February 19, 2019
UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, DC 20549

FORM 6-K

REPORT OF FOREIGN PRIVATE ISSUER
PURSUANT TO RULE 13a-16 OR 15d-16 OF
THE SECURITIES EXCHANGE ACT OF 1934

Report on Form 6-K dated February 19, 2019

Commission File Number 1-14846

AngloGold Ashanti Limited
(Name of registrant)

76 Rahima Moosa Street
Newtown, 2001
(P.O. Box 62117, Marshalltown, 2107)
South Africa
(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F.

Form 20-F Form 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):
Yes No

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7):
Yes No

Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.
Yes No

Report
for the six months and year ended 31 December 2018

FULL YEAR REVIEW

- Key guidance metrics met or exceeded for the sixth consecutive year
- All-in sustaining costs (AISC) decreased by 7% to \$976/oz in 2018 from \$1,054/oz in 2017
- Adjusted EBITDA of \$1.48bn despite asset sales and a flat gold price
- Headline earnings per share increased to 53c in 2018, from 6c in 2017
- Free cash flow improved significantly to \$67m from \$1m in 2017
- Dividend of ZAR 95 cents per share (approximately 7 US cents per share) declared
- Net debt down 17% to \$1.66bn in 2018 from \$2bn in 2017 with the Net debt to Adjusted EBITDA ratio lower at 1.12 times
- Record low All-injury frequency rate (AIFR), down 36% year-on-year to 4.81 per million hours in 2018
- Obuasi redevelopment initiated following regulatory and fiscal agreements ratified by the Parliament of Ghana
- Reserve additions at Geita, Sunrise Dam and Cerro Vanguardia; maiden reserve declared at Quebradona in Colombia

SECOND HALF REVIEW

- Strong operating performance
- Free cash flow generation of \$118m, with \$85m generated in the fourth quarter
- South African restructuring completed, and operations now free cash flow-positive

Financial and Operating Report
for the six months and year ended 31 December 2018

CORPORATE AND STRATEGIC REVIEW

AngloGold Ashanti recorded another solid performance in 2018, making steady progress on strategic efforts to improve the quality of its portfolio, strengthen its balance sheet and advance value-enhancing options in its project pipeline. Cash flow and earnings showed steady growth over 2018, and for the sixth consecutive year, production, capital and all cost guidance metrics were met or improved upon.

Cash flow from the business continues to improve. Adjusted EBITDA in 2018 was little changed at \$1,480m, versus \$1,483m in 2017, as a result of a flat gold price and despite a 355,000oz drop in production following the sale and closure of mines in South Africa. All-in sustaining costs (AISC) of \$976/oz in 2018, compared to \$1,054/oz in 2017, were lower than the guidance range, continuing the shift towards the bottom end of the industry cost curve. Safety saw another improvement, with the all-injury frequency rate (AIFR) falling 36% to a record 4.81 per million hours worked in 2018, from a rate of 7.49 per million hours worked in 2017.

Restructuring of the South African asset base was completed after a collaborative effort with key stakeholders. Redevelopment of the Obuasi Gold Mine, a transformational project for AngloGold Ashanti and Ghana, also commenced. In addition, the balance sheet was strengthened after debt was further reduced and some revolving credit facilities were refinanced. Furthermore, progress was made on self-funded brownfields projects aimed at sustainably improving mine lives and margins.

Exploration, which remains a cornerstone of the business, delivered another strong result, as the maiden reserve for the Quebradona project in Colombia was registered. The efforts of the exploration programme resulted in added gold ore reserves of 4.3Moz and mineral resource of 4.5Moz for the year ended 31 December 2018.

	Guidance 2018	Actual 2018	Met / Improved
Production ('000 oz)	3,325 - 3,450	3,400	þ
Total cash costs (\$/oz)	770 - 830	773	þ
All-in sustaining costs (\$/oz)	990 - 1,060	976	þ
Capital expenditure (\$m)	800 - 920	721	þ

Strategic Priorities

Maintaining a reliable track record of predictable, rational behaviour as custodians of shareholder capital is central to our approach. Capital allocation will remain disciplined and focused on improving value creation without placing financial or operating risk on the business.

This model does not prioritise scale for its own sake, but rather focuses on patient and disciplined work to widen margins, lift returns, increase cash flow and improve direct returns to shareholders over time. Given AngloGold Ashanti's current valuation and the suite of opportunities available within its existing portfolio and project pipeline, AngloGold Ashanti favours organic opportunities to create value, over those available through acquisition.

Our equity remains an important asset that should be protected while efforts are undertaken to close the considerable valuation gap that exists with global industry peers. Within this framework, we will target returns of at least 15% through the cycle, using conservative discount rates that account for specific jurisdictional and operating risks.

Preserving the integrity of the balance sheet is fundamental to the long-term health of the business and enforces disciplined decision-making in allocating capital. This means that the Company will rank and prioritise its investments, assessing them not only on their returns but also on their affordability with respect to maintaining leverage ratios at or around targeted levels as well as improving returns to its shareholders. Importantly, the Company

will weigh these competing priorities and consider the full suite of financing opportunities available when determining whether to proceed with an investment, notably partnerships, asset sales and project financing.

For a gold-producing company such as AngloGold Ashanti, which produces a single, cyclical commodity in an increasingly complex global operating environment, it is our view that over time, lower levels of debt will translate into lower risk and added strategic flexibility. Taking this into account, the Company is now targeting a lower Net debt to Adjusted EBITDA ratio of 1.0 times through the cycle, down from the previous target of 1.5 times. We believe this new target is achievable, even as we invest inward, pay dividends to shareholders subject to approval by the board of directors (Board) and service debt obligations.

Our dividend policy remains to pay out 10% of free cash flow, before growth capital, subject to the approval of the Board. Although currently modest, the dividend policy represents a key element of our capital allocation policy, namely a dividend as a 'royalty' owed to shareholders from the surplus cash generated by the business, before any investment in growth is pursued.

AngloGold Ashanti places a premium on a clear and uncompromising method of allocating capital. This means that certain investments may not be made if the returns they offer rank below other available opportunities within the portfolio. For example, given fiscal uncertainty related to the Sadiola sulphide project, the Company and IAMGOLD Corporation initiated a process last year to identify third parties that may be interested in acquiring their collective interest in Sadiola. In addition, a process to divest the Cerro Vanguardia mine in Argentina (CVSA) is now also underway. As with Mali, Argentina has been an excellent jurisdiction for the Company for almost two decades, but with competing demands for limited capital, another owner may be better placed to invest in extending the life of these assets. Through these processes we aim to achieve both fair value for these assets, and to place them in the hands of buyers with the operational track record and financial capacity to take them forward. If we cannot fulfil these objectives, we will retain these assets.

In South Africa, the difficult but necessary work of restructuring the loss-making portfolio into a smaller business was completed, recently returning these assets to generating free cash flow. To protect the cash flows of the South African region from Rand gold price risk for 2019,

Preliminary Condensed
Financial Information for the
year ended 31 December 2018

-

www.AngloGoldAshanti.com

a short-term Rand gold hedge was entered into on a zero cost collar basis at a floor of R545,000/kg and an average cap of R725,500/kg for 300koz of our South African gold production.

AngloGold Ashanti has one of the industry's top exploration teams. Over the past 15 years, the Company discovered 49Moz of Mineral Resource from its portfolio outside of South Africa, averaging roughly 3.3Moz of gold a year at an average discovery cost of \$34/oz from its brownfields exploration and \$13/oz from its generative greenfields programme. The Company will continue investing in exploration to ensure that its pipeline of options remains well stocked and that the Company can sustain itself without being forced into expensive and complex mergers and acquisition activity. This approach is well-supported by a strong track record.

As the business becomes even leaner and more efficient, greater management focus will be applied to areas of growth and improvement. Key areas of focus for 2019 remain bringing Obuasi into production, executing on a series of affordable, high return brownfields improvements and progressing two key projects in Colombia up the value curve. Operational Excellence initiatives remain at the heart of our efforts to counter inflation and improve margins.

FULL-YEAR REVIEW

Production for 2018 came in toward the top end of guidance at 3.400Moz. Compared to 2017, production was 9% lower mainly due to the sale and closure of assets in South Africa. Production from retained operations for 2018, excluding Moab Khotsong, Kopanang and TauTona, was 3.349Moz at a total cash cost of \$765/oz, compared with 3.279Moz at a total cash cost of \$738/oz in 2017. AISC for these retained operations were \$968/oz, compared with \$1,017/oz in the same period last year. AISC for the International operations was \$920/oz for 2018 compared to \$972/oz for 2017. AISC for the South African operations, including Moab Khotsong, Kopanang and TauTona, was \$1,178/oz compared with \$1,245/oz in 2017.

Cash flow from operating activities for the year ended 31 December 2018 decreased by 14% to \$857m compared to \$997m in 2017, reflecting working capital lockups of \$131m and the retrenchment costs related to the restructuring the South African business unit. In 2018, the Company generated \$205m of operating cash flow less capital expenditure compared to \$167m in 2017 reflecting a solid operating performance and lower capital expenditures. Free cash flow for the year, before taking growth capital into account, was \$217m versus \$125m a year earlier.

