The RBS Oil Trendpilot(TM) ETN provides exposure to either the RBS 12-Month Oil Total Return Index (USD) or the yield on 3-month US Treasury bills using a systematic strategy, based on the performance of the RBS 12-Month Oil Total Return Index (USD) relative to its performance on a historical 100-business day simple moving average basis.

The RBS 12-Month Oil Total Return Index (USD) tracks a hypothetical notional investment in a series of twelve light sweet crude oil (WTI) futures contracts that are traded on the NYMEX.

By moving in and out of tracking the RBS 12-Month Oil Total Return Index (USD) using an objective and transparent methodology, the RBS Oil Trendpilot(TM) ETN provides exposure to:

- [] crude oil futures prices in positive trending markets.
- [] 3-month US Treasury bills in negative trending markets.

Unlike commodity ETFs that invest in commodity futures contracts, you will not receive a Schedule K-1 for an investment in the RBS Oil Trendpilot(TM) ETN.
