# UNITED STATES SECURITIES AND EXCHANGE COMMISSION WASHINGTON, D. C. 20549 FORM 10-Q

## **DESCRIPTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the quarterly period ended June 30, 2011

OR

## o TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES AND EXCHANGE ACT OF 1934

## Commission File No. 1-4329 COOPER TIRE & RUBBER COMPANY

(Exact name of registrant as specified in its charter)

**DELAWARE** 

34-4297750

(State or other jurisdiction of incorporation or organization)

(I.R.S. employer identification no.)

701 Lima Avenue, Findlay, Ohio 45840 (Address of principal executive offices)

(Zip code)

(419) 423-1321

(Registrant s telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months, and (2) has been subject to such filing requirements for the past 90 days.

Yes b No o

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes b No o

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of accelerated filer and large accelerated filer in Rule 12b-2 of the Exchange Act. (Check One):

 Non-accelerated filer o

Smaller reporting

(Do not check if a smaller

company o

reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes o No b

Number of shares of common stock of registrant outstanding

at July 31, 2011: 62,257,749

## COOPER TIRE & RUBBER COMPANY NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(Dollar amounts in thousands except per-share amounts)

Organization, Consolidation and Summary of Principal Accounting Policies

1. The accompanying unaudited condensed consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States for interim financial information and with the instructions to Form 10-Q and Article 10 of Regulation S-X. Accordingly, they do not include all of the information and footnotes required by accounting principles generally accepted in the United States for complete financial statements. In the opinion of management, all adjustments (consisting of normal recurring accruals) considered necessary for a fair presentation have been included. There is a year-round demand for the Company s passenger and truck replacement tires, but sales of light vehicle replacement tires are generally strongest during the third and fourth quarters of the year. Winter tires are sold principally during the months of June through November. Operating results for the three-month and six-month periods ended June 30, 2011 are not necessarily indicative of the results that may be expected for the year ended December 31, 2011.

The Company consolidates into its financial statements the accounts of the Company, all wholly-owned subsidiaries, and any partially-owned subsidiary that the Company has the ability to control. Control generally equates to ownership percentage, whereby investments that are more than 50 percent owned are consolidated, investments in affiliates of 50 percent or less but greater than 20 percent are accounted for using the equity method, and investments in affiliates of 20 percent or less are accounted for using the cost method. The Company does not consolidate any entity for which it has a variable interest based solely on power to direct the activities and significant participation in the entity s expected results that would not otherwise be consolidated based on control through voting interests. Further, the Company s joint ventures are businesses established and maintained in connection with the Company s operating strategy. All intercompany transactions and balances have been eliminated.

The Company s investment in Corporacion de Occidente (COOCSA), a Mexican tire manufacturing entity, represented an approximate 38 percent ownership interest at December 31, 2010. On January 14, 2011, the Company invested \$21,775 and acquired an additional 20 percent ownership share. The Company s ownership share is now approximately 58 percent and because of the increase in voting rights, the results of the entity have been consolidated from the date of the transaction.

The Company had entered into a joint venture, Cooper de Mexico, to market and distribute Cooper, Pneustone and associated brand tires in Mexico. The Company had determined it had the power to control the purchasing and marketing of tires for this joint venture. The Company had also provided additional financial support to this joint venture in order to allow it to finance its business activities. The joint venture partner had not provided such additional support. The Company had determined it was the primary beneficiary of this joint venture due to its ability to control the primary economic activity and due to the subordinated financial support it had provided to the entity which would require the Company to absorb more than 50 percent of expected losses. On January 14, 2011, as a result of a \$12,000 capital call, the Company achieved virtually 100 percent ownership in this Mexican marketing entity. The additional ownership was accounted for by reclassification of the negative balance of noncontrolling shareholder interest of \$4,576 to Capital in excess of par value. This entity was previously consolidated in the Company s financial results.

6

#### **Table of Contents**

The Company entered into a joint venture with Kenda Tire Company to construct and operate a tire manufacturing facility in the People's Republic of China (PRC) which began production in 2007. Until May 2012, all of the tires produced by this joint venture are required to be exported and sold by Cooper Tire & Rubber Company and its affiliates. Due to this requirement, the Company has the power to direct the manufacturing operations of the joint venture to produce the types of tires required by the Company to meet its global demands. The Company had determined it was the primary beneficiary of this joint venture because of the operational control and the fact it received all of the tires produced by this manufacturing operation. In March 2011, the Company increased its ownership in the affiliated Cooper Kenda Tire operations to 100 percent from 50 percent for cash consideration of \$116,500. In accordance with Accounting Standards Codification (ASC) 810, Consolidation, the excess of the \$116,500 over the non-controlling shareholder interest was recorded as a decrease to Capital in excess of par value, limited by the amount of Capital in excess of par value at the transaction date and to Retained earnings to reflect the additional ownership. The entity has been renamed Cooper Kunshan Tire. This entity was previously consolidated in the Company's financial results.

