GREENVILLE FIRST BANCSHARES AND SUBSIDIARY
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1 - Nature of Business and Basis of Presentation

Business activity and organization

Greenville First Bancshares, Inc. (the "company") is a South Carolina corporation organized for the purpose of owning and controlling all of the capital stock of Greenville First Bank, N.A., (the "bank"). The bank is a national bank organized under the laws of the United States located in Greenville County, South Carolina. The bank began operations on January 10 , 2000 .

Until January 10, 2000, the company engaged in organizational and pre-opening activities necessary to obtain regulatory approvals and to prepare its subsidiary, the bank, to commence business as a financial institution. The bank is primarily engaged in the business of accepting demand deposits and savings deposits insured by the Federal Deposit Insurance Corporation, and providing commercial, consumer and mortgage loans to the general public.

Basis of Presentation

The accompanying financial statements have been prepared in accordance with generally accepted accounting principles for interim financial information and with the instructions to Form 10-QSB. Accordingly, they do not include all the information and footnotes required by generally accepted accounting principles for complete financial statements. In the opinion of management, all adjustments (consisting of normal recurring accruals) considered necessary for a fair presentation have been included. Operating results for the six-month period ended June 30,2002 are not necessarily indicative of the results that may be expected for the year ending December 31, 2002. For further information, refer to the consolidated financial statements and footnotes thereto included in the company's Form 10-KSB (Registration Number 333-83851) as filed with and declared effective by the Securities and Exchange Commission.

Cash and Cash Equivalents

For purposes of the Consolidated statement of Cash Flows, cash and federal funds sold are included in "cash and cash equivalents". These assets have contractual maturities of less than three months.

Note 2 - Long-term Note Payable

At June 30, 2002 the Company had a $\$ 1.5$ million revolving line of credit with another bank with a maturity of May 17, 2004. At June 30, 2002 the company had outstanding $\$ 1.0$ million. The Company used $\$ 875,000$ of the proceeds to increase its investment in the Bank. The remaining $\$ 125,000$ was used to establish a $\$ 125,000$ escrow fund to be used to pay interest payments. The line of credit bears interest at a rate of prime minus $1.25 \%$, which at June 30,2002 was $3.50 \%$. The Company has pledged the stock of the Bank as collateral for this line of credit. The line of credit agreement contains various covenants related to earnings and asset quality. As of June 30, 2002 the Company was in compliance with all covenants.

Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB

Note 3 - Earnings per Share

The following schedule reconciles the numerators and denominators of the basic and diluted earnings per share computations for the three months and six months ended June 30, 2002. Dilutive common shares arise from the potentially dilutive effect of Greenville Bancshares, Inc.'s stock options and warrants that are outstanding. The assumed conversion of stock options and warrants can create a difference between basic and dilutive net income per common share. As a result of the losses for the three months and six months ended June 30, 2001, all stock options and warrants were considered to be anti-dilutive. Therefore, the weighted average number of common shares outstanding for both basic and diluted net loss per common share for the three months and six months ended June 30,2001 are the same.
Three Month Ended
June 30, 2002

| Basic Earnings Per Share | $1,150,000$ |
| :--- | ---: |
| Average common shares | $\$ 121,126$ |
| Net income | $\$ .11$ |
| Earnings per share |  |
| Diluted Earnings Per Share | $1,150,000$ |
| Average common shares outstanding | 12,398 |
| Average dilutive common shares | $---------1,162,398$ |
| Adjusted average common shares | $\$ 121,126$ |
| Net income | $\$ .10$ |

Item 2. Management's Discussion and Analysis or Plan of Operation.

## DISCUSSION OF FORWARD-LOOKING STATEMENTS

The following is our discussion and analysis of certain significant factors that have affected our financial position and operating results and those of our subsidiary, Greenville First Bank, N.A., during the periods included in the accompanying financial statements. This commentary should be read in conjunction with the financial statements and the related notes and the other statistical information included in this report.

This report contains "forward-looking statements" relating to, without

# Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB 

limitation, future economic performance, plans and objectives of management for future operations, and projections of revenues and other financial items that are based on the beliefs of management, as well as assumptions made by and information currently available to management. The words "may," "will," "anticipate," "should," "would," "believe," "contemplate," "expect," "estimate," "continue," "may," and "intend," as well as other similar words and expressions of the future, are intended to identify forward-looking statements. Our actual results may differ materially from the results discussed in the forward-looking statements, and our operating performance each quarter is subject to various risks and uncertainties that are discussed in detail in our filings with the Securities and Exchange Commission, including, without limitation:

- the effects of future economic conditions;
- governmental monetary and fiscal policies, as well as legislative and regulatory changes;
- changes in interest rates and their effect on the level and composition of deposits, loan demand, and the values of loan collateral, securities and other interest-sensitive assets and liabilities;
- our ability to control costs, expenses, and loan delinquency rates; and
- the effects of competition from other commercial banks, thrifts, mortgage banking firms, consumer finance companies, credit unions, securities brokerage firms, insurance companies, money market and other mutual funds and other financial institutions operating in our market area and elsewhere, including institutions operating regionally, nationally, and internationally, together with such competitors offering banking products and services by mail, telephone, computer and the Internet.

## CRITICAL ACCOUNTING POLICIES

We have adopted various accounting policies that govern the application of accounting principles generally accepted in the United States in the preparation of our financial statements. Our significant accounting policies are described in the footnotes to the consolidated financial statements at December 31, 2001 as filed on our annual report on Form 10-KSB.