Free cash flow was negatively affected by delayed Kibali loan repayments due to the presidential elections in the DRC, which slowed down the administrative processes. It is anticipated that these loan repayments will resume during the course of this year. Free cash flow excluding abnormal costs such as the South Africa region redundancies, financing costs and other costs was \$140m in 2018, compared to \$50m a year earlier.

Total capital expenditure (including equity accounted investments) decreased by 24% to \$721m in 2018, compared to \$953m in 2017 and below the bottom end of the market guidance of between \$800m to \$920m. This included project capital expenditure of \$148m invested in growth projects at Obuasi, Siguiri and Kibali in Continental Africa and Mponeng in South Africa. Capital expenditures were lower in South Africa due to the sale of assets in the region early in the year. Capital expenditures were also lower in the Democratic Republic of the Congo (DRC) at Kibali as the project development phase is coming to an end and the asset is ramping up production. In Guinea at Siguiri, investment was made in the brownfields expansion project which was completed towards the end of 2018. The new combination plant is currently undergoing commissioning ahead of ramp-up to full production. In Australia, capital investments were made towards a new secondary ball mill at Tropicana and completion of the Recovery Enhancement Project at Sunrise Dam.

Headline earnings for the year ended 31 December 2018 were \$220m, or 53 US cents per share, compared with \$27m, or 6 US cents per share, in 2017. Adjusted earnings before interest, tax, depreciation and amortisation (Adjusted EBITDA) of \$1,480m in 2018 (compared to \$1,483m in 2017) was essentially flat year-on-year.

The ratio of Net debt to Adjusted EBITDA at the end of December 2018 was 1.12 times compared with 1.35 times at the end of December 2017. Management has successfully maintained financial flexibility by remaining at or below its targeted leverage Net debt to Adjusted EBITDA ratio of 1.5 times, and well below the covenant ratio of 3.5 times, which applies under our revolving credit agreements.

Net debt decreased by 17% to \$1.659bn at 31 December 2018, from \$2.001bn at the 31 December 2017. Financial flexibility was further improved in October 2018, when a new five-year \$1.4bn multi-currency revolving credit facility was agreed with our banking syndicate replacing our existing \$1bn US Dollar and A\$500m Australian Dollar facilities. Strong liquidity is provided both by this new revolving credit facility, which was fully undrawn at the end of 2018, and \$329m in cash.

SECOND HALF YEAR REVIEW

Production from retained operations for the second half of 2018, excluding Moab Khotsong, Kopanang and TauTona, was 1.722Moz at a total cash cost of \$726/oz, compared to 1.761Moz at a total cash cost of \$733/oz for the last six months of 2017. AISC for these retained operations were \$936/oz for the last six months of 2018, compared to \$1,002/oz for the same period in 2017. AISC for the International operations was \$895/oz for the last six months of 2018 compared to \$959/oz for the last six months of 2017. AISC for the South African operations, including Moab Khotsong, Kopanang and TauTona, was \$1,033/oz compared with \$1,231/oz in the last six months of 2017.

Total production for the Company, including those operations either sold or closed earlier in 2018, was 1.772Moz at a total cash cost of \$726/ oz for the six months ended 31 December 2018, compared to 2.007Moz at a total cash cost of \$787/oz for the last six months of 2017. AISC for this set of assets decreased by 10% to \$936/oz for the second half of 2018, versus \$1,038/oz in the second half of 2017.

Free cash flow of \$118m was generated in the second half of 2018, compared to \$162m for the second half of 2017. The Company generated \$204m of free cash flow, before taking growth capital into account, during the last six months of 2018, compared to \$231m during the second half of 2017.

Headline earnings were \$120m, or 29 US cents per share, for the second half of 2018 versus \$115m, or 28 US cents per share, in the second half of 2017. Adjusted earnings before interest, tax, depreciation and amortisation (Adjusted EBITDA) was \$756m, during the second half of 2018, compared to \$872m during the second half of 2017.

Preliminary Condensed
Financial Information for the
year ended 31 December 2018

-

www.AngloGoldAshanti.com

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 6-K

Capital expenditure in the second half of 2018 was \$387m (including equity accounted investments) compared to \$499m in the second half of 2017. Of the capital spent, non-sustaining project capital expenditure amounted to \$86m during the last six months of 2018, compared to \$70m during the second half of 2017.

Summary of six months-on-six months and year-on-year operating and cost variations:

2019 Guidance Update

	Guidance	Notes
Production (000oz)	3,250 - 3,450	Production will be back weighted, with a stronger second half expected for Geita, Siguiri and Brazil
Costs	All-in sustaining costs (\$/oz)	935 - 995
	Total cash costs (\$/oz)	730 - 780
	Corporate costs (\$m)	75 - 85
Overheads	Expensed exploration and study costs (\$m)	130 - 140
	Total (\$m)	910 - 990
Capital expenditure	Sustaining capex (\$m)	520 - 560
	Non-sustaining capex (\$m)	390 - 430
Depreciation and amortisation (\$m)	680	
Depreciation and amortisation - included in equity accounted earnings (\$m)	160	Earnings of associates and joint ventures
Interest and finance costs (\$m) - income statement	130	
Other operating expenses (\$m)	85	Primarily related to the costs of care and maintenance for Obuasi and South African region

Economic assumptions are as follows: ZAR14.00/\$, \$/A\$0.75, BRL3.65/\$, AP40.00/\$; Brent \$74/bl.

Both production and cost estimates assume neither operational or labour interruptions, or power disruptions, nor further changes to asset portfolio and/or operating mines and have not been reviewed by our external auditors. Other unknown or unpredictable factors could also have material adverse effects on our future results and no assurance can be given that any expectations expressed by AngloGold Ashanti will prove to have been correct. Accordingly, actual results could differ from guidance and any deviation may be significant. Please refer to the Risk Factors section in AngloGold Ashanti's annual report on Form 20-F for the year ended 31 December 2017, filed with the United States Securities and Exchange Commission (SEC).

SAFETY UPDATE

It is with deep regret that we report three fatalities which occurred during the first half of the year. In Brazil there was one fatality following an electricity-related incident in January. In the South Africa region at Moab Khotsong a tramming incident caused one fatality in February and at Mponeng a mechanical loader operator was fatally injured in a seismic fall of ground in April. The All-Injury Frequency Rate (AIFR), the broadest measure of workplace safety, decreased by 36% to 4.81 injuries per million hours worked for 2018, compared to 7.49 injuries per million hours worked for the previous year. AIFR for the quarter ended 31 December 2018 was 3.59 injuries per million hours worked, compared to 6.51 injuries per million hours worked for the same period in the previous year.

OPERATING HIGHLIGHTS

The Continental Africa region produced 1,512,000oz at a total cash cost of \$773/oz in 2018, compared to 1,453,000oz at a total cash cost of \$720/oz in 2017. AISC were \$904/oz for the year ended 31 December 2018, compared to \$953/oz for the year ended 31 December 2017. The region delivered a solid performance with production boosted by higher tonnes treated particularly from underground mining at Kibali and Geita and improved underground grade from Geita.

In the DRC, Kibali's production was 363,000oz at a total cash cost of \$600/oz for the year ended 31 December 2018, compared to 268,000oz at a total cash cost of \$784/oz for the year ended 31 December 2017. The increase in production was mainly due to the 26% increase in recovered grade as underground mining displaced lower-grade

open-pit ore, an improved recovery factor and an 8% increase in tonnage treated as a result of improved plant performance. Total cash cost consequently fell 23% due to higher gold production, partly offset by higher underground production costs compared to the open pit and a higher royalty rate introduced in the second half of the year.

In Ghana, Iduapriem's production increased to 254,000oz at a total cash cost of \$804/oz in 2018, compared to 228,000oz at a total cash cost of \$823/oz in 2017. Production increased 11% year-on-year to a record, driven by 6% higher tonnage treated due to improved grinding and plant efficiency and 5% higher recovered grade, resulting from mining deeper, higher-grade areas in the Teberebie pit. Total cash cost dropped 2% over the year due to the increased production despite inflation effects related to higher fuel prices and mining costs particularly in the second half of the year.

During 2018, Obuasi remained in the care and maintenance phase whilst the redevelopment project for recommencing operations continued. The update on the Obuasi project is provided under "Project Updates" below.

In Guinea, Siguri produced 242,000oz at a total cash cost of \$844/oz in 2018, compared to 324,000oz at a total cash cost of \$725/oz in 2017. Production was negatively impacted by a 16% decrease in recovered grade from treating lower grade oxide material and an 11% decrease in tonnes due to delays in the commissioning of the Carbon-in Leach (CIL) combination plant. Total cash cost increased year-on-year as a result of lower production, partly offset by lower mining costs compared to the same period the year before.

In Tanzania, Geita produced 564,000oz at a total cash cost of \$804/oz for the year ended 31 December 2018, compared to 539,000oz at a total cash cost of \$608/oz for the year ended 31 December 2017. Recovered grade saw a 5% increase year-on-year due to a range of operational improvements (advance grade control and underground mining efficiencies), which assisted in accessing higher grade ore particularly in the fourth quarter of 2018. Total cash costs, however, increased as a result of increased underground and open-pit mining costs compared to the same period in the previous year, in addition to some operational challenges in the primary crusher during the second half of the year.

