar Filing: BLACKROCK FLOATING RATE INCOME STRATEGIES FUND, INC. - Form N-CSRS

The sole negative contributor to the Fund's absolute performance over the six months came from exposure to retailers, as the space continued to display fundamental weakness. All other sectors within the bank loan market provided positive returns, as did all credit rating segments within the asset class.

Describe recent portfolio activity.

During the period, the Fund maintained its overall focus on the higher quality segments of the loan market in terms of loan structure, liquidity and overall credit quality. The Fund has concentrated its investments in strong companies with stable cash flows and high quality collateral, with the ability to meet interest obligations and ultimately return principal. From a sector standpoint, the Fund reduced exposure to consumer cyclical services overall and in particular to retailers, on the view that the outlook for the space continues to deteriorate on the back of weaker revenues. With the bank loan universe trading over par, the Fund selectively added to its fixed rate high yield bond allocation in order to add price appreciation potential, as well as to garner higher quality energy exposure relative to that available within bank loans.

Describe portfolio positioning at period end.

The Fund held a majority of its portfolio in floating rate bank loans, with a moderate position in relatively conservative high yield corporate bonds. The Fund maintained its highest concentration in higher coupon B-rated loans of select issuers, while limiting exposure to both higher quality loans with less compelling risk/reward profiles and lower-rated loans with more equity-like profiles and greater downside risk should credit sentiment weaken. At period-end, top issuer overweights included Ligado Networks LLC (wireless), Altice NV (cable & satellite), and Level 3 Communications, Inc. (wirelines).

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

Fund Summary as of February 28, 2017

BlackRock Limited Duration Income Trust

Fund Overview

BlackRock Limited Duration Income Trust's (BLW) (the Fund) investment objective is to provide current income and capital appreciation. The Fund seeks to achieve its investment objective by investing primarily in three distinct asset classes:

intermediate duration, investment grade corporate bonds, mortgage-related securities, asset-backed securities and U.S. Government and agency securities;

senior, secured floating rate loans made to corporate and other business entities; and

U.S. dollar-denominated securities of U.S. and non-U.S. issuers rated below investment grade at the time of investment or unrated and deemed by the investment adviser to be of comparable quality and, to a limited extent, non-U.S. dollar denominated securities of non-U.S. issuers rated below investment grade or unrated and deemed by the investment adviser to be of comparable quality.

The Fund's portfolio normally has an average portfolio duration of less than five years (including the effect of anticipated leverage), although it may be longer from time to time depending on market conditions. The Fund may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Fund's investment objective will be achieved.

Performance and Portfolio Management Commentary

Returns for the six months ended February 28, 2017 were as follows:

	Returns Based On	
	Market Price	NAV
BLW ^{1, 2}	6.64%	5.61%
Lipper High Yield Funds (Leveraged) ³	7.08%	7.59%

¹ All returns reflect reinvestment of dividends and/or distributions.

² The Fund's discount to NAV narrowed during the period, which accounts for the difference between performance based on price and performance based on NAV.

³ Average return.

Performance results may include adjustments made for financial reporting purposes in accordance with U.S. generally accepted accounting principles. The following discussion relates to the Fund's absolute performance based on NAV:

What factors influenced performance?

The largest contributors to the Fund's absolute performance over the period were its exposures to high yield corporate bonds, floating rate loans and asset-backed securities (ABS).

The largest detractors from the Fund's absolute performance over the period were its allocation to sovereign plus names, as well as its duration (sensitivity to interest rate movements) and yield curve positioning.

The Fund held derivatives during the period, including Treasury futures, currency forwards, options and credit default swaps. The derivatives were primarily used to adjust duration (sensitivity to interest rate movements) and yield curve exposure, and to manage credit risk. The Fund's derivative exposures had a positive impact on performance.

Describe recent portfolio activity.