Since the Company had determined as of December 31, 2010 that both Cooper Kenda and Cooper de Mexico were Variable Interest Entities (VIEs) and it was the primary beneficiary, it had included their assets, liabilities and operating results in its consolidated financial statements. At December 31, 2010, the assets (principally Property, plant and equipment) of these VIEs, \$204,535, could only be used to settle obligations of those VIEs. Similarly, liabilities (principally Notes payable) of consolidated VIEs, \$80,414, at December 31, 2010 represented claims against the specific assets of the VIEs. Because of the increased ownership in these two entities, these restrictions are no longer applicable.

**Accounting Pronouncements** 

In June 2011, the Financial Accounting Standard Board (FASB) issued Accounting Standards Update (ASU) 2011-05, Presentation of Comprehensive Income, which requires an entity to present the total of comprehensive income, the components of net income, and the components of other comprehensive income either in a single continuous statement of comprehensive income, or in two separate but consecutive statements. ASU 2011-05 eliminates the option to present components of other comprehensive income as part of the statement of equity. ASU 2011-05 is effective for fiscal years and interim periods beginning after December 15, 2011. Although the Company does not expect the adoption of ASU 2011-05 to have a material effect on its consolidated financial statements, it will change its financial statement presentation.

#### Acquisition

2. On January 14, 2011, the Company invested \$21,775 and acquired an additional 20 percent ownership in COOCSA, a Mexican tire manufacturing entity in which it had previously been an equity investor. The Company s ownership share is now approximately 58 percent and because of the increase in voting rights, the results of the entity and 100 percent of its assets and liabilities will be consolidated from the date of this transaction. The Company made this additional investment as part of its strategic plan to build a sustainable, competitive cost position.

The COOCSA acquisition is being accounted for as a purchase transaction. The total consideration (including the \$21,775 paid and the fair value of the original 38 percent ownership interest) has preliminarily been allocated to the assets acquired, liabilities assumed and noncontrolling shareholder interest based on their respective fair values at January 14, 2011. This initial purchase price allocation may be adjusted within one year of the purchase date for changes in estimates of the fair value of assets acquired and liabilities assumed. Adjustments to this preliminary allocation will be made when the asset valuations have been completed. In the second quarter, changes in the valuation of property, plant and equipment and certain accrued liabilities were recorded, with a corresponding adjustment to goodwill. The Company expects the valuation process to be completed no later than December 31, 2011. The excess purchase price over the estimated fair value of the net assets acquired is allocated to goodwill. Goodwill consists of anticipated growth opportunities for COOCSA and is recorded in the North American Tire Operations segment. Goodwill is not deductible for federal income tax purposes. The operating results of

COOCSA have been included in the consolidated financial statements of the Company since the date of acquisition.

7

#### **Table of Contents**

The following table summarizes the estimated fair values of the assets acquired and liabilities assumed on January 14, 2011, translated into U.S. dollars at the exchange rate on that date.

Assets	
Cash	\$ 4,395
Inventory	14,105
Other current assets	3,400
Property, plant & equipment	84,069
Goodwill	20,687
Liabilities	
Payable to Cooper Tire & Rubber Company	(4,185)
Accounts payable	(4,990)
Accrued liabilities	(2,661)
Deferred income taxes	(9,643)
Notes payable to Cooper Tire & Rubber Company	(11,269)
	93,908
Noncontrolling shareholder interest	(37,853)
Cooper Tire & Rubber Company consideration	\$ 56,055

The Company has determined that the nonrecurring fair value measurements related to each of these assets and liabilities rely primarily on Company-specific inputs and the Company s assumptions about the use of the assets and settlement of liabilities, as observable inputs are not available and, as such, reside within Level 3 of the fair value hierarchy as defined in Footnote 4. The Company utilized a third party to assist in the fair value determination of certain components of the purchase price allocation, namely Property, plant and equipment. The valuation of Property, plant and equipment was developed using primarily the cost approach. The fair value of the Company s investment was determined based upon internal and external inputs considering various relevant market transactions and discounted cash flow valuation methods, among other factors. The fair value of noncontrolling shareholder interest was valued using the same method used to value the investment.