In Mali, Sadiola produced 59,000oz at a total cash cost of \$938/oz in 2018, compared to 63,000oz at a total cash cost of \$900/oz in 2017. Production decreased due to a 9% drop in recovered grade from limited availability of the oxide ore as mining ceased during the year. The mine transitioned to a stockpile treatment plan at the beginning of the year, partly compensated for by a 3% increase in tonnes treated as a result of newly installed variable speed drives in the mill. Total cash costs increased as a result of lower production, partly offset by lower operating costs compared to the same period the year before.

Preliminary Condensed
Financial Information for the
year ended 31 December 2018

-

www.AngloGoldAshanti.com

Production at Morila increased to 30,000oz at a total cash cost of \$1,145/oz for the year ended 31 December 2018, compared to 28,000oz at a total cash cost of \$974/oz for the year ended 31 December 2017. The increase in production was driven by a 19% increase in recovered grade as mining resumed during the year, resulting in the treatment of higher grade ore, partly offset by a 11% decrease in throughput due to treatment of harder ore. Total cash cost, however, increased due to higher operating cost as a result of the resumption of mining activities.

The Americas region produced 776,000oz at a total cash cost of \$624/oz for the year ended 31 December 2018, compared to 840,000oz at a total cash cost of \$638/oz for the year ended 31 December 2017. AISC were \$855/oz in 2018, compared to \$943/oz achieved in 2017.

In Argentina at Cerro Vanguardia, full year output in 2018 was maintained at the same level as 2017 producing 282,000oz at a total cash cost of \$476/oz, compared to 283,000oz at a total cash cost of \$522/oz in 2017. The mine managed to maintain production, despite lower underground grade, mainly because of higher tonnes mined and treated. Total cash costs fell mainly as a result of the weaker exchange rate due to the devaluation of the Argentine Peso against the US Dollar as well as improved efficiencies. These positive effects were partially attenuated by rapidly rising inflation which ended the year at 47%, mostly related to salary increments, and unfavourable stockpile movements. Lower average silver price and lower volumes sold also affected costs negatively.

A number of Operational Excellence initiatives were identified and implemented during 2018, including underground development optimisation, cost reduction in material and services contracts, workforce recruitment freeze, nitrate and flocculants optimisation, cost reduction in mine drilling steel and cyclone pumps liners, and overhead restructuring.

In September 2018, the Government of Argentina introduced the payment of export duties on exported goods. In terms of an existing tax stability agreement, Cerro Vanguardia is entitled to a refund of these export duties. At 31 December 2018, \$14m was reflected as receivable and impacted free cash flow generated by the operation.

In Brazil, production was 494,000oz at a total cash cost of \$706/oz for the year ended 31 December 2018, compared to 557,000oz at a total cash cost of \$693/oz for the year ended 31 December 2017. Total cash costs were impacted by lower year-on-year production and inflationary pressure, partially offset by the Operational Excellence initiatives and favourable exchange rates. AISC was \$966/oz for the year ended 31 December 2018, compared to \$1,029/oz for the year ended 31 December 2017. This decrease is mainly due to lower sustaining capital expenditure driven by increased focus on capital management and benefits derived for the Operational Excellence initiatives. For the second half of 2018, production was 264,000oz at a total cash cost of \$650/oz, compared to 302,000oz at a total cash cost of \$692/oz during the same period in 2017. AISC were \$922/oz for the second half of 2018, compared to \$994/oz during the same period in 2017.

At AGA Mineração, full-year production in 2018 was 364,000oz at a total cash cost of \$723/oz, compared to 424,000oz at a total cash cost of \$671/oz in 2017. Production was lower as the Cuiabá complex faced delays in development and infrastructure constraints. During the fourth quarter of 2018, operating performance improved as measures were taken to improve mine quality by improving stope availability, drilling and mine recoveries while ensuring compliance to plan, with an offset due to the timing of sales. At Córrego do Sítio (CdS), lower grades in the sulphide operation and excessive rainfall resulted in 8% lower production. Production was also impacted by lower tonnes placed on the heap leach, model changes, and production stoppages due to strikes.

At Serra Grande, full-year production in 2018 was 130,000oz at a total cash cost of \$660/oz, compared to 133,000oz at a total cash cost of \$764/oz in 2017. Production was lower due to less ore mined following delays in receiving environmental deforestation and waste dump permits.

AngloGold Ashanti has a clear framework that sets principles, standards and guidelines for the construction, management and oversight of its tailings storage facilities (TSFs). It is our obligation to ensure that our TSFs are

stable, non-polluting and contained. We are guided in this regard by international best practice, and conduct regular detailed inspections by internal specialists and independent third-party experts, as well as ongoing monitoring and ongoing preventive maintenance. On 7 February 2019, Regulatory Authorities of Brazil's Minas Gerais state suspended all tailings facilities in the state constructed using the upstream design method. AngloGold Ashanti does not have upstream TSFs in the state, but it does have one Centerline facility at the CdS operation. As a precautionary step, CdS's tailings facility was temporarily suspended while the facility's design is confirmed by the regulators as the Centerline method. We are in close dialogue with the regulator in this regard, and look forward to resuming operation at the site as soon as they have satisfied themselves of the design of the facility. The TSF supports production of about 95,000oz a year at CdS. The balance of 35,000oz of CdS's annual production comes from its heap leach, and so is unaffected by the TSF suspension. In the meantime, scheduled maintenance is underway and mining at the site continues as we stockpile ore ahead of the plant, given that the plant at CdS has processing headroom above what is normally mined.

The Australia region produced 625,000oz at a total cash cost of \$762/oz for the year ended 31 December 2018, compared to 559,000oz at a total cash cost of \$743/oz for the year ended 31 December 2017. AISC were \$1,038/oz in 2018, compared to \$1,062/oz in 2017. For the second half of 2018, the Australia region produced 319,000oz at a total cash cost of \$735/oz, compared to 305,000oz at a total cash cost of \$717/oz for the same period in 2017.

Higher mill feed grades in the first and the last quarters of 2018 contributed to a 21% increase in year-on-year production at Sunrise Dam, which delivered 289,000oz of gold production at a total cash cost of \$920/oz in 2018, compared to 238,000oz at a total cash cost of \$919/oz in 2017. Performance of the new Recovery Enhancement Project (REP) has been below expectation, however a structured optimisation programme is delivering positive results and, along with a higher proportion of Vogue ore in the feed blend, recovery is expected to increase to Feasibility Study levels during 2019. A number of critical once-off capital projects were completed in 2018, including construction of the REP, a multi-year extension to the Tailings Storage Facility and the installation and commissioning of two 2MW primary ventilation fans.

Tropicana produced 336,000oz at a total cash cost of \$594/oz in 2018, compared to 321,000oz at a total cash cost of \$564/oz in 2017. At Tropicana, production increased 5% due to higher mill feed grades and higher mill throughput. At Tropicana the second 6MW ball mill was commissioned ahead of schedule in November 2018 and full ramp-up achieved within a week delivering increased throughput and improved metallurgical recovery in line with the Feasibility Study. In December 2018, the Tropicana JV partners announced that a Feasibility Study into the development of an underground mine beneath the Boston Shaker pit was underway after a Pre-Feasibility Study confirmed that underground mining was technically and financially viable.

The South Africa region produced 487,000oz at a total cash cost of \$1,033/oz for the year ended 31 December 2018, compared to 903,000oz at a total cash cost of \$1,085/oz for the year ended 31 December 2017. The lower production decrease reflects fewer mines in the region with only two months of contribution from Kopanang and Moab Khotsong, following their sale on 28 February 2018. TauTona ceased mining in

Preliminary Condensed
Financial Information for the
year ended 31 December 2018

-

www.AngloGoldAshanti.com

September 2017 and has been placed in orderly closure. AISC for the South Africa region were \$1,178/oz in 2018, compared to \$1,245/oz in 2017.

Production from retained operations was 436,000oz in 2018, up 2% year-on-year. AISC from the retained operations was down 11% for the second half of 2018, mainly as a result of higher gold output. Cost management efforts continue with earnest in the South Africa region, aimed at ensuring that both on- and off-mine cost structures are appropriately resized for the smaller production base. As part of the Mponeng safe production strategy related to the improvement of face time, Mponeng signed a new shift arrangement agreement with its South Africa trade unions. The new shift arrangements were successfully implemented as of 12 November 2018 and are expected to help improve productivity.

At Mponeng, full-year production in 2018 was 265,000oz at a total cash cost of \$977/oz, compared to 224,000oz at a total cash cost of \$1,014/ oz in 2017. Accessing higher-value reef and improving mining practices delivered an increase of 18% in production year-on-year. During the second half of 2018, production increased by 24% year-on-year driven by improved mine call factor, increased tonnes treated, and improvement in underground grade as a result of better mining mix and recoveries.

At Mine Waste Solutions (MWS), production for the year ended 31 December 2018 was 103,000oz at a total cash costs of \$812/oz, compared to 109,000oz at a total cash cost of \$780/oz for the year ended 31 December 2017. MWS remained cash positive despite the 5% year-on-year decline in production, which was mainly due to lower recoveries as a result of carbon management challenges experienced during the third quarter of 2018, which improved toward the end of 2018. Tonnages ended lower year-on-year, impacted by unplanned stoppages due to inclement weather and associated power outages. Approximately 167 hours of power failures were experienced in December alone. Engagements were held with Eskom management, the electricity public utility, and a protocol was agreed to create flexibility during inclement weather.