Certain accounting policies involve significant judgments and assumptions by us that have a material impact on the carrying value of certain assets and liabilities. We consider these accounting policies to be critical accounting policies. The judgment and assumptions we use are based on historical experience and other factors, which we believe to be reasonable under the circumstances. Because of the nature of the judgment and assumptions we make, actual results could differ from these judgments and estimates that could have a material impact on our carrying values of assets and liabilities and our results of operations.

We believe the allowance for loan losses is a critical accounting policy that requires the most significant judgment and estimates used in preparation of our consolidated financial statements. Refer to the portion of this discussion that addresses our allowance for loan losses for a description of our processes and methodology for determining our allowance for loan losses.

GENERAL

The following is a discussion of our financial condition as of June 30, 2002 and the results of operations for the three months and six months ended

# Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB 

June 30 , 2002. These comments should be read in conjunction with our consolidated financial statements and accompanying consolidated footnotes appearing in this report. The significant accounting policies are described throughout the Management's discussion section of this document

## NATIONAL AND ECONOMIC EVENTS

Nationally, during most of 2001 and the first three months of 2002 , the United States experienced a slowing economy following a tenth year of expansion. During this period, the economy was also affected by lower returns and expectations of the stock markets. Economic data led the Federal Reserve to begin an aggressive program of rate cutting, which moved the Federal Funds rate down 11 times during 2001 for a total reduction of 475 basis points, bringing the Federal Funds rate to its lowest level in 40 years. During the first two quarters of 2002 , the Federal Reserve did not adjust the Federal Funds rate.

Despite sharply lower short-term rates, stimulus to the economy has been muted because the yield curve has steepened and consumer demand and business investment activity has been weak. The financial markets are operating now under very low historical interest rates. Under these unusual conditions, many observers expect Congress to pass an economic stimulus plan. The Federal Reserve has taken a neutral position related to future interest rate changes. Many economists believe the Federal Reserve will begin increasing interest rate in the first half of the 2003 year. No assurance can be given that the Federal Reserve will take such action. We continue to believe that the markets we serve generally perform better than national markets, even in times of recession.

We believe that the economic impact of the terrorist attacks of September 11, 2001 did not materially affect our operations. It is evident from recent economic data that the U.S. economy was affected significantly by these events. The extent and duration of the economic impact from the attacks are not predictable but could affect consumer confidence and the financial activities of retail and business customers. Prior to these events, many economists were predicting that the U.S. had been in a recession. Official economic data released in November 2001 confirms that the U.S. has been in a recession for several months and it is likely that recovery will not occur until sometime later in 2002 or beyond.

## INCOME STATEMENT REVIEW

Comparison of the three months ended June 30, 2002 and the three months ended June 30, 2001.

Net Interest Income

Net interest income, the largest component of our income, was $\$ 1,052,100$ for the three months ended June 30,2002 compared to $\$ 678,033$ for the same period in 2001, or an increase of $55.2 \%$. The level of net interest income is determined by the balances of earning assets and the managing of the net interest margin. Changes in interest rates paid on assets and liabilities, the rate of growth of the asset and liability base, the ratio of interest-earning assets to interest-bearing liabilities, and management of the balance sheet's interest rate sensitivity all factor into changes in net interest income.

Interest income for the second quarter of 2002 was $\$ 1,936,720$ and consisted of $\$ 1,734,959$ on loans, $\$ 188,250$ in investments and $\$ 13,511$ on federal funds sold. Interest income for the same period in 2001 was $\$ 1,512,779$ and included $\$ 1,214,829$ on loans, $\$ 243,373$ on investments and $\$ 54,577$ on federal funds sold.

# Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB 

Interest expense for the second quarter of 2002 was $\$ 884,620$ and consisted of $\$ 841,523$ related to deposits and $\$ 43,097$ related to borrowings. Our interest expense of $\$ 834,746$ during the second quarter of 2001 related solely to deposits. Our interest expense increased $\$ 49,874$, or $6.0 \%$ while our average deposits and borrowings increased from $\$ 56.1$ million for the quarter ended June 30, 2001 to $\$ 127.1$ million for the quarter ended June 30,2002 , an increase of 79.1\%. The increase in our interest expense was proportionately less than the increase in our deposits and borrowings because of the declining interest rate environment.

The following table sets forth, for the three months ended June 30 , 2002 and 2001, information related to our average balance sheet and average yields on assets and average costs of liabilities. We derived these yields by dividing income or expense by the average balance of the corresponding assets or liabilities. We derived average balances from the daily balances throughout the periods indicated.

Average Balances, Income and Expenses, and Rates (in \$000's)

Our net interest spread was $3.04 \%$ for the three months ended June 30, 2002 as compared to $3.10 \%$ for the three months ended June 30, 2001. The net interest spread is the difference between the yield we earn on our interest-earning assets and the rate we pay on our interest-bearing liabilities.

Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB
Our net interest margin for the period ended June 30, 2002 was 3.16\% as compared to $3.50 \%$ for the three months ended June 30, 2001. The net interest margin is calculated as net interest income divided by year-to-date average earning assets. Our net interest margin decreased because our assets repriced downward faster than our liabilities.

In pricing deposits, we considered our liquidity needs, the direction and levels of interest rates and local market conditions.

Rate/Volume Analysis
Net interest income can be analyzed in terms of the impact of changing rates and changing volume. The following table sets forth the effect which the varying levels of earning assets and interest-bearing liabilities and the applicable rates have had on changes in net interest income for the periods presented. Changes that are not solely attributable to either volume, rate or rate/volume have been allocated to each category on a prorated basis.