Over the six-month period, the Fund kept its level of spread duration (sensitivity to changes in credit spreads) essentially unchanged, while rotating sector allocations to reflect the view that the economy is entering a reflationary period. The Fund's allocations to ABS and investment grade credit were reduced and rotated into emerging market debt, high yield corporates and commercial mortgage-backed securities (CMBS). In addition, agency collateralized mortgage obligations were added to the portfolio.

Describe portfolio positioning at period end.

At period end, the Fund maintained a diversified exposure to non-government spread sectors, including high yield corporates, senior loans, investment grade corporate credit, CMBS, and ABS, as well as agency and non-agency residential mortgage-backed securities. The Fund ended the period with a shorter duration stance and a yield curve flattening bias based on the view that the Fed would raise interest rates imminently.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

The Benefits and Risks of Leveraging

The Funds may utilize leverage to seek to enhance the distribution rate on, and net asset value (NAV) of, their common shares (Common Shares). However, these objectives cannot be achieved in all interest rate environments.

In general, the concept of leveraging is based on the premise that the financing cost of leverage, which is based on short-term interest rates, is normally lower than the income earned by a Fund on its longer-term portfolio investments purchased with the proceeds from leverage. To the extent that the total assets of the Funds (including the assets obtained from leverage) are invested in higher-yielding portfolio investments, the Funds' shareholders benefit from the incremental net income. The interest earned on securities purchased with the proceeds from leverage is paid to shareholders in the form of dividends, and the value of these portfolio holdings is reflected in the per share NAV.

To illustrate these concepts, assume a Fund's capitalization is \$100 million and it utilizes leverage for an additional \$30 million, creating a total value of \$130 million available for investment in longer-term income securities. If prevailing short-term interest rates are 3% and longer-term interest rates are 6%, the yield curve has a strongly positive slope. In this case, a Fund's financing costs on the \$30 million of proceeds obtained from leverage are based on the lower short-term interest rates. At the same time, the securities purchased by a Fund with the proceeds from leverage earn income based on longer-term interest rates. In this case, a Fund's financing cost of leverage is significantly lower than the income earned on a Fund's longer-term investments acquired from such leverage proceeds, and therefore the holders of Common Shares (Common Shareholders) are the beneficiaries of the incremental net income.

However, in order to benefit shareholders, the return on assets purchased with leverage proceeds must exceed the ongoing costs associated with the leverage. If interest and other costs of leverage exceed the Funds' return on assets purchased with leverage proceeds, income to shareholders is lower than if the Funds had not used leverage. Furthermore, the value of the [Fund s/Funds] portfolio investments generally varies inversely with the direction of long-term interest rates, although other factors can influence the value of portfolio investments. In contrast, the value of the Funds' obligations under their respective leverage arrangements generally does not fluctuate in relation to interest rates. As a result,

changes in interest rates can influence the Funds' NAVs positively or negatively. Changes in the future direction of interest rates are very difficult to predict accurately, and there is no assurance that the Funds' intended leveraging strategy will be successful.

The use of leverage also generally causes greater changes in each Fund's NAV, market price and dividend rates than comparable portfolios without leverage. In a declining market, leverage is likely to cause a greater decline in the NAV and market price of a Fund's shares than if the Fund were not leveraged. In addition, each Fund may be required to sell portfolio securities at inopportune times or at distressed values in order to comply with regulatory requirements applicable to the use of leverage or as required by the terms of leverage instruments, which may cause the Funds to incur losses. The use of leverage may limit a Fund's ability to invest in certain types of securities or use certain types of hedging strategies. Each Fund incurs expenses in connection with the use of leverage, all of which are borne by shareholders and may reduce income to the shareholders. Moreover, to the extent the calculation of the Funds' investment advisory fees includes assets purchased with the proceeds of leverage, the investment advisory fees payable to the Funds' investment adviser will be higher than if the Funds did not use leverage.

Each Fund may utilize leverage through a credit facility, or reverse repurchase agreements as described in the Notes to Financial Statements.

