## The Fund

The Swiss Helvetia Fund, Inc. is a non-diversified, closed-end investment company whose objective is to seek long-term capital appreciation through investment in equity and equity-linked securities of Swiss companies. The Fund, listed on the New York Stock Exchange under the symbol "SWZ," is managed by Hottinger Capital Corp.

Net Asset Value is calculated daily by 6:00 P.M. (Eastern Standard Time). The most recent calculation is available by calling 1-888-SWISS-00 or by accessing our Website. Weekly Net Asset Value is also published in Barron's, the Monday edition of The Wall Street Journal and the Sunday edition of The New York Times.

## Letter to Stockholders

### Economic Developments

The most prominent development in the first quarter of 2001 was the U.S. Federal Reserve's ("Fed") decision to cut interest rates three times for a total of 150 basis points. This action was in response to a very abrupt deterioration in economic conditions in the U.S., including a decline in consumer confidence numbers. Despite the favorable monetary conditions engineered by the Fed, both the Manufacturing and the Technology sectors continued to deteriorate. The Fed confirmed what we mentioned in our last annual report -- that significant over-capacity was present in the U.S. economy and that it would take some time to absorb it. This situation has led to a low utilization of assets and to a deflationary adjustment in the pricing of goods in order to facilitate inventory reductions. In the face of diminishing profitability, corporations put their investment programs on hold, reduced their production output and began rapid cost cutting efforts, which included layoffs. The situation was very similar in Europe. However, deflation of financial assets compounded by the heavy load of the telecom debt has not yet materialized in a sharp economic slowdown.

### The Swiss Economy

The Swiss National Bank ("SNB"), unlike the European Central Bank, made a move to reduce short-term rates. It cut its proposed trading range for the benchmark 3 month LIBOR (London Inter Bank Offered Rate) by 25 basis points to 2.75%-3.75%. The SNB explained that economic uncertainty had risen and that the economic slowdown would probably be steeper than had been anticipated. The SNB had projected an annual GDP growth of 2.2% for 2001. On the other side, inflation has remained below 2% so far this year and the risk of it spiraling above that level was seen as being very low.

The state of the Swiss economy is still looking healthy with domestic demand fairly strong and exports increasing by 2.1% in volume in February, following an increase of 13.5% in January. Business surveys showed good figures for January, confirming that the slowdown in industry did not accelerate late last year or in the beginning of this year. Industrial output moderated in the last quarter of 2000 (5% growth compared to 7.7% growth in the third quarter of 2000). The producer price index recorded a drop of 0.2% in February, month-over-month, and an

#### Letter to Stockholders (continued)

increase of 0.6% in year-over-year terms. The impact of lower import prices, due to a drop in oil prices, was evident. However, even without the oil effect, import price inflation fell from 2.7% in January, year-over-year, to 1.1% in February.

Indicators for new orders and industrial production were weaker in February. Nonetheless, the leading economic indicators point toward a moderate rather than an abrupt slowdown in the economy. The inverted yield curve indicates a reduction in GDP growth but the spread between long term and money market interest rates, although negative, is still narrow.

#### Currency

The price of the Swiss franc in euros was very stable in spite of the recent slight divergence in monetary policy between the SNB and the European Central Bank. The value of the Swiss franc in U.S. dollar terms declined about 8% despite the sharp slowdown in the U.S. economy and the reduction of the differential in short term rates in favor of the Swiss currency. Market expectations could be that the U.S. economy will recover sooner rather than later or that real GDP growth will be higher in the U.S. than in Europe and Switzerland. The main reason for this scenario would be that the European Central Bank in maintaining a high level of interest rates could, down the road, create deflation and imperil economic growth. So, even though the European Central Bank is trying to prop up the euro, the net result so far is a weakening of the currency.

Management believes that it is the weakness of the euro that is giving the U.S. dollar its strength during this time of economic slowdown in the U.S. As the economy slows down we can expect a reduction in productivity, making the U.S. economy somewhat less competitive, which would reflect in a downward adjustment of the U.S. dollar.

#### The Swiss Stock Market in Review

The first quarter of 2001 was very difficult for equity investing in almost all the major markets. The Swiss market was one of the weaker performers in Europe, after a very strong year 2000, with a decline of 11.90% in local currency and 17.72% in U.S. dollars terms. One of the main drivers of the

## Edgar Filing: SWISS HELVETIA FUND INC - Form N-30D

pressure on the Swiss Performance Index ("SPI") was

THE SWISS HELVETIA FUND, INC.

-----  
 Letter to Stockholders (continued)

the asset allocation shift sparked by the reduction in interest rates in the United States. With lower interest rates, equity risk premiums are heading down and risk tolerance is increasing. Defensive stocks, entering the year with higher than historical valuation premiums compared to the rest of the market, have been the target of significant sell-offs. The so-called value stocks, which tend to be more cyclical in nature, have benefited from recent inflows of funds. This has had a significant impact on the SPI, which is composed mainly of defensive stocks, with healthcare and the insurance stocks affected the most. On the other hand, bank stocks benefited from an expectation of lower interest rates and more liquid capital markets.