As the above table demonstrates, the change in our net interest income is primarily due to the increase in our assets and liabilities. This increase is partially offset by the decrease in the rates as a result of the significant reduction in market rates over the last twelve months.

## Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB

Included in the results of operations for the quarters ended June 30, 2002 and 2001 is a non-cash expense of $\$ 220,000$ and $\$ 128,000$, respectively, related to the provision for loan losses. The loan loss reserve was $\$ 1,507,111$ at June 30, 2002 and $\$ 1,192,247$ at December 31, 2001. The allowance for loan losses as a percentage of gross loans was 1.22\% at June 30, 2002 and $1.24 \%$ at December 31, 2001. The loan portfolio is periodically reviewed to evaluate the outstanding loans and to measure both the performance of the portfolio and the adequacy of the allowance for loan losses. For information about how we determine the provision for loan losses, please see our discussion under "Provision and Allowance for Loan Losses." For the three months ended June 30, 2002, we reported net charge-offs of $\$ 101,015$. The significant portion of the net charge-off relates to a $\$ 100,000$ write-down on a non-accruing commercial loan with a remaining carrying value of $\$ 410,000$. There were no loans charged off during the three months ended June 30, 2001.

Noninterest Income and Expenses

Noninterest income in the second quarter of 2002 was $\$ 121,814$, an increase of $103 \%$ over noninterest income of $\$ 60,026$ in the second quarter of 2001. This increase was primarily due to the increases in the volume of service charges on deposits, increases in the volume of fees charged on ATM transactions, and additional loan fees received on the origination of mortgage loans that were sold.

We incurred general and administrative expenses of $\$ 832,788$ for the three months ended June 30, 2002 compared to $\$ 669,521$ for the same period in 2001. The $\$ 163,267$ additional general and administrative expenses resulted primarily from the move into our new main office building in 2001 and the additional staff hired during the first six months of 2001 to handle the current and anticipated future growth in both loans and deposits. Salaries and benefits in second quarter 2002 were $\$ 430,024$, or an increase of $\$ 63,206$. Salaries and benefits represented 51.67\% of the total noninterest expense. Salaries and benefits in second quarter 2001 were $\$ 366,818$. All other expenses increased only $\$ 100,061$. This increase relates primarily to $\$ 45,689$ additional cost for outside services, $\$ 16,514$ of added professional fees, and $\$ 15,000$ of additional occupancy expenses. The primary reason for the higher level of outside services is the additional data processing expense associated with the higher level of activity that resulted from the significant increases in both loans and deposits. The significant portion of the increase in professional fees relates to legal fees associated with loan collection efforts. The primary reason for the increase in occupancy cost is that the bank increased the amount of square footage that was being rented in the 2002 period. The significant portion of the remaining increases are related to $\$ 8,215$ additional marketing expense and $\$ 8,347$ of additional insurance expenses.

Comparison of the six months ended June 30, 2002 and the six months ended June 30, 2001.

## Net Interest Income

Net interest income, the largest component of our income, was $\$ 1,996,278$ for the six months ended June 30,2002 compared to $\$ 1,290,071$ for the same period in 2001, or an increase of $54.7 \%$. The level of net interest income is determined by the balances of earning assets and managing of the net interest margin. Changes in interest rates paid on assets and liabilities, the rate of growth of the asset and liability base, the ratio of interest-earning assets to interest-bearing liabilities, and management of the balance sheet's interest rate sensitivity all factor into changes in net interest income.

## Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB

Interest income for the first six months of 2002 was $\$ 3,727,078$ and consisted of $\$ 3,321,614$ on loans, $\$ 369,403$ in investments and $\$ 36,061$ on federal funds sold. Interest income for the same period in 2001 was $\$ 2,925,314$ and included $\$ 2,345,805$ on loans, $\$ 462,747$ on investments and $\$ 116,762$ on federal funds sold.

Interest expense for the first six months of 2002 was $\$ 1,730,800$ and consisted of $\$ 1,611,120$ related to deposits and $\$ 119,680$ related to borrowings. Our interest expense of $\$ 1,635,243$ during the first six months of 2001 related solely to deposits. Our interest expense increased $\$ 95,557$, or $5.8 \%$ while our average deposits and borrowings increased from $\$ 65.5$ million for the six months ended June 30, 2001 to $\$ 121.1$ million for the six months ended June 30, 2002, an increase of $84.8 \%$. The increase in our interest expense was proportionately less than the increase in our deposits and borrowings because of the declining interest rate environment.

The following table sets forth, for the six months ended June 30, 2002 and 2001, information related to our average balance sheet and average yields on assets and average costs of liabilities. We derived these yields by dividing income or expense by the average balance of the corresponding assets or liabilities. We derived average balances from the daily balances throughout the periods indicated.

Average Balances, Income and Expenses, and Rates (in \$000's)

Our net interest spread was $2.98 \%$ for the six months ended June 30, 2002 as compared to $3.02 \%$ for the six months ended June 30,2001 . The net interest spread is the difference between the yield we earn on our interest-earning assets and the rate we pay on our interest-bearing liabilities.

Our net interest margin for the period ended June 30, 2002 was $3.14 \%$ as compared to $3.55 \%$ for the six months ended June 30, 2001. The net interest margin is calculated as net interest income divided by year-to-date average earning assets. Our net interest margin decreased because our assets repriced downward faster than our liabilities.

In pricing deposits, we considered our liquidity needs, the direction and levels of interest rates and local market conditions.