Hard Rock production for the year declined 18% while production at the Vaal River Surface Sources declined reflecting the sale of the Mispah and West Gold plants. Yield contribution from West Wits Surface Sources was also 22% lower year-on-year due to the areas that were reclaimed at the Savuka Marginal Ore Dumps and Tailings Storage Facilities (TSF). Accordingly, mining strategies were changed during the third quarter of 2018 and feed grades are beginning to improve.

CORPORATE UPDATE

Board and CEO changes

Mr Kelvin Dushnisky was appointed as Chief Executive Officer and an executive member of the Board of Directors of AngloGold Ashanti, effective 1 September 2018. The Company also announced the appointment of two independent non-executive directors to its Board of Directors, Mr Alan Ferguson and Mr Jochen Tilk, with effect from 1 October 2018 and 1 January 2019, respectively.

Changes in Executive Portfolios

Some organisational and management changes have taken place primarily drawing from the well-developed pool of talent from within the organisation. These appointments are being implemented in parallel with the planned retirements of COO: South Africa Chris Sheppard, Executive Vice President: Sustainable Development David Noko, and Executive Vice President Strategy & Business Development Charles Carter. The global operating base will remain in two regions, each overseen by a chief operating officer.

The Africa portfolio, which will now include the rationalised South Africa footprint, will be overseen by Sicelo Ntuli, formerly Senior Vice President: Continental Africa. Sicelo has done excellent work in driving the turnaround of Iduapriem and for the past two years under Ludwig Eybers' guidance, has had line responsibility for the Continental

Africa region, which has delivered consistently strong operating performances.

Moses Madondo, who did exceptional work as Senior Vice President: Vaal River Region, before the sale of those assets last year, has assumed responsibility for our South Africa portfolio, as Senior Vice President: South Africa.

Ludwig Eybers will remain COO: International, with greater focus on advancing our Colombia options up the value curve, unlocking the potential that exists within our Brazil and Australia assets, and ensuring our global exploration programme continues to deliver strong outcomes.

Pierre Chenard, formerly Senior Vice President of Business Development of Rio Tinto Alcan Inc., and also its general counsel, has been named Executive Vice President: Business Development & Strategy. Pierre, who has also held roles in the North American gold sector with Cambior, Hope Bay and latterly as a director on the Board of Osisko Gold Royalties Ltd., brings a wealth of experience across a number of jurisdictions, to the role.

Stewart Bailey, formerly Senior Vice President of Investor Relations & Group Communications, has been named Executive Vice President: Corporate Affairs, a portfolio that will include stakeholder relations and the broader ambit of sustainability policy and oversight. His in-depth knowledge of the Company and many of its stakeholders, close cooperation with the sustainability team over several years and ongoing work in integrating environmental, social and governance reporting into the broader business, provide a strong foundation for this role.

The incumbents have been working alongside their successors in each role ensuring a seamless transition in those areas.

Developments in the South Africa region

AngloGold Ashanti reached a three-year wage agreement with all its trade unions in South Africa, effective 1 July 2018. The wage agreement includes wage increases over three years as well as a new shift arrangement, aimed at improving production with continued focus on safety.

Restructuring of the South African asset portfolio was completed in December 2018. The restructuring process was focused on protecting the longer-term sustainability of the business to ensure that both on- and off-mine cost structures are appropriate for the significantly smaller production base as compared to historic levels. The process was completed reaching a balance between preserving local jobs while rightsizing overhead structures for the current smaller production base. Forced retrenchments were mitigated, from 2,000 initially anticipated in the most recent restructuring, to 72, by offering voluntary severance packages, and selling non-core assets, such as healthcare facilities and rail networks in the Vaal River region, which helped preserve jobs through a transfer of ownership.

Obuasi Arbitration Proceedings Resolved

The Obuasi mine, operated by AngloGold Ashanti (Ghana) Limited, had been the subject of a dispute with the Republic of Ghana since February 2016, when military protection was withdrawn from the mine and the site was being overrun by illegal miners for close to nine months. The

Preliminary Condensed
Financial Information for the
year ended 31 December 2018

-

www.AngloGoldAshanti.com

case was registered with the International Centre for Settlement of Investment Disputes in May 2016. The dispute has now been resolved to the parties' mutual satisfaction. As a result, on 19 July 2018, the Company submitted a request to the Tribunal for the legal proceedings to be discontinued. Furthermore, the Parliament of Ghana has ratified a number of regulatory and fiscal agreements with the Company in relation to the redevelopment of the mine into a modern and mechanised operation, and environmental permits have been issued by the relevant Ghanaian agency, both events marking an important step for the mine's future.

Tanzania Arbitration Proceedings Update

With reference to the arbitration proceedings, previously disclosed, which commenced in July 2017, AngloGold Ashanti's focus continues to be on pursuing a collaborative dialogue with the government of Tanzania. The arbitration proceedings are currently suspended until July 2019.

Yatela Sales Process

On 14 February 2019, Sadiola Exploration Limited (SADEX), the subsidiary jointly held by AngloGold Ashanti and IAMGOLD Corporation, entered into a share purchase agreement with the Government of Mali, whereby SADEX agreed to sell to the Government of Mali its 80% participation in Société d'Exploitation des Mines d'Or de Yatela (Yatela), for a consideration of USD 1. The transaction remains subject to the fulfillment of a number of conditions precedent, among which the adoption of two laws, confirming the change of status of Yatela to a State Entity, and also the creation of a dedicated state agency, notably in charge of mine rehabilitation and closure. As part of the transaction, and upon its completion, SADEX will make a one-time payment to the said state agency, in an amount corresponding to the estimated costs of completing the rehabilitation and closure of the Yatela site, and also financing certain outstanding social programmes. Upon completion and this payment being made, SADEX and its affiliate companies will be released of all obligations relating to the Yatela project including those relating to rehabilitation, mine closure and the financing of social programmes.

Settlement of Silicosis and TB class action

On 3 May 2018, Richard Spoor Inc, Abrahams Kiewitz Inc and the Legal Resources Centre (representing claimants in the silicosis and tuberculosis class action litigation) and African Rainbow Minerals, Anglo American SA, AngloGold Ashanti, Gold Fields, Harmony and Sibanye-Stillwater announced that they have reached a settlement in this matter. Following this announcement, on 13 December 2018, the Johannesburg High Court issued a court order setting out the processes in terms of which members of the settling classes and any interested parties should be invited to show cause why the settlement should not be made an order of court. Both the court order and the settlement agreement set out steps that will need to be followed from this point. For more details on the process see: www.silicosissettlement.co.za and <https://www.oldcollab.co.za/>.

JSE Sponsor and Joint Corporate Brokers

The Company's previous JSE Sponsor, Deutsche Securities (SA) Proprietary Limited, resigned as sponsor following the closure of Deutsche Bank's Sponsor Services business in South Africa. The Standard Bank of South Africa Limited was appointed as equity sponsor, with effect from 30 November 2018, and debt sponsor, with effect from 31 January 2019.

Additionally, JPMorgan Chase & Co. and Royal Bank of Canada were named joint corporate brokers, effective 30 November 2018.

PROJECT UPDATES

Obuasi Redevelopment Project

Following receipt of all the requisite Ghanaian Government approvals, including parliamentary ratification, and environmental approvals in June 2018, redevelopment of the Obuasi high-grade orebody has started in earnest.

Establishment of the project and operating teams have progressed well and all key roles have been filled. Detailed design has continued, focusing on the processing plant and underground infrastructure. Critical long-lead items have been ordered. Demolition of redundant processing plant structures has commenced. Refurbishment planning was completed, and works are set to commence by end of March 2019. The housing refurbishment programme has also commenced and the expansion of the mining contractor's camp is well advanced.

The underground mining fleet has been delivered and commissioned. The underground mining contractor has commenced mobilisation. Operational readiness activities, including the design of the mine operating systems, has progressed to plan.

The project is being developed in two phases, the first is to achieve production at 2,000tpd with first gold pour at the end of 2019. The second is to achieve production of 4,000tpd by the end of 2020.

In order to ensure meaningful Ghanaian participation in the project, a key commitment made by AngloGold Ashanti at the outset of Obuasi's redevelopment, the mining contract was awarded to a joint venture Underground Mining Alliance Limited (UMA) formed by Ghana's Rocksure International (Rocksure) (30%) and Australia's African Underground Mining Services (AUMS) (70%), which will also help facilitate the transfer of underground mining expertise to Accra-based Rocksure. To facilitate the JV and effect operating cost and import duty savings, AngloGold Ashanti (Ghana) Limited purchased the mining fleet at a cost of approximately \$46m. As announced in November 2018, this mining fleet purchase increases the initial project capital expenditure range from \$450 to \$500m to \$495 to \$545m. However, at the same time, this purchase reduces the contract rates over the period of the contract and is estimated to improve AISC by approximately \$25/oz.

Given the delayed receipt of permit approvals in 2018, some capital expenditure has been deferred from 2018 into 2019 and from 2019 into 2020. The latest outlook on the capital spend profile is expected to be 10%, 60%, and 30% in 2018, 2019 and 2020, respectively.