At December 31, 2010, the Company s previously recorded investment in COOCSA was recorded as an Investment in unconsolidated subsidiary of \$24,398 which was included in Other assets on its Consolidated Balance Sheets. The Company had also recorded a Cumulative currency loss of \$4,893 associated with this investment which was included in Cumulative other comprehensive loss on the Consolidated Balance Sheets.

In connection with its increased investment in COOCSA, the Company recorded a gain of \$4,989 on its original investment, which represents the excess of the fair value of approximately \$34,280 over the January 14, 2011 carrying value and previously unrecognized currency losses. The gain was recorded in Other income in the financial statements.

The Cooper Tire & Rubber Company consideration from the table above of \$56,055 represents the \$21,775 additional investment made by the Company plus the fair value of the original investment of \$34,280.

The acquisition does not meet the thresholds for a significant acquisition and therefore no pro forma financial information is presented.

8

#### **Table of Contents**

Earnings Per Share

3. Net income per share is computed on the basis of the weighted average number of common shares outstanding each year. Diluted earnings per share from continuing operations includes the dilutive effect of stock options and other stock units. The following table sets forth the computation of basic and diluted earnings per share:

	Three months ended June 30				Six months ended June 30			
Numerator Numerator for basic and diluted earnings per share		2010		2011	2	2010		2011
income from continuing operations available to common stockholders	\$	18,951	\$	11,523	\$ 3	31,287	\$	27,197
Denominator Denominator for basic earnings per share weighted average shares outstanding		61,292		62,196	(	51,104		62,024
Effect of dilutive securities stock options and other stock units		1,317		1,012		1,349		1,172
Denominator for diluted earnings per share adjusted weighted average shares outstanding		62,609		63,208	(	52,453		63,196
Basic earnings per share: Income from continuing operations Income from discontinued operations, net of income	\$	0.31	\$	0.19	\$	0.51	\$	0.44
taxes		0.41				0.40		
Net income attributable to Cooper Tire & Rubber Company common stockholders	\$	0.72	\$	0.19	\$	0.91	\$	0.44
Diluted earnings per share: Income from continuing operations Income from discontinued operations, net of income	\$	0.30	\$	0.18	\$	0.50	\$	0.43
taxes		0.40				0.39		
Net income attributable to Cooper Tire & Rubber Company common stockholders	\$	0.70	\$	0.18	\$	0.89	\$	0.43

Options to purchase shares of the Company s common stock not included in the computation of diluted earnings per share because the options exercise prices were greater than the average market price of the common shares were 458 and 443 at June 30, 2011 and 2010, respectively.

Derivative Instruments and Hedging Activities Disclosure

4. Derivative financial instruments are utilized by the Company to reduce foreign currency exchange risks. The Company has established policies and procedures for risk assessment and the approval, reporting and monitoring of derivative financial instrument activities. The Company does not enter into financial instruments for trading or

speculative purposes. The derivative financial instruments include fair value and cash flow hedges of foreign currency exposures. The change in values of the fair value foreign currency hedges offset exchange rate fluctuations on the foreign currency-denominated intercompany loans and obligations. The Company presently hedges exposures in the Euro, Canadian dollar, British pound sterling, Swiss franc, Swedish krona, Norwegian krone, Mexican peso and Chinese yuan generally for transactions expected to occur within the next 12 months. The notional amount of these foreign currency derivative instruments at December 31, 2010 and June 30, 2011 was \$234,600 and \$244,115, respectively. The counterparties to each of these agreements are major commercial banks.

The Company uses foreign currency forward contracts as hedges of the fair value of certain non-U.S. dollar denominated asset and liability positions, primarily accounts receivable and debt. Gains and losses resulting from the impact of currency exchange rate movements on these forward contracts are recognized in the accompanying Consolidated Statements of Operations in the period in which the exchange rates change and offset the foreign currency gains and losses on the underlying exposure being hedged.

9

#### **Table of Contents**

Foreign currency forward contracts are also used to hedge variable cash flows associated with forecasted sales and purchases denominated in currencies that are not the functional currency of certain entities. The forward contracts have maturities of less than twelve months pursuant to the Company s policies and hedging practices. These forward contracts meet the criteria for and have been designated as cash flow hedges. Accordingly, the effective portion of the change in fair value of such forward contracts (approximately \$(3,263) and \$(6,284) as of December 31, 2010 and June 30, 2011, respectively) are recorded as a separate component of stockholders equity in the accompanying Consolidated Balance Sheets and reclassified into earnings as the hedged transactions occur.