Rate/Volume Analysis
Net interest income can be analyzed in terms of the impact of changing rates and changing volume. The following table sets forth the effect which the varying levels of earning assets and interest-bearing liabilities and the applicable rates have had on changes in net interest income for the periods presented. Changes that are not solely attributable to either volume, rate or rate/volume have been allocated to each category on a prorated basis.
Six months ended June 30,2002
(Dollars in Thousands)

As the above table demonstrates, the change in our net interest income is primarily due to the increase in our assets and liabilities. This increase is partially offset by the decrease in the rates as a result of the significant

# Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB 

reduction in market rates over the last twelve months.

Provision for Loan Losses

Included in the results of operations for the six months ended June 30, 2002 and 2001 is a non-cash expense of $\$ 420,000$ and $\$ 250,000$, respectively, related to the provision for loan losses. The loan loss reserve was $\$ 1,507,111$ at June 30,2002 and $\$ 1,192,247$ at December 31, 2001. The allowance for loan losses as a percentage of gross loans was 1.22\% at June 30, 2002 and $1.24 \%$ at December 31, 2001. The loan portfolio is periodically reviewed to evaluate the outstanding loans and to measure both the performance of the portfolio and the adequacy of the allowance for loan losses. For information about how we determine the provision for loan losses, please see our discussion under "Provision and Allowance for Loan Losses." For the six months ended June 30, 2002, we reported net charge-offs of $\$ 105,136$. The significant portion of the net charge-off relates to a $\$ 100,000$ write-down on a non-accruing commercial loan with a remaining carrying value of $\$ 410,000$. There were no loans charged off during the six months ended June 30, 2001.

## Noninterest Income and Expenses

Noninterest income in the first six months of 2002 was $\$ 224,764$, an increase of $114 \%$ over noninterest income of $\$ 104,879$ in the first six months of 2001. This increase was primarily due to the increases in the volume of service charges on deposits, increases in the volume of fees charged on ATM transactions, and additional loan fees received on the origination of mortgage loans that were sold.

We incurred general and administrative expenses of $\$ 1,637,103$ for the six months ended June 30,2002 compared to $\$ 1,282,648$ for the same period in 2001. The $\$ 354,455$ additional general and administrative expenses resulted primarily from the move into our new main office building in 2001 and the additional staff hired during the first six months of 2001 to handle the current and anticipated future growth in both loans and deposits. Salaries and benefits in first six months were $\$ 861,547$, or an increase of $\$ 167,995$. Salaries and benefits represented 55.6\% of the total noninterest expense. The salary and benefits expense for the second quarter of 2002 was $\$ 1,499$ less than the amount recorded in the first quarter of 2002. Salaries and benefits in first six months of 2001 were $\$ 693,552$. All other expenses increased only $\$ 186,460$. This increase relates primarily to $\$ 95,349$ additional cost for outside services, $\$ 22,506$ of added professional fees, and $\$ 35,831$ of additional occupancy expenses. The primary reason for
the higher level of outside services is the additional data processing expense associated with the higher level of activity that resulted from the significant increases in both loans and deposits. The significant portion of the increase in professional fees relates to legal fees associated with loan collection efforts. The primary reason for the increase in occupancy cost is that the bank increased the amount of square footage that was being rented in the 2002 period. The significant portion of the remaining increases are related to $\$ 10,809$ additional marketing expense and $\$ 16,824$ of additional insurance expenses.

BALANCE SHEET REVIEW

General

At June 30,2002 , we had total assets of $\$ 145.0$ million, consisting
principally of $\$ 122.2$ million in loans, $\$ 16.8$ million in investments and $\$ 3.7$ million in cash and due from banks. Liabilities at June 30, 2002 totaled $\$ 135.3$ million, consisting principally of $\$ 123.7$ million in deposits and $\$ 10.1$ million in FHLB advances and other borrowings. At June 30, 2002, shareholders' equity was $\$ 9.6$ million.

Investments

At June 30, 2002, the $\$ 15.4$ million of investment securities portfolio available for sale represented approximately $10.6 \%$ of our total assets. We were invested in U.S. Government agency securities, mortgage-backed securities and federal funds with a fair value of $\$ 15.6$ million and an amortized cost of $\$ 15.2$ for an unrealized gain of $\$ 212,772$.

Contractual maturities and yields on our investments (all available for sale) at June 30,2002 are shown in the following table (dollars in thousands). Expected maturities may differ from contractual maturities because issuers may have the right to call or prepay obligations with or without call or prepayment penalties. Based on the comparison of investment securities coupon rates and the market interest rate as of June 30, 2002, the bank anticipates that between $\$ 4.0$ million and $\$ 10.0$ million may be called during the twelve months ending June 30 , 2003.

|  | Within one year | Yield | After one but Within five Years |  | Yield | Over <br> Five years |  | Yield |  | tal |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| U.S.Government agencies | --- | --- | \$ | 12,769 | $4.75 \%$ | \$ | 1,658 | $6.05 \%$ | \$ | 14,427 |
| Mortgage-backed securities | -- | --- |  | 6 | $3.96 \%$ |  | 999 | $6.00 \%$ | \$ | 1,005 |
| Total | --- | --- | \$ | 12,775 | $4.75 \%$ | \$ | 2,657 | $6.03 \%$ | \$ | 15,43 |

At June 30,2002 , the $\$ 842,446$ of short-term investments in federal funds sold on an overnight basis comprised. $58 \%$ of total assets at June 30 , 2002, as compared to $\$ 100,841$ or . $1 \%$ of total assets at December 31, 2001.

Loans

Since loans typically provide higher interest yields than do other types of interest earning assets, it is our intent to channel a substantial percentage of our earning assets into the loan portfolio. Average loans for the six months ended June 30,2002 and 2001 were $\$ 109.7$ million and $\$ 55.0$ million, respectively. Total loans outstanding at June 30, 2002 and December 31, 2001 were $\$ 123.7$ million and $\$ 96.5$ million, respectively, before allowance for loan losses.