Siguiri Combination Plant

The new Combination Plant construction has been completed and commissioning is expected at the end of the first quarter of 2019. The plant will allow for the treatment of harder rock at the Siguiri mine. Additionally, a new power plant intended to bridge the gap to meet the mine's additional power requirements was completed and ready for commercial operations at the end of the fourth quarter of 2018, as planned.

Mponeng Project

During 2018, the raise boring of the reef pass from 123 level to 126 level was completed and the construction contractor was mobilised in December 2018 to construct the tip and control chute. The process of installing additional support to consolidate the hanging wall and side walls of the pump chamber and substation will follow in the second half of 2019. Alternative project design configurations are being studied for Phase 2.

Quebradona Project

At Quebradona (94.9% AngloGold Ashanti interest and 5.1% B2Gold interest) the prefeasibility study was completed. The maiden ore reserve has been declared of 1.26m tonnes of copper and 2.22Moz of gold. The study envisages a 6.2m tonnes per annum sub-level cave mining operation, with 23-year mine life averaging 1.21% copper plus 0.66g/t gold ore milled resulting in an IRR of 16.8%, at a gold price of \$1,240/oz and a copper price of \$2.90/lb.

AngloGold Ashanti will proceed with the feasibility study, the results of which will be announced in 2020. From January to April 2019, initial feasibility activities focused on defining and enhancing the scope further, will be conducted, with the EIA submission aimed for May 2019. During the second half of 2019, engineering work of the defined project will be the main focus.

Gramalote Joint Venture

The Gramalote project is a joint venture between AngloGold Ashanti (51%) and B2Gold (49%), with AngloGold Ashanti as the operator and manager of the project. Following additional infill and resource extension drilling the Mineral Resource model is being updated. The additional drilling has indicated the potential for resource growth and potentially higher grades through selectivity. Final budgets, schedules and work plans for advancing Gramalote will be developed once the Mineral Resource model has been finalised and the updated audited project economics are available.

EXPLORATION

See the Exploration Update document on the Company's website (www.anglogoldashanti.com) for a detailed update on both Brownfields and Greenfields exploration programmes.

MINERAL RESOURCE AND ORE RESERVE

The Mineral Resource and Ore Reserve for AngloGold Ashanti are reported in accordance with the minimum standards described by the South African Code for the Reporting of Exploration Results, Mineral Resources and Mineral Reserves (The SAMREC Code, 2016 Edition), and also conform to the standards set out in the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code, 2012 Edition).

The Mineral Resource is inclusive of the Ore Reserve component, unless otherwise stated. In complying with revisions to the SAMREC Code the changes to AngloGold Ashanti's Mineral Resource and Ore Reserve have been reviewed and it was concluded that none of the changes are material to the overall valuation of the Company. AngloGold Ashanti has therefore once again resolved not to provide the detailed reporting as defined in Table 1 of the SAMREC Code, apart from the maiden Ore Reserve declaration for Quebradona. The Company will however continue to provide the high level of detail it has in previous years in order to comply with the transparency requirements of the SAMREC Code.

AngloGold Ashanti strives to actively create value by growing its major asset - the Mineral Resource and Ore Reserve. This drive is based on active, well-defined brownfields and greenfields exploration programmes, innovation in both geological modelling and mine planning and continual optimisation of the asset portfolio.

PRICE

The SAMREC and JORC Codes require the use of reasonable economic assumptions. These include long-range commodity price and exchange rate forecasts. These are reviewed annually and are prepared in-house using a range of techniques including historic price averages.

The Mineral Resource sensitivities shown in the detail of this report use a base of \$1,400/oz and a range of \$200/oz, unless stated otherwise.

Gold Price

The following local prices of gold were used as a basis for estimation in the December 2018 declaration:

	Gold Price US\$/oz	Local prices of gold			
		South Africa ZAR/kg	Australia AUD/oz	Brazil BRL/oz	Argentina ARS/oz
2018 Ore Reserve	1,100	501,150	1,509	3,565	45,443
2017 Ore Reserve	1,100	512,059	1,491	3,573	17,898
2018 Mineral Resource	1,400	563,331	1,778	4,501	51,564
2017 Mineral Resource	1,400	601,870	1,824	4,492	21,242

Copper Price

The following copper price was used as a basis for estimation in the December 2018 declaration:

	Copper Price US\$/lb
2018 Ore Reserve	2.65
2018 Mineral Resource	3.30
2017 Mineral Resource	3.16

MINERAL RESOURCE

Gold:

The AngloGold Ashanti Mineral Resource decreased from 208.2Moz in December 2017 to 184.6Moz in December 2018. This gross annual decrease of 23.6Moz includes depletion of 3.9Moz and the disposal of assets of 20.1Moz. The balance of 0.4Moz reduction in Mineral Resource, results from an increase due to exploration and modelling of 4.5Moz and reductions due to revised geotechnical design requirements of 4.0Moz, other factors of 0.1Moz and changes in cost of 0.2Moz. The Mineral Resource has been estimated at a gold price of \$1,400/oz (2017: \$1,400/ oz).

Copper:

The AngloGold Ashanti Mineral Resource decreased from 3.63Mt (8,000Mlbs) in December 2017 to 3.61Mt (7,954Mlbs) in December 2018. This gross annual decrease of 0.02Mt includes a reduction due to methodology of 0.09Mt offset by a change in ownership of 0.05Mt and other factors which resulted in an increase of 0.02Mt. The Mineral Resource has been estimated at a copper price of US\$3.30/lb (2017: US\$3.16/lb).

ORE RESERVE

Gold:

The AngloGold Ashanti Ore Reserve decreased from 49.5Moz in December 2017 to 44.1Moz in December 2018. This gross annual decrease of 5.4Moz includes depletion of 3.6Moz. The loss after depletions of 1.8Moz, results from the disposal of assets in the South African region of 6.1Moz, additions due to exploration and modelling changes of 4.3Moz, whilst other factors resulted in a 0.1Moz addition and changes in economic assumptions resulted in a 0.1Moz reduction. The Ore Reserve has been estimated using a gold price of \$1,100/oz (2017: \$1,100/oz).

SALE OF ASSETS

AngloGold Ashanti sold various assets in the Vaal River region of its South African operations. The sales processes were finalised on the 28th February 2018. On conclusion of the sales and after depletions for that period of 2018 the final Mineral Resource and Ore Reserve at the time of the sale are shown below:

Kopanang: Mineral Resource	3.00Moz
Ore Reserve	0.36Moz
Moab Khotsong: Mineral Resource	16.20Moz
Ore Reserve	4.87Moz
Surface Operations: Mineral Resource	0.87Moz
Ore Reserve	0.87Moz

BY-PRODUCTS

Several by-products will be recovered as a result of processing of the gold Ore Reserve and Copper Ore Reserve. These include 0.37Mt of sulphur from Brazil, 32.68Moz of silver from Argentina and 23.58Moz of silver from Colombia.

CORPORATE GOVERNANCE

AngloGold Ashanti has established a Mineral Resource and Ore Reserve Steering Committee (RRSC), which is responsible for setting and overseeing the Company's Mineral Resource and Ore Reserve governance framework and for ensuring that it meets the Company's goals and objectives while complying with all relevant regulatory codes. Its membership and terms of references are mandated under a policy document signed by the Chief Executive Officer.

14

Over more than a decade, the Company has developed and implemented a rigorous system of internal and external reviews aimed at providing assurance in respect of Ore Reserve and Mineral Resource estimates. The following operations were subject to an external review in line with the policy that each operation project will be reviewed by an independent third party on average once every three years:

Mineral Resource and Ore Reserve at Iduapriem
Mineral Resource and Ore Reserve at Sunrise Dam
Mineral Resource and Ore Reserve at Cerro Vanguardia
Mineral Resource and Ore Reserve at Serra Grande
Mineral Resource and Ore Reserve at Quebradona

The external reviews were conducted by Pivot Mining Consultants Pty (Ltd), AMC Consultants Pty Ltd, Golder Associates Pty Ltd, Ausenco Engineering Canada Inc. and Optiro Pty Ltd respectively. Certificates of sign-off have been received from the companies conducting the external reviews to state that the Mineral Resource and/or Ore Reserve comply with the SAMREC and JORC Codes.

In addition, numerous internal Mineral Resource and Ore Reserve process reviews were completed by suitably qualified Competent Persons from within AngloGold Ashanti and no significant deficiencies were identified. The Mineral Resource and Ore Reserve are underpinned by appropriate Mineral Resource Management processes and protocols that ensure adequate corporate governance. These procedures have been developed to be compliant with the guiding principles of the US Sarbanes-Oxley Act of 2002 (SOX).

AngloGold Ashanti makes use of a web-based group reporting database called the Resource and Reserve Reporting System (R3) for the compilation and authorisation of Mineral Resource and Ore Reserve reporting. It is a fully integrated system for the reporting and reconciliation of Mineral Resource and Ore Reserve that supports various regulatory reporting requirements including the US Securities and Exchange Commission and the JSE under SAMREC. AngloGold Ashanti uses R3 to ensure a documented chain of responsibility exists from the competent persons at the operations to the Company's RRSC.

AngloGold Ashanti has also developed an enterprise-wide risk management tool that provides consistent and reliable data that allows for visibility of risks and actions across the group. This tool is used to facilitate, control and monitor material risks to the Mineral Resource and Ore Reserve, thus ensuring that the appropriate risk management and mitigation plans are in place.