The Company assesses hedge ineffectiveness quarterly using the hypothetical derivative methodology. In doing so, the Company monitors the actual and forecasted foreign currency sales and purchases versus the amounts hedged to identify any hedge ineffectiveness. Any hedge ineffectiveness is recorded as an adjustment in the accompanying consolidated financial statements of operations in the period in which the ineffectiveness occurs. The Company also performs regression analysis comparing the change in value of the hedging contracts versus the underlying foreign currency sales and purchases, which confirms a high correlation and hedge effectiveness.

The following table presents the location and amounts of derivative instrument fair values in the Condensed Consolidated Balance Sheets:

(assets)/liabilities	December 3	1, 2010	June 30, 2011

#### **Table of Contents**

The Company has categorized its financial instruments, based on the priority of the inputs to the valuation technique, into the three-level fair value hierarchy. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure the financial instruments fall within the different levels of the hierarchy, the categorization is based on the lowest level input that is significant to the fair value measurement of the instrument.

Financial assets and liabilities recorded on the Condensed Consolidated Balance Sheets are categorized based on the inputs to the valuation techniques as follows:

Level 1. Financial assets and liabilities whose values are based on unadjusted quoted prices for identical assets or liabilities in an active market that the Company has the ability to access.

Level 2. Financial assets and liabilities whose values are based on quoted prices in markets that are not active or model inputs that are observable either directly or indirectly for substantially the full term of the asset or liability. Level 2 inputs include the following:

- a. Quoted prices for similar assets or liabilities in active markets;
- b. Quoted prices for identical or similar assets or liabilities in non-active markets;
- c. Pricing models whose inputs are observable for substantially the full term of the asset or liability; and
- d. Pricing models whose inputs are derived principally from or corroborated by observable market data through correlation or other means for substantially the full term of the asset or liability.

Level 3. Financial assets and liabilities whose values are based on prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. These inputs reflect management s own assumptions about the assumptions a market participant would use in pricing the asset or liability.

The following table presents the Company s fair value hierarchy for those assets and liabilities measured at fair value on a recurring basis as of June 30, 2011, and December 31, 2010:

		Quoted Prices in Active	Significant	
	Total Derivative (Assets)	Markets for Identical Assets	Other Observable Inputs	Significant Unobservable Inputs
Foreign Exchange Contracts	Liabilities	Level (1)	Level (2)	Level (3)
June 30, 2011	\$ 6,983	\$	\$ 6,983	\$
December 31, 2010	\$ 3,977	\$	\$ 3,977	\$

The land, building and certain manufacturing equipment located at Albany, Georgia are classified as assets held for sale at the lower of estimated fair value less costs to sell determined based on a signed Real Estate Purchase Agreement or carrying value. The carrying value of these assets is \$8,155 at June 30, 2011.

The Company has notes, secured by government-controlled banks, from certain of its customers in the PRC to settle trade accounts receivable which generally have maturities of six months or less. The fair value of the Company s debt is based upon prices of similar instruments in the market place.

11

#### **Table of Contents**

The carrying amounts and fair values of the Company s financial instruments are as follows:

	December	31, 2010	June 30	0, 2011
	Carrying	Fair	Carrying	Fair

#### Inventory Disclosure

Under the LIFO method, inventories have been reduced by approximately \$191,180 and \$261,886 at December 31, 2010 and June 30, 2011, respectively, from current cost which would be reported under the FIFO method.

<sup>6.</sup> At December 31, 2010, approximately 37 percent of the Company s inventories had been valued under the last-in, first-out (LIFO) method. At June 30, 2011, approximately 42 percent of the Company s inventories are valued under the LIFO method. The remaining inventories have been valued under the first-in, first-out (FIFO) method or average cost method. All inventories are stated at the lower of cost or market.

Disclosure of Incentive Compensation Plan

7. The Company s incentive compensation plans allow the Company to grant awards to key employees in the form of stock options, stock awards, restricted stock units, stock appreciation rights, performance units, dividend equivalents and other awards. Compensation related to these awards is determined based on the fair value on the date of grant and is amortized to expense over the vesting period. For restricted stock units and performance stock units, the Company recognizes compensation expense based on the earlier of the vesting date or the date when the employee becomes eligible to retire. If awards can be settled in cash, these awards are recorded as liabilities and marked to market.