The following table summarizes the composition of the loan portfolio:

The principal component of our loan portfolio at June 30, 2002 and at December 31, 2001 was loans secured by real estate mortgages. Due to the short time the portfolio has existed, the current mix of loans may not be indicative of the ongoing portfolio mix. Management will attempt to maintain a relatively diversified loan portfolio to help reduce the risk inherent in concentration of collateral.

Provision and Allowance for Loan Losses

We have developed policies and procedures for evaluating the overall quality of our credit portfolio and the timely identification of potential credit problems.

We have established an allowance for loan losses through a provision for loan losses charged to expense on our statement of operations. The allowance represents an amount which we believe will be adequate to absorb probable losses on existing loans that may become uncollectible. Our judgment in determining the adequacy of the allowance is based on evaluations of the collectibility of loans, including consideration of factors such as the balance of impaired loans; the quality, mix and size of our overall loan portfolio; economic conditions that may affect the borrower's ability to repay; the amount and quality of

# Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB 

collateral securing the loans; our historical loan loss experience and a review of specific problem loans. We increase the allowance periodically by additional provisions for loan losses. We charge recognized losses to the allowance and add subsequent recoveries back to the allowance.

Our evaluation is inherently subjective as it requires estimates that are susceptible to significant change. In addition, regulatory agencies periodically review our allowance for loan losses as part of their examination process, and they may require us to record additions to the allowance based on their judgment about information available to them at the time of their examinations. Our losses will undoubtedly vary from our estimates, and there is a possibility that charge-offs in future periods will exceed the allowance for loan losses as estimated at any point in time.

We do not allocate the allowance for loan losses to specific categories of loans but evaluate the adequacy on an overall portfolio basis utilizing our credit grading system which we apply to each loan. We have engaged an independent consultant to review the loan files on a test basis, to verify that the lenders have properly graded each loan. Due to our limited operating history, the provision for loan losses has been made primarily as a result of management's assessment of general loan loss risk as compared to banks of similar size and maturity.

At June 30, 2002 and at December 31, 2001, the allowance for loan losses was $\$ 1.5$ million and $\$ 1.2$ million, respectively, or $1.22 \%$ of outstanding loans at June 30,2002 and $1.24 \%$ at December 31, 2001, respectively. During the six months ended June 30,2002 , we charged off loans of $\$ 105,136$. There were no loans charged off during the six months ended June 30, 2001.

At June 30, 2002, nonaccrual loans represented. $33 \%$ of total loans. We had one commercial business loan of approximately $\$ 410,000$ that was on nonaccrual status. We classified this loan and put it on non-accrual status during the first quarter of 2002. There was only one loan on nonaccrual status at December 31, 2001. During the first quarter of 2002 , the bank obtained ownership through foreclosure procedures on the residental construction loan that was on nonaccrual status at December 31, 2001. At June 30, 2002, the bank carried this asset as real estate owned with a carrying value of approximately $\$ 384,000$. The bank is in the process of completing the construction of this home. The bank carries all real estate acquired through foreclosure at the lower of cost or market value.

Generally, a loan is placed on nonaccrual status when it becomes 90 days past due as to principal or interest, or when management believes, after considering economic and business conditions and collection efforts, that the borrower's financial condition is such that collection of the loan is doubtful.

Maturities and Sensitivity of Loans to Changes in Interest Rates
The information in the following table is based on the contractual maturities of individual loans, including loans which may be subject to renewal at their contractual maturity. Renewal of such loans is subject to review and credit approval, as well as modification of terms upon their maturity. Actual repayments of loans may differ from maturities reflected below because borrowers have the right to prepay obligations with or without prepayment penalties.

The following table summarizes the loan maturity distribution, by type, and related interest rate characteristics at June 30, 2002 (dollars in thousands):

Deposits and Other Interest-Bearing Liabilities
Our primary sources of funds for loans and investments are our deposits, advances from the FHLB, and short-term repurchase agreements. National and local market trends over the past several years suggest that consumers have moved an increasing percentage of discretionary savings funds into investments such as annuities and stock and fixed income mutual funds. We believe that conditions in 2002 were favorable for deposit growth and that factors such as the low returns on investments and mutual funds may have increased traditional deposit inflows during 2002.

The following is a table of deposits by category (dollars in
thousands) :

June 30, 2002
--------------

| Demand deposit accounts | \$ | 8,919 | 7.21\% | \$ | 7,729 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| NOW accounts |  | 21,341 | 17.25\% |  | 8,295 |
| Money market accounts |  | 22,147 | 17.90\% |  | 24,139 |
| Savings accounts |  | 418 | . $34 \%$ |  | 255 |
| Time deposits less than \$100,000 |  | 31,655 | 25.58\% |  | 31,900 |
| Time deposits of $\$ 100,000$ or more |  | 39,265 | 31.72\% |  | 20,382 |
| Total deposits | \$ | 123,745 | 100.00\% | \$ | 92,700 |

Core deposits, which traditionally exclude time deposits of $\$ 100,000$ or more, provide a relatively stable funding source for our loan portfolio and other earning assets. Our core deposits were $\$ 79.7$ million and $\$ 72.3$ million at March 31, 2002 and December 31, 2001, respectively. Our loan-to-deposit ratio was $98.8 \%$ and $102.8 \%$ at June 30,2002 and December 31, 2001, respectively.