Under the Investment Company Act of 1940, as amended (the 1940 Act), the Funds are permitted to issue debt up to 3 $\frac{1}{3}$ % of their total managed assets. A Fund may voluntarily elect to limit its leverage to less than the maximum amount permitted under the 1940 Act. In addition, a Fund may also be subject to certain asset coverage, leverage or portfolio composition requirements imposed by its credit facility, which may be more stringent than those imposed by the 1940 Act.

If a Fund segregates or designates on its books and records cash or liquid assets having values not less than the value of a Fund's obligations under the reverse repurchase agreement (including accrued interest), then such transaction is not considered a senior security and is not subject to the foregoing limitations and requirements under the 1940 Act.

Derivative Financial Instruments

Edgar Filing: BLACKROCK FLOATING RATE INCOME STRATEGIES FUND, INC. - Form N-CSRS

The Funds may invest in various derivative financial instruments. These instruments are used to obtain exposure to a security, commodity, index, market, and/or other asset without owning or taking physical custody of securities, commodities and/or other referenced assets or to manage market, equity, credit, interest rate, foreign currency exchange rate, commodity and/or other risks. Derivative financial instruments may give rise to a form of economic leverage and involve risks, including the imperfect correlation between the value of a derivative financial instrument and the underlying asset, possible default of the counterparty to the

transaction or illiquidity of the instrument. The Funds' successful use of a derivative financial instrument depends on the investment adviser's ability to predict pertinent market movements accurately, which cannot be assured. The use of these instruments may result in losses greater than if they had not been used, may limit the amount of appreciation a Fund can realize on an investment and/or may result in lower distributions paid to shareholders. The Funds' investments in these instruments, if any, are discussed in detail in the Notes to Financial Statements.

¹ As of August 31, 2016, the Fund used observable inputs in determining the value of certain investments. As of February 28, 2017, the Fund used significant unobservable inputs in determining the value of the same investments. As a result, investments at beginning of period value were transferred from Level 2 to Level 3 in the disclosure hierarchy.

² As of August 31, 2016, the Fund used significant unobservable inputs in determining the value of certain investments. As of February 28, 2017, the Fund used observable inputs in determining the value of the same investments. As a result, investments at beginning of period value were transferred from Level 3 to Level 2 in the disclosure hierarchy.

³ Included in the related net change in unrealized appreciation (depreciation) in the Statements of Operations.

⁴ Any difference between net change in unrealized appreciation (depreciation) on investments still held at February 28, 2017 is generally due to investments no longer held or categorized as Level 3 at period end.

The Fund's investments that are categorized as Level 3 were valued utilizing third party pricing information without adjustment. Such valuations are based on unobservable inputs. A significant change in third party information could result in a significantly lower or higher value of such Level 3 investments.

¹ As of August 31, 2016 the Fund used observable inputs in determining the value of certain investments. As of February 28, 2017, the Fund used significant unobservable inputs in determining the value of the same investments. As a result, investments at beginning of period value were transferred from Level 2 to Level 3 in the disclosure hierarchy.

² As of August 31, 2016, the Fund used significant unobservable inputs in determining the value of certain investments. As of February 28, 2017, the Fund used observable inputs in determining the value of the same investments. As a result, investments at beginning of period value were transferred from Level 3 to Level 2 in the disclosure hierarchy.

³ Certain Level 3 investments were re-classified between Common Stocks and Rights.

⁴ Included in the related net change in unrealized appreciation (depreciation) in the Consolidated Statement of Operations.

⁵ Any difference between net change in unrealized appreciation (depreciation) on investments still held at February 28, 2017 is generally due to investments no longer held or categorized as Level 3 at period end.

The Fund's investments that are categorized as Level 3 were valued utilizing third party pricing information without adjustment. Such valuations are based on unobservable inputs. A significant change in third party information could result in a significantly lower or higher value of such Level 3 investments.