COMPETENT PERSONS

The information in this report relating to exploration results, Mineral Resources and Ore Reserves is based on information compiled by or under the supervision of the Competent Persons as defined in the SAMREC or JORC Codes. All Competent Persons are employed by AngloGold Ashanti, except for Kibali and Morila, and have sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking. The legal tenure of each operation and project has been verified to the satisfaction of the accountable Competent Person and all Ore Reserves have been confirmed to be covered by the required mining permits or there exists a realistic expectation that these permits will be issued. This will be detailed in the 2018 Mineral Resource and Ore Reserve document.

Accordingly, the Chairman of the Mineral Resource and Ore Reserve Steering Committee, VA Chamberlain, MSc (Mining Engineering), BSc (Hons) (Geology), MGSSA, FAusIMM, assumes responsibility for the Mineral Resource and Ore Reserve processes for AngloGold Ashanti and is satisfied that the Competent Persons have fulfilled their responsibilities. VA Chamberlain has 31 years' experience in exploration and mining and is employed full-time by AngloGold Ashanti and can be contacted at the following address: 76 Rahima Moosa Street, Newtown, 2001, South Africa.

A detailed breakdown of Mineral Resource and Ore Reserve and backup detail will be provided on the AngloGold Ashanti website (www.anglogoldashanti.com) and www.aga-reports.com.

Independent auditor's review report on the condensed consolidated financial statements for the twelve months ended 31 December 2018 to the shareholders of AngloGold Ashanti Limited

We have reviewed the condensed consolidated financial statements of AngloGold Ashanti Limited (the 'Company') contained in the accompanying preliminary report on pages 20 to 40, which comprise the accompanying condensed consolidated statement of financial position as at 31 December 2018, the condensed consolidated income statement, statement of comprehensive income, statement of changes in equity and statement of cash flows for the twelve months then ended, and selected explanatory notes.

Directors' responsibility for the condensed consolidated financial statements

The directors are responsible for the preparation and presentation of these condensed consolidated financial statements in accordance with the requirements of the JSE Limited Listings Requirements for preliminary reports, as set out in note 1 to the condensed consolidated financial statements, and the requirements of the Companies Act of South Africa, and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility

Our responsibility is to express a conclusion on these condensed consolidated financial statements. We conducted our review in accordance with International Standard on Review Engagements (ISRE) 2410, which applies to a review of historical information performed by the independent auditor of the entity. This standard requires us to conclude whether anything has come to our attention that causes us to believe that the condensed consolidated financial statements are not prepared in all material respects in accordance with the applicable financial reporting framework. This standard also requires us to comply with relevant ethical requirements.

A review of financial statements in accordance with ISRE 2410 is a limited assurance engagement. We perform procedures, primarily consisting of making enquiries of management and others within the entity, as appropriate, and applying analytical procedures, and evaluating the evidence obtained.

The procedures performed in a review are substantially less than and differ in nature from those performed in an audit conducted in accordance with International Standards on Auditing. Accordingly, we do not express an audit opinion on these condensed consolidated financial statements.

Conclusion

Based on our review, nothing has come to our attention that causes us to believe that the condensed consolidated financial statements of the Company for the twelve months ended 31 December 2018 are not prepared, in all material

respects, in accordance with the requirements of the JSE Limited Listings Requirements for preliminary reports, as set out in note 1 to the condensed consolidated financial statements, and the requirements of the Companies Act of South Africa.

Notes
for the six months and year ended 31 December 2018

1 Basis of preparation

The financial statements in this report have been prepared in accordance with the historic cost convention except for certain financial instruments which are stated at fair value. The preparation of these financial statements are in terms of the JSE Listings Requirements and the accounting policies used are consistent with those used in the annual financial statements for the year ended 31 December 2017, except for the adoption of new or amended standards applicable from 1 January 2018 as set out below.

New and amended standards adopted by the group:

As a result of the following new and amended standards, the group has changed its accounting policies and made retrospective adjustments:

- IFRS 15 Revenue from Contracts with Customers,
- IFRS 9 Financial Instruments, and
- IFRIC 23 Uncertainty over Income Tax Treatments.

The impact of the adoption of these standards and the new accounting policies are disclosed in note 16.

The financial statements of AngloGold Ashanti have been prepared in compliance with the framework concepts and the measurement and recognition requirements of IAS 34, IFRS as issued by the International Accounting Standards Board, the South African Institute of Chartered Accountants Financial Reporting Guides as issued by the Accounting Practices Committee, Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council, JSE Listings Requirements and in the manner required by the South African Companies Act, 2008 (as amended) for the preparation of financial information of the group for the twelve months ended 31 December 2018. These financial statements should be read in conjunction with the company's audited consolidated financial statements and the notes thereto as at and for the year ended 31 December 2017.

Based on materiality, certain comparatives have been aggregated.

Income tax uncertainties

AngloGold Ashanti operates in numerous countries around the world and accordingly is subject to, and pays annual income taxes under, the various income tax regimes in the countries in which it operates. Some of these tax regimes are defined by contractual agreements with local government, and others are defined by the general corporate income tax laws of the country. The Company has historically filed, and continues to file, all required income tax returns and to pay the taxes reasonably determined to be due. In some jurisdictions, tax authorities are yet to complete their assessments for previous years. The tax rules and regulations in many countries are highly complex and subject to interpretation. From time to time, the Company is subject to a review of its historic income tax filings and in connection with such reviews, disputes can arise with the tax authorities over the interpretation or application of certain rules in respect of the Company's business conducted within the country involved.

13 Financial risk management activities

Borrowings

The rated bonds are carried at amortised cost and their fair values are their closing market values at the reporting date which results in the difference noted in the table below. The interest rate on the remaining borrowings is reset on a short-term floating rate basis and accordingly the carrying amount is considered to approximate the fair value.

	As at Dec 2018	As at Dec 2017
US Dollar million	Reviewed	Audited
Carrying amount	2,050	2,268
Fair value	2,084	2,377

Fair Value hierarchy

The group uses the following hierarchy for determining and disclosing the fair value of financial instruments:

Level 1: quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2: inputs other than quoted prices included in level 1 that are observable for the asset or liability, either directly (as prices) or indirectly (derived from prices); and

Level 3: inputs for the asset or liability that are not based on observable market data (unobservable inputs).

Types of instruments:

Equity securities

US Dollar million	Dec 2018 Reviewed				Dec 2017 Audited			
	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total
Other equity securities					80	—	—	80
Other equity securities FVTPL	19	—	—	19				
Other equity securities FVOCI	69	—	—	69				

Environmental obligations

Pursuant to environmental regulations in the countries in which we operate, we are obligated to close our operations and rehabilitate the lands which we mine in accordance with these regulations. As a consequence, AngloGold Ashanti is required in some circumstances to provide either reclamation bonds issued by third party entities, establish independent trust funds or provide guarantees issued by the operation, to the respective environmental protection agency or such other government department with responsibility for environmental oversight in the respective country to cover the potential environmental rehabilitation obligation in specified amounts.

In most cases, the environmental obligations will expire on completion of the rehabilitation although in some cases we are required to potentially post bonds for events unknown that may arise after the rehabilitation has been completed.

In South Africa we have established a trust fund which has assets of ZAR 1.077bn and guarantees of ZAR 0.549bn issued by various banks, for a current carrying value of the liability of ZAR 0.796bn. In Australia, since 2014, we have paid into a Mine Rehabilitation Fund an amount of AUD \$5.5m for a current carrying value of the liability of AUD \$125.5m. At Iduapriem we have provided a bond comprising of a cash component of \$9.99m with a further bond guarantee amounting to \$36.4m issued by Ecobank Ghana Limited and Barclays Ghana Limited for a current carrying value of the liability of \$42.8m. At Obuasi we have provided a bond comprising of a cash component of \$20.6m with a further bank guarantee amounting to \$30.0m issued by Standard Chartered Bank Ghana limited (SCB) and United Bank for Africa Ghana Limited (UBA) for a current carrying value of the liability of \$163.2m. In some circumstances we may be required to post further bonds in due course which will have a consequential income statement charge for the fees charged by the providers of the reclamation bonds.

14 Capital commitments

	As at Dec 2018 Reviewed	As at Dec 2017 Audited
US Dollar million		
Orders placed and outstanding on capital contracts at the prevailing rate of exchange ⁽¹⁾	99	87

⁽¹⁾ Includes the group's attributable share of capital commitments relating to associates and joint ventures.

Liquidity and capital resources

To service the above capital commitments and other operational requirements, the group is dependent on existing cash resources, cash generated from operations and borrowing facilities.

Cash generated from operations is subject to operational, market and other risks. Distributions from operations may be subject to foreign investment, exchange control laws and regulations and the quantity of foreign exchange available in offshore countries. In addition, distributions from joint ventures are subject to the relevant board approval.

The credit facilities and other finance arrangements contain financial covenants and other similar undertakings. To the extent that external borrowings are required, the group's covenant performance indicates that existing financing facilities will be available to meet the above commitments. To the extent that any of the financing facilities mature in the near future, the group believes that sufficient measures are in place to ensure that these facilities can be refinanced.