The significant portion of the increase in time deposits over $\$ 100,000$ relates to deposits that were obtained outside of our local market. The maturites on these deposits range from three months to five years. These deposits were obtained at rates that were either comparable or lower than rates paid in the local market. The long term CDs were obtained to "lock in" long term funding at low interest rates. The short-term deposits were used to fund a significant increase in loan demand. Generally, we do not plan to renew these short-term deposits.

The maturity distribution of our time deposits of $\$ 100,000$ or more is as follows:
(Dollars in thousands)

Three months or less
Over three through twelve months
Over twelve months

Total
$\$ 10,217 \quad \$ \quad 7,929$
19,225 8,703
9,823 3,750

Borrowings

At June 30, 2002 the bank had $\$ 3.0$ million of advances from the FHLB of Atlanta. These advances are secured with approximately $\$ 9.0$ million of first mortgage loans, investment securities and stock in the FHLB. The advance of $\$ 3.0$ million with a weighted rate of $4.83 \%$ has a maturity of August 24 , 2011. The FHLB has the option to re-price this advance as of August 24, 2006.

At June 30,2002 the bank had $\$ 6.1$ million of repurchase agreements from a brokerage firm. The repurchase agreements are secured with approximately $\$ 6.1$ million of investment securities. The repurchase agreements mature within 90 -days with a weighted average rate of $1.90 \%$.

At June 30, 2002 the Company had a $\$ 1.5$ million revolving line of credit with another bank with a maturity of May 17, 2004 . At June 30, 2002 the company had outstanding $\$ 1.0$ million. The Company used $\$ 875,000$ of the proceeds to increase its investment in the Bank. The remaining $\$ 125,000$ was used to

# Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB 

establish a $\$ 125,000$ escrow fund to be used to pay interest payments. The line of credit bears interest at a rate of prime minus $1.25 \%$, which at June 30,2002 was $3.50 \%$. The Company has pledged the stock of the Bank as collateral for this line of credit. The line of credit agreement contains various covenants related to earnings and asset quality. As of June 30, 2002 the Company was in compliance with all covenants.

At June 30, 2002 the bank had an unused $\$ 2.8$ million of federal funds line of credit. This line of credit is unsecured and bears interest at the daily rate of federal funds plus 25 basis points (2.00\% at June 30, 2002). At June 30, 2002, the bank also had an unused $\$ 4.0$ million line of credit with a brokerage firm, secured by $\$ 4.0$ million of investment securities. This line of credit bears market interest rates based on the maturities of the various repurchase agreements. At June 30,2002 the bank had assets pledged with the FHLB that would allow the bank to obtain $\$ 6.0$ million of additional advances. The rate of the future advances will vary based on current market conditions and the length of the maturity of the advances obtained.

## CAPITAL RESOURCES

Total shareholders' equity amounted to $\$ 9.6$ million at June 30, 2002 and $\$ 9.5$ million at December 31, 2001. The increase during the six months ended June 30,2002 resulted from $\$ 163,939$ of net income and $\$ 11,663$ increase in the unrealized gains on investment securities.

The following table shows the annualized return on average assets ( annualized net income divided by average total assets), return on average equity (annualized net income divided by average equity), and equity to assets ratio (average equity divided by average total assets). Since our inception, we have not paid any cash dividends.

|  | $\begin{gathered} \text { June } 30, \\ 2002 \end{gathered}$ | $\begin{gathered} \text { December } 31 \text {, } \\ 2001 \end{gathered}$ |
| :---: | :---: | :---: |
| Return on average assets | . $25 \%$ | -. $11 \%$ |
| Return on average equity | $3.48 \%$ | -. $83 \%$ |
| Equity to assets ratio | $6.65 \%$ | $12.95 \%$ |

The Federal Reserve Board and bank regulatory agencies require bank holding companies and financial institutions to maintain capital at adequate levels based on a percentage of assets and off-balance sheet exposures, adjusted for risk weights ranging from 0\% to $100 \%$. The Federal Reserve guidelines also contain an exemption from the capital requirements for bank holding companies with less than $\$ 150$ million in consolidated assets. Because we had less than $\$ 150$ million in assets, the company is not currently subject to these guidelines. However, the bank falls under these rules as set per bank regulatory agencies.

Under the capital adequacy guidelines, capital is classified into two tiers. These guidelines require an institution to maintain a certain level of Tier 1 and Tier 2 capital to risk-weighted assets. Tier 1 capital consists of common stockholders' equity, excluding the unrealized gain or loss on securities available for sale, minus certain intangible assets. In determining the amount of risk-weighted assets, all assets, including certain off-balance sheet assets, are multiplied by a risk-weight factor of $0 \%$ to $100 \%$ based on the risks believed
inherent in the type of asset. Tier 2 capital consists of Tier 1 capital plus the general
reserve for loan losses subject to certain limitations. The bank is also required to maintain capital at a minimum level based on total average assets, which is known as the Tier 1 leverage ratio.

The bank is subject to various regulatory capital requirements administered by the federal banking agencies. Under these capital guidelines, we must maintain a minimum total risk-based capital of $8 \%$ with at least $4 \%$ being Tier 1 capital. In addition, we must maintain a minimum Tier 1 leverage ratio of at least 4\%. To be considered "well-capitalized", we must maintain total risk-based capital of at least $10 \%$, Tier 1 capital of at least $6 \%$ and a leverage ratio of at least $5 \%$.