Large caps performed the worst during the first quarter as indicated in the graph above due to their defensive nature. The performance of mid and small cap stocks is more difficult to grasp. Management mentioned in the 2000 annual report that trading volume in this segment of the market is often very erratic due to the impact of large international portfolios and, especially, growth oriented portfolios, as they trade in and out of these sectors. This has been the case in the first quarter of 2001. The international investor was much less active, therefore trading volume has dropped dramatically. A much lower percentage of market capitalizations have been changing hands during the first quarter, leading to wild swings in prices. "Growth" stocks in the Medical-Technology, High Tech, and Asset Management sectors were the most affected due to the perceived

Letter to Stockholders (continued)

larger down side risk for their earnings in a slowing economic environment. The more numerous regional mid caps with domestic shareholder bases have not been affected to the same extent. This has helped the SPI Mid and Small Cap indices to outperform the SPI.

The Swiss Helvetia Fund was penalized by its exposure to the large cap defensive sector on one side and to the mid cap growth sector on the other. This happened despite the fact that Management did some portfolio re-balancing to take into account the change in the economic environment induced by the Fed's rate cuts. The portfolio changes increased diversification in the Fund.

2000 earnings and management comments on the 2001 outlook were somewhat of a mixed bag. Among the large caps, several sizable disappointments have been registered, especially by Zurich Financial Services, ABB and Roche. The guidance given for 2001 has been very cautious as well for those companies. On the other side Novartis, UBS, Credit Suisse and Nestle have posted upside surprises. In the mid cap segment the bad news came from Sairgroup, Gretag Imaging, Mikron (where the Fund does not have any exposure), Swisslog and Vontobel.

Corporate Actions

Nestle agreed to buy Ralston Purina, the U.S. pet foods producer for \$10.3

## Edgar Filing: SWISS HELVETIA FUND INC - Form N-30D

billion in order to reinforce its higher growing business area and to set itself up to become the world's biggest player in the estimated \$25 billion a year pet foods business. ABB, in addition to a reorganization of its operating structure into end market business as opposed to a product orientation, has announced a buy back of up to six million shares representing 2% of its capital.

### Swiss Market Perspectives

Very positive news for shareholders in Swiss companies was a change in legislation that took place during the quarter, allowing companies to reduce the minimal nominal value of their shares to one cent, i.e. one rappen or 1/100 of one franc. That will lead to smaller trading units, making stocks more attractive to smaller investors and potentially enlarging the base of interest. Many companies have already announced stock splits. Among them Novartis (40 for one) and UBS (3 for one).

Letter to Stockholders (continued)

According to Management's earnings expectations, the Swiss market currently trades at a price earnings multiple of 19 times 2000 earnings and 17 times forecasted 2001 earnings. Even if the market should register no earnings growth in 2001, its current valuation bears an equity risk premium of 2%. Despite the very difficult macro economic conditions, this should provide downside protection to the market and allow it to rebound as the global economy ceases to deteriorate. The problem the financial markets have to deal with is misallocation of capital during the year 1999 and early 2000, and a high level

## Edgar Filing: SWISS HELVETIA FUND INC - Form N-30D

of debt on the corporate and consumer side.

The strategy of the Fund has been to be more neutral in terms of sector weightings (due to economic uncertainty) and to focus on a stock picking approach, with priority given to "value" and "under valued growth" stocks. Management prefers this investment stance to a sector rotation strategy that might offer more immediate gratification but would also expose the Fund to higher volatility.

The main criteria for the Fund's stock selection approach is the creation of sustainable shareholder value. Companies with a comprehensive long term strategy, with visionary management with a good track record in good and bad economic conditions, and which are active in expanding addressable markets, are the ones Management concentrates its research efforts on.

### Market Outlook

#### U.S.

The need to de-leverage the U.S. economy (to restore the balance sheets of corporations and to reduce consumer debt) will delay the positive impact of the Fed rate cuts and put pressure on corporate and consumer spending. The Fed funds rate is still high, especially looking at the very low potential for increased inflation. Further cuts are therefore expected.

#### Europe

On the positive side, the continent did not have the same over-investment in Technology as in the U.S., and fewer households have equity investments. Euroland appears to be a big closed economy (exports being equal to only 15% of GDP) and tax cuts have already been implemented.

On the negative side, if a major slowdown in world trade is in the works, (slower U.S. activity, weakening Taiwanese and Korean exports, and continuing weakness in Japan), Europe will be affected, especially European corporations, since a large number of them recently purchased U.S. assets. For the stock markets the major risk is complacency in terms of earnings expectations. Some estimates for European companies still appear on the high side.

6

THE SWISS HELVETIA FUND, INC.