15 Contractual commitments and contingencies

AngloGold Ashanti's material contingent liabilities at 31 December 2018 and 31 December 2017 are detailed below:

Litigation claims

⁽¹⁾ Litigation - On 11 October 2011, AngloGold Ashanti (Ghana) Limited (AGAG) terminated Mining and Building Contractors Limited's (MBC) underground development agreement, construction on bulkheads agreement and

diamond drilling agreement at Obuasi mine. The parties reached agreement on the terms of the separation and concluded a separation agreement on 8 November 2012. On 20 February 2014, AGAG was served with a demand issued by MBC claiming a total of \$97m. In December 2015, the proceedings were stayed in the High Court pending arbitration. In February 2016, MBC submitted the matter to arbitration. On 12 July 2018, the Ghana Arbitration Centre notified AGAG that MBC had appointed an arbitrator and AGAG subsequently selected its own arbitrator.

Litigation - AGAG received a summons on 2 April 2013 from Abdul Waliyu and 152 others in which the plaintiffs allege that they were or are residents of the Obuasi municipality or its suburbs and that their health has been adversely affected by emission and/or other environmental impacts arising in connection with the current and/or historical operations of the Pompora Treatment Plant (PTP), which was decommissioned in 2000. The plaintiffs' alleged injuries include respiratory infections, skin diseases and certain cancers. The plaintiffs subsequently did not timely file their application for directions, but AGAG intends to allow some time to pass prior to applying to have the matter struck out for want of prosecution. On 24 February 2014, executive members of the PTP (AGAG) Smoke Effect Association (PASEA), sued AGAG by themselves and on behalf of their members (undisclosed number) on grounds similar to those discussed above, as well as economic hardships as a result of constant failure of their crops. This matter has been adjourned indefinitely. AGAG intends to allow some time to pass prior to applying to have the matter struck out for want of prosecution. In view of the limitation of current information for the accurate estimation of a liability, no reliable estimate can be made for AGAG's obligation in either matter.

Litigation - On 19 October 2017, Newmont Mining Co. filed a lawsuit in the United States District Court for the Southern District of New York against AngloGold Ashanti and certain related parties, alleging that AngloGold Ashanti and such parties did not provide Newmont with certain information material to its purchase of the Cripple Creek & Victor Gold Mining Company in 2015 during the negotiation- and-sale process. AngloGold Ashanti believes the lawsuit is without merit and continues to vigorously defend against it. The matter is proceeding. In view of the limitation of current information for the accurate estimation of a liability, no reliable estimate can be made for the obligation.

Tax claims

(4) Tax disputes - AngloGold Ashanti Limited's subsidiaries in Brazil are involved in various disputes with tax authorities. These disputes involve federal tax assessments including income tax, royalties, social contributions, VAT and annual property tax. Collectively, the possible amount involved is approximately \$21m (2017: \$24m). Management is of the opinion that these taxes are not payable.

(5) Tax dispute - In January 2013, AngloGold Ashanti Colombia S.A. (AGAC) received notice from the Colombian Tax Office (DIAN) that it disagreed with the Company's tax treatment of certain items in the 2010 and 2011 income and equity tax returns. On 23 October 2013, AGAC received the official assessments from the DIAN which established that an estimated additional tax of \$20m (2017: \$21m) will be payable if the tax returns are amended. Penalties and interest for the additional taxes may amount to \$115m (2017: \$129m). The Company believes that the DIAN has applied the tax legislation incorrectly. AGAC subsequently challenged the DIAN's ruling by filing lawsuits in March and April 2015 before the Administrative Tribunal of Cundinamarca (the trial court for tax litigation). Closing arguments on the tax disputes were presented in February and June 2017 and judgement is pending. On 23 April 2018, the Administrative Tribunal denied AGAC's arguments with respect to the 2011 income tax litigation. AGAC subsequently appealed this judgement to the Colombian Supreme Court. A final judgement could take several years. In addition, in January 2018 AGAC received notice from the DIAN that it also disagreed with AGAC's 2013 income and equity tax returns on the same basis as the 2010 and 2011 returns, calculating an additional tax of \$32m, along with penalties and interest of \$13m. On 21 December 2018, AGAC filed an appeal before the Administrative Tribunal in respect of the 2013 year of assessment.

Other

(6) Groundwater pollution - AngloGold Ashanti has identified groundwater contamination plumes at certain of its operations, which have occurred primarily as a result of seepage from mine residue stockpiles. Numerous scientific, technical and legal studies have been undertaken to assist in determining the magnitude of the contamination and to find sustainable remediation solutions. The group has instituted processes to reduce future potential seepage and it has been demonstrated that Monitored Natural Attenuation (MNA) by the existing environment will contribute to improvements in some instances. Furthermore, literature reviews, field trials and base line modelling techniques suggest, but have not yet proven, that the use of phyto-technologies can address the soil and groundwater contamination. Subject to the completion of trials and the technology being a proven remediation technique, no reliable estimate can be made for the obligation.

(7) Deep groundwater pollution - The group has identified potential water ingress and future pollution risk posed by deep groundwater in certain underground mines in Africa. Various studies have been undertaken by AngloGold Ashanti since 1999 to understand this potential risk. In South Africa, due to the interconnected nature of mining operations, any proposed solution needs to be a combined one supported by all the mines located in these gold fields. As a result, the Mineral and Petroleum Resources Development Act (MPRDA) requires that the affected mining companies develop a Regional Mine Closure Strategy to be approved by the Department of Mineral Resources. In view of the limitation of current information for the accurate estimation of a liability, no reliable estimate can be made for the obligation

16 New and amended standards adopted by the group

AngloGold Ashanti adopted IFRS 15 Revenue from Contracts with Customers (IFRS 15), IFRS 9 Financial Instruments (IFRS 9) and, early adopted, IFRIC23 Uncertainty over Income Tax Treatments on 1 January 2018.

The new or amended standards became applicable for the current reporting period and the group has changed its accounting policies and made retrospective adjustments as a result of adopting the standards.

The impact of the adoption of these standards and the new accounting policies are disclosed below.

Impact of adoption - IFRS 15 Revenue from Contracts with Customers

The adoption of IFRS 15 has resulted in the reclassification of by-product revenue in Revenue from product sales where previously by-product revenue was recorded as a credit to cost of sales. Revenue from product sales includes gold income and by-product revenue. This change in classification results in a corresponding increase in costs of sales, and therefore will not have an impact on previously reported gross profit.

US Dollar million	As reported IFRS 15		Restated
	Six months ended Dec 2017	Unaudited	Six months ended Dec 2017
Revenue from product sales (previously gold income)	2,324	74	2,398
Cost of sales	(1,874)	(74)	(1,948)
Gain on non-hedge derivatives and other commodity contracts	9		9
Gross profit	459	—	459

US Dollar million	As reported IFRS 15		Restated
	Year ended Dec 2017	Audited	Year ended Dec 2017
Revenue from product sales (previously gold income)	4,356	154	4,510
Cost of sales	(3,582)	(154)	(3,736)
Gain on non-hedge derivatives and other commodity contracts	10		10
Gross profit	784	—	784

In accordance with the transitional provisions in IFRS 15, AngloGold Ashanti has applied IFRS 15 retrospectively to each prior reporting period presented in accordance with IAS 8 Accounting policies, Changes in Accounting Estimates and Errors.

The revenue accounting policy applicable from 1 January 2018:

Revenue is recognised when control of the goods passes to the customer and the performance obligations of transferring control have been met. The amount of revenue recognised reflects the consideration to which the entity is entitled in exchange for the goods transferred.

Revenue from product sales comprises sales of:

refined gold;
by-products including silver, uranium and sulphuric acid; and
gold bars.

Impact of adoption - IFRS 9 Financial Instruments

IFRS 9 replaces the provisions of IAS 39 that relate to the recognition, classification and measurement of financial assets and financial liabilities, derecognition of financial instruments, impairment of financial assets and hedge accounting.

The adoption of IFRS 9 from 1 January 2018 resulted in changes in accounting policies and adjustments to the amounts recognised in the financial statements. The new accounting policies are set out below. In accordance with the transitional provisions in IFRS 9, comparative figures have not been restated.

The group's financial assets include debt instruments (held to maturity bonds and negotiable certificates of deposit), cash restricted for use and cash and cash equivalents which are subject to the IFRS 9 expected credit loss model as they are carried at amortised cost. The accounting policy for listed equity investments depends on the nature of the listed investment. Listed equity investments which are held to meet rehabilitation liabilities are classified as fair value through profit and loss (FVTPL) to eliminate accounting mismatch. Listed equity investments held for other purposes are classified as fair value through other comprehensive income (FVTOCI). Financial liabilities are carried at amortised cost and there is no change in their recognition or presentation under IFRS 9. The adoption of IFRS 9 did not have a significant impact on total assets, total liabilities or the results of the group.

Preliminary Condensed
Financial Information for the
year ended 31 December 2018

-

www.AngloGoldAshanti.com

Equity investments held in the Environmental Trust funds, previously classified as available for sale investments and measured at FVTOCI have been reclassified to FVTPL on initial adoption of IFRS 9. Equity investments held for strategic purposes are measured at FVTOCI with no recycling of profits or losses on disposal of the investments.

On 1 January 2018 management classified its financial instruments into the appropriate IFRS 9 categories.