The following table sets forth the company's and the bank's various capital ratios at June 30, 2002 and December 31, 2001. At June 30, 2002 and December 31, 2001, we both were in compliance with each of the applicable regulatory capital requirements and the Bank was considered to be "well capitalized."

|  | June 30, 2002 |  | December 31, 2001 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Company | Bank | Company | Bank |
| Total risk-based capital | 9.5\% | 10.2\% | $10.4 \%$ | 10.1\% |
| Tier 1 risk-based capital | 8. 2 \% | 9.0\% | 9.2\% | 8.9\% |
| Leverage capital | $6.9 \%$ | 7. $5 \%$ | 8. 2 \% | 8. 2 \% |

Our objective is to maintain the capital levels such that the bank will continue to be considered well capitalized. The company has a $\$ 500,000$ unused line of credit with another bank whereby the loan proceeds can be used by the company to increase the bank's capital position. Depending on the timing of when additional capital is obtained, the bank may be required to limit the level of growth that has been experienced in the past two years. As of June 30, 2002, there were no significant firm commitments outstanding for capital expenditures.

## EFFECT OF INFLATION AND CHANGING PRICES

The effect of relative purchasing power over time due to inflation has not been taken into effect in our financial statements. Rather, the statements have been prepared on an historical cost basis in accordance with generally accepted accounting principles in the United States of America.

Unlike most industrial companies, the assets and liabilities of financial institutions such as our company and bank are primarily monetary in nature. Therefore, the effect of changes in interest rates will have a more significant impact on our performance than will the effect of changing prices and inflation in general. In addition, interest rates may generally increase as
the rate of inflation increases, although not necessarily in the same magnitude. As discussed previously, we seek to manage the relationships between interest sensitive assets and liabilities in order to protect against wide rate fluctuations, including those resulting from inflation.

OFF-BALANCE SHEET RISK

Commitments to extend credit are agreements to lend to a customer as long as there is no violation of any material condition established in the contract. Commitments generally have fixed expiration dates or other termination clauses and may require the payment of a fee. At June 30, 2002, unfunded commitments to extend credit were $\$ 29.5$ million, of which approximately $\$ 5.9$ million is at fixed rates and $\$ 23.6$ million is at variable rates. The significant portion of the unfunded commitments relates to
consumer equity lines of credit. The bank anticipates, based on historical experience, that the significant portion of these lines of credit will not be funded. The bank evaluates each customer's credit worthiness on a case-by-case basis. The amount of collateral obtained, if deemed necessary by the bank upon extension of credit, is based on management's credit evaluation of the borrower. Collateral varies but may include accounts receivable, inventory, property, plant and equipment, and commercial and residential real estate.

At June 30, 2002, there was a $\$ 565,000$ commitment under a letter of credit. The credit risk involved in issuing letters of credit is essentially the same as that involved in extending loan facilities to customers. Collateral varies but may include accounts receivable, inventory, equipment, marketable securities and property. Since most of the letters of credit are expected to expire without being drawn upon, they do not necessarily represent future cash requirements.

Except as disclosed in this report, we are not involved in off-balance sheet contractual relationships, unconsolidated related entities that have off-balance sheet arrangements, or transactions that result in liquidity needs or other commitments that we believe are likely to significantly impact earnings.

MARKET RISK

Market risk is the risk of loss from adverse changes in market prices and rates, which principally arises from interest rate risk inherent in our lending, investing, deposit gathering and borrowing activities. Other types of market risks, such as foreign currency exchange rate risk and commodity price risk, do not normally arise in the normal course of our business. We actively monitor and manage our interest rate risk exposure.

The principal interest rate risk monitoring technique we employ is the measurement of our interest sensitivity "gap", which is the positive or negative dollar difference between assets and liabilities that are subject to interest rate repricing within a given period of time. Interest rate sensitivity can be managed by repricing assets or liabilities, selling securities available-for-sale, replacing an asset or liability at maturity, or adjusting the interest rate during the life of an asset or liability. Managing the amount of assets and liabilities repricing in this same time interval helps to hedge the risk and minimize the impact on net interest income of rising or falling interest rates. We generally would benefit from increasing market rates of interest when we have an asset-sensitive gap position and generally would benefit from decreasing market rates of interest when we are liability-sensitive.

# Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB 

Because approximately $75 \%$ of our loans are variable rate loans at June 30, 2002, we are currently asset sensitive over the one-year time frame. However, our gap analysis is not a precise indicator of our interest sensitivity position. The analysis presents only a static view of the timing of maturities and repricing opportunities, without taking into consideration that changes in interest rates do not affect all assets and liabilities equally. For example, rates paid on a substantial portion of core deposits may change contractually within a relatively short time frame, but those rates are viewed by management as significantly less interest-sensitive than market-based rates such as those paid on non-core deposits. Net interest income may be impacted by other significant factors in a given interest rate environment, including changes in the volume and mix of earning assets and interest-bearing liabilities.

## LIQUIDITY \& INTEREST RATE SENSITIVITY

Liquidity management involves monitoring our sources and uses of funds in order to meet our day-to-day cash flow requirements while maximizing profits. Liquidity represents the ability of a company to convert assets into cash or cash equivalents without significant loss and to raise additional funds by increasing liabilities. Liquidity management is made more complicated because different balance sheet components are subject to varying degrees of management control. For example, the timing of maturities of the investment portfolio is fairly predictable and subject to a high degree of control at the time the investment decisions are made. However, net deposit inflows and outflows are far less predictable and are not subject to nearly the same degree of control.

At June 30, 2002 and December 31, 2001, our liquid assets, consisting of cash, due from banks and federal funds sold, amounted to $\$ 4.6$ million and $\$ 3.0$ million, representing $3.2 \%$ and $2.51 \%$ of total assets, respectively. Investment securities at June 30, 2002 and December 31, 2001 amounted to $\$ 16.0$ million and $\$ 18.5$ million, representing $11.03 \%$ and $15.58 \%$ of total assets, respectively; these securities provide a secondary source of liquidity since they can be converted into cash in a timely manner. Our ability to maintain and expand our deposit base and borrowing capabilities also serves as a source of liquidity.

We plan to meet our future cash needs through the liquidation of temporary investments, maturities and sale of loans, maturity of investment securities, and generation of deposits. During the fourth quarter of 2001 , as a result of historically low rates that were being earned on short-term liquidity investments, we chose to maintain a lower than normal level of short-term liquidity securities. During the first quarter of 2002 , the bank increased its net liquidity position by approximately $\$ 22$ million. This resulted primarily from increases in deposits, sales of participations in loan originations, and identification of additional qualifying collateral that was pledged to the FHLB that allows for additional borrowing capacity. During the second quarter of 2002, the bank utilized a portion of the excess liquidity, by using proceeds from the short-term advances from the FHLB and short-term repurchase agreements from brokerage firms to fund the significant portion of the loan production during the second quarter. By utilizing the various short-term sources of funding, the bank was able to reduce its level of interest sensitivity while obtaining low cost funds. The bank is a member of the Federal Home Loan Bank of Atlanta from which applications for borrowings can be made for leverage purposes, if so desired. The FHLB requires securities, qualifying single family mortgage loans, and stock of the FHLB owned by the bank be pledged to secure any advances from the FHLB. The unused borrowing capacity at June 30, 2002 that is

## Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB

currently available from the FHLB based on the amount of collateral pledged is approximately $\$ 6.0$ million. In addition, the bank maintains a federal funds purchased line of credit with a correspondent bank in the amount of $\$ 2.8$ million. The line of credit with the correspondent bank was unused. We have also obtained a $\$ 10.0$ million line of credit that is available from a brokerage firm that holds $\$ 10.0$ million of investment securities as collateral. As of June 30 , 2002, the bank had utilized approximately $\$ 6.1$ million of the brokerage firm's line of credit.

We believe that our existing stable base of core deposits, borrowings from the FHLB, and short-term repurchase agreements will enable us to successfully meet our liquidity needs for the foreseeable future.

Asset/liability management is the process by which we monitor and control the mix and maturities of our assets and liabilities. The essential purposes of asset/liability management are to ensure adequate liquidity and to maintain an appropriate balance between interest sensitive assets and liabilities to minimize potentially adverse impacts on earnings from changes in market interest rates. The bank's asset/liability management committee ("ALCO") monitors and considers methods of managing exposure to interest rate risk. The ALCO consists of members of the board of directors and senior management of the bank and meets at least quarterly. The ALCO is charged with the responsibility to maintain the level of interest rate sensitivity of the bank's interest sensitive assets and liabilities within Board-approved limits.

The following table presents our rate sensitivity at each of the time intervals indicated as of June 30,2002 . The table may not be indicative of our rate sensitivity position at other points in time. In addition, the table's maturity distribution may differ from the contractual maturities of the earning assets and interest bearing liabilities presented due to consideration of prepayment speeds under various interest rate change scenarios in the application of the interest rate sensitivity methods described above.

## ACCOUNTING, REPORTING AND REGULATORY MATTERS

Accounting standards have been issued or proposed by the Financial Accounting Standards Board and are not required to be adopted until a future date, are not expected to have a material impact on the consolidated financial statements upon adoption.

PART II. OTHER INFORMATION

Item 1. Legal Proceedings

There are no material pending legal proceedings to which the Company is a party or of which any of its property is the subject.

Item 2. Changes in Securities

Not applicable

Item 3. Defaults Upon Senior Securities

Not applicable

Item 4. Submission of Matters to a Vote of Security Holders

At the company's annual meeting of shareholders held May 15, 2002, the election of four members of the board of directors as Class III directors for a three-year term was the only matter submitted to a vote of security holders during the six months ended June 30, 2002.

Our board of directors is divided into three classes with each class to be nearly equal in number as possible. The three classes of directors are to have staggered terms, so that the terms of only approximately one-third of the board members will expire at each annual meeting of meeting of shareholders. The current Class I directors are Mark A. Cothran, Rudolph G. Johnsonstone, III, M.D., Keith J. Marrero, and R. Arthur Seaver, Jr. The current Class II directors are Leighton M. Cubbage, David G. Ellison, James B. Orders, and William B. Sturgis. The current Class III directors are Andrew B. Cajka, Anne S. Ellefson, Fred Gilmer, Jr. and Tecumseh Hooper, Jr.

The previous terms of the Class III directors expired at the Annual Meeting. Each of the four current Class III directors was nominated for election

## Edgar Filing: GREENVILLE FIRST BANCSHARES INC - Form 10QSB

and stood for election at the Annual Meeting on May 15, 2002 for a three-year term. The number of votes for the election of the Class II directors were as follows: For Mr. Cajka - 911,887; for Ms. Ellefson - 911,887; for Mr. Gilmer 851,787; and for Mr. Hooper - 911,877. The number of votes against the directors were as follows: Mr. Cajka - 500; Ms. Ellefson - 500; Mr. Gilmer -60,600; and Mr. Hooper -500 . No shareholders voted to abstain.

Since a plurality of the votes were attained for the directors that stood for re-election, the approval of the Class III directors to serve a three-year term, expiring at the 2005 annual meeting of shareholders was recorded in our minute book from the annual meeting of shareholders. There were no other matters voted on by the company's shareholders at our annual meeting held on May 15, 2002.