Upon adoption of IFRS 9, available for sale reserve of \$43m was transferred to the FVTOCI reserve - \$33m and to accumulated losses - \$10m in respect of equity investments at FVTOCI and FVTPL respectively. Refer statement of changes in equity for reclassifications.

The Financial Instruments accounting policy applicable from 1 January 2018:

Financial instruments are initially recognised at fair value when the group becomes a party to their contractual arrangements. Transaction costs directly attributable to the instrument's acquisition or issue are included in the initial measurement of financial assets and financial liabilities, except financial instruments classified as at fair value through profit or loss (FVTPL). The subsequent measurement of financial instruments is dealt with below.

Financial liabilities

Financial liabilities are classified as measured at amortised cost.

A financial liability is derecognised when the obligation under the liability is discharged, cancelled or expires. The group also derecognises a financial liability when its terms are modified and the cash flows of the modified liability are substantially different. In this case a new financial liability based on the modified terms is recognised at fair value.

Financial assets

On initial recognition, a financial asset is classified as measured at:

• amortised cost;

• Fair value through other comprehensive income (FVTOCI) - equity instruments; or

• FVTPL.

At initial recognition, the group measures a financial asset at its fair value plus, in the case of a financial asset not at FVTPL, transaction costs that are directly attributable to the acquisition of the financial asset. Transaction costs of financial assets carried at FVTPL, are expensed.

A financial asset is measured at amortised cost if it is held within the business model whose objective is to hold assets to collect contractual cash flows and its contractual terms give rise, on specified dates, to cash flows that are solely payments of principal and interest on the principal amount outstanding. Interest income from these financial assets is included in finance income using the effective interest rate method. Any gain or loss arising on derecognition is recognised directly in profit or loss and presented in other gains or losses, together with foreign exchange gains or losses. Impairment losses are presented as separate line item in the statement of profit or loss. A gain or loss on a debt investment that is subsequently measured at FVPL is recognised in profit or loss and presented net within other gains or losses in the period in which it arises. On derecognition of a financial asset, the difference between the proceeds received or receivable and the carrying amount of the asset is included in profit or loss.

Equity instruments

Listed equity investments which are held to meet rehabilitation liabilities are classified as FVTPL. Listed equity investments held for other purposes are classified as FVTOCI.

The group subsequently measures all equity investments at fair value. Where the group's management has elected to present fair value gains and losses on equity investments in OCI, there is no subsequent reclassification of fair value gains and losses to profit or loss following the derecognition of the investment. Dividends from such investments continue to be recognised in profit or loss as other income when the group's right to receive payments is established. Residual values in OCI are reclassified to retained earnings (accumulated losses) on derecognition of the related FVTOCI instruments. Changes in the fair value of financial assets at FVTPL are recognised in other gains or losses in the statement of profit or loss as applicable.

Impairment of financial assets

Financial assets at amortised cost consist of trade receivables, loans, cash and cash equivalents and debt instruments. Impairment losses are assessed using the forward-looking expected credit loss (ECL) approach. An allowance is recorded for all loans and other debt financial assets not held at FVTPL. The impairment methodology applied depends on whether there has been a significant increase in credit risk. Trade receivable loss allowances are measured at an amount equal to lifetime ECL's. Loss allowances are deducted from the gross carrying amount of the assets. Debt securities that are determined to have a low credit risk at the reporting date and bank balances, for which credit risk has not increased significantly since initial recognition, are measured at an amount equal to 12-month ECL.

Impact of adoption - IFRIC 23 Uncertainty over Income Tax Treatments

The group early adopted IFRIC 23 which is applicable for annual reporting periods beginning on or after 1 January 2019 with earlier application permitted. No changes in estimates and judgements were made as a result of the adoption of IFRIC 23.

Impact of IFRS 16 Leases issued but not yet adopted

Management is in the process of completing its assessment of the accounting impact and required disclosures arising out of the adoption of this standard. IFRS 16 requires lessees to recognise right-of-use assets and lease liabilities arising from lease contracts with additional disclosures about leasing arrangements. Leases within the scope of IFRS 16 will result in increases in assets and liabilities. We expect an increase in the group's depreciation expense and an increase in cash flows from operating activities as the lease payments will be recorded as financing outflows in our cash flow statement. Management has determined that certain mining, drilling and power generation contracts which are not classified as finance leases under the current accounting standards (IAS 17 and IFRIC 4), will have the most impact on the group's results on adoption of IFRS 16. The adoption of the new standard will result in the recognition of additional right-of-use assets and lease liabilities on 1 January 2019. AGA has elected to transition to IFRS 16 retrospectively with the cumulative effect of initially applying the Standard recognised at the date of initial application. AGA will not restate comparative information. Instead, the cumulative effect of initially applying IFRS 16 will be recognised by adjusting the opening balance of retained earnings at the date of initial application. The adoption of IFRS 16 will not impact AGA's current debt covenant arrangements with financial institutions.

17 Dividends

The directors of AngloGold Ashanti Limited (Registration Number 1944/017354/06) declared Dividend No.120 for the year ended 31 December 2018 as detailed below. In terms of the withholding tax on dividends which became effective on 1 April 2012, the following additional information is disclosed:

18 Recent Developments

On 14 February 2019, AngloGold Ashanti sold its holding in Société d'Exploitation des Mines d'Or de Yatela (Yatela) to the Government of Mali, for a consideration of \$1. As part of the transaction, a one-time payment will be made to the Government of Mali in an amount corresponding to the estimated costs of completing the rehabilitation and closure of the Yatela site, and also financing certain outstanding social programmes. Upon completion and this payment being made, AngloGold Ashanti will be released of all obligations relating to the Yatela project. At 31 December 2018, the estimated attributable costs relating to rehabilitation, mine closure and the financing of social

programmes amounted to \$19.7m.

19 Announcements

Changes to Board of Directors - In compliance with paragraph 3.59 of the Listings Requirements of the JSE Limited, AngloGold Ashanti announced on 22 August 2018, the appointment of Alan Ferguson and Jochen Tilk as independent non-executive directors to its Board of Directors, with effect from 1 October 2018 and 1 January 2019, respectively.

Three-year deal on SA wages and new shift arrangement - On 17 September 2018, AngloGold Ashanti reached agreement in South Africa on wage increases for the next three years, as well as a new shift arrangement with trade unions representing the majority of its employees in South Africa. The deal is another step in an important process to improve pay for its employees - particularly those at entry level - while providing certainty as it works to return its business in the country to profitability.

Obuasi mining contract - On 29 October 2018, AngloGold Ashanti announced the finalisation of a five-year underground mining contract at the Obuasi Re-Development Project with Underground Mining Alliance Limited (UMA), a joint venture between African Underground Mining Services (AUMS) and Accra-based Rocksure International, a wholly-owned Ghanaian mining contractor (Rocksure).

Update to the ZAR 10,000,000,000 Domestic Medium Term Note Programme - On 10 December 2018, AngloGold Ashanti received approval from the JSE in terms of its amended ZAR 10,000,000,000 Domestic Medium Term Note Programme in order to cater for amendments to the JSE Debt Listings Requirements and to effect various other changes.

Non-GAAP disclosure

From time to time AngloGold Ashanti Limited may publicly disclose certain "Non-GAAP" financial measures in the course of its financial presentations, earnings releases, earnings conference calls and otherwise. Set out below are measures extracted from financial information regularly presented to the Chief Operating Decision Maker (the Chief Executive Officer and the Executive Committee).

The group uses certain Non-GAAP performance measures and ratios in managing the business and may provide users of this financial information with additional meaningful comparisons between current results and results in prior operating periods. The Non-GAAP financial measures are used to adjust for fair value movements on the convertible bonds as well as the highly volatile marked-to-market movements on unrealised non-hedge derivatives and other commodity contracts, which can only be measured with certainty on settlement of the contracts. Non-GAAP financial measures should be viewed in addition to, and not as an alternative to, the reported operating results or any other measure of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures that other companies use.

Forward-looking statements

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices, production, total cash costs, all-in sustaining costs, all-in costs, cost savings and other operating results, productivity improvements, growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the achievement of project milestones, commencement and completion of commercial operations of certain of AngloGold Ashanti's exploration and production projects and the completion of acquisitions, dispositions or joint venture transactions, AngloGold Ashanti's liquidity and capital resources and capital expenditures and the outcome and consequence of any potential or pending litigation or regulatory proceedings or environmental health and safety issues, are forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition. These forward-looking statements or forecasts involve known and unknown risks, uncertainties and other factors that may cause AngloGold Ashanti's actual results, performance or achievements to differ materially from the anticipated results, performance or achievements expressed or implied in these forward-looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic, social and political and market conditions, the success of business and operating initiatives, changes in the regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, and business and operational risk management. For a discussion of such risk factors, refer to AngloGold Ashanti's annual reports on Form 20-F filed with the United States Securities and Exchange Commission. These factors are not necessarily all of the important factors that could cause AngloGold Ashanti's actual results to differ materially from those expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on

future results. Consequently, readers are cautioned not to place undue reliance on forward-looking statements. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

Non-GAAP financial measures

This communication may contain certain “Non-GAAP” financial measures. AngloGold Ashanti utilises certain Non-GAAP performance measures and ratios in managing its business. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measures of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies may use.