12

#### **Table of Contents**

The following table discloses the amount of stock based compensation expense for the three and six-month periods ended June 30, 2010 and 2011:

	Three month		ended June	
	2010	2011	2010	2011
Stock options	\$ 396	<b>\$</b> 727	\$ 617	\$ 1,220
Restricted stock units	477	316	644	598
Performance stock units	1,572	317	2,271	521
Total stock based compensation	\$ 2,445	\$ 1,360	\$ 3,532	\$ 2,339

#### Stock Options

In April 2009, executives participating in the 2009 2011 Long-Term Incentive Plan were granted 1,155,000 stock options which will vest one third each year through April 2012. This plan does not contain any performance based criteria. In March 2010, executives participating in the 2010 2012 Long-Term Incentive Plan were granted 303,120 stock options which will vest one third each year through March 2013. During 2011, executives participating in the 2011 2013 Long-Term Incentive Plan were granted 311,670 stock options which will vest one third each year through 2014. The fair value of these options was estimated at the date of grant using a Black-Scholes option pricing model with the following weighted-average assumptions:

	2010	2011
Risk-free interest rate	2.8%	<b>2.7</b> %
Dividend yield	2.2%	1.8%
Expected volatility of the Company s common stock	0.604	0.615
Expected life in years	6.0	6.0

The weighted average fair value of options granted in 2010 and 2011 was \$9.01 and \$11.57, respectively.

The following table provides details of the stock option activity for the six months ended June 30, 2011:

		<b>Long-Term Incentive Plan Years</b>						
		2009 -						
		2011	2010 - 2012	2011 - 2013

Exercisable		410,000	91,008	,				
	13		·					

#### **Table of Contents**

#### Restricted Stock Units

Under the Company s various Incentive Compensation Plans, restricted stock units may be granted to officers and other key employees. Compensation related to the restricted stock units is determined based on the fair value of the Company s stock on the date of grant and is amortized to expense over the vesting period. The restricted stock units granted in 2011 have vesting periods ranging from three to four years.

The following table provides details of the restricted stock unit activity for the six months ended June 30:

	2010	2011
Restricted stock units outstanding at January 1	526,809	242,273
Restricted stock units granted		100,400
Accrued dividend equivalents	2,981	2,962
Restricted stock units settled	(250,021)	(23,491)
Restricted stock units cancelled	(4,149)	(1,638)
Restricted stock units outstanding at June 30	275,620	320,506

#### Performance Stock Units (PSUs)

Executives participating in the Company s Long-Term Incentive Plan for the plan year 2007 2009 and 2008 2010 earn performance stock units based on the Company s financial performance. As part of the 2007 2009 plan, the units earned in 2007 and 2009 vested in February 2010. As part of the 2008 2010 plan, the units earned in 2009 and 2010 vested at December 31, 2010. No units were earned in 2008.

Executives participating in the Company s Long-Term Incentive Plan for the plan year 2010 2012, earn performance stock units and cash. Units and cash earned during 2010 and any units and cash earned during 2011 will vest at December 31, 2012.

Executives participating in the Company s Long-Term Incentive Plan for the plan year 2011 2013, earn performance stock units and cash. Any units and cash earned during 2011 will vest at December 31, 2013.

The following table provides details of the performance stock units earned under the Company s Long-Term Incentive Plans for the six months ended June 30:

14

#### **Table of Contents**

	Long-Term In				
	Yea	rs			
	2007-2009	2008-2010			
Performance stock units outstanding at January 1, 2010	559,951	290,860			
Accrued dividend equivalents		3,138			
Performance stock units settled	(559,951)				
Performance stock units outstanding at June 30, 2010		293,998			
	2008-2010	2010-2012			
Performance stock units outstanding at January 1, 2011	480,858	60,082 602			
Performance stock units settled Performance stock units outstanding at June 30, 2010	(480,858)				

#### Performance stock units outstanding at June 30, 2011

60,684

The Company s restricted stock units and performance stock units are not participating securities. These units will be converted into shares of Company common stock in accordance with the distribution date indicated in the agreements. Restricted stock units earn dividend equivalents from the time of the award until distribution is made in common shares. Performance stock units earn dividend equivalents from the time the units have been earned based upon Company performance metrics until distribution is made in common shares. Dividend equivalents are only earned subject to vesting of the underlying restricted stock units or performance stock units, accordingly, such units do not represent participating securities.

Defined Benefit Plans And Other Postretirement Benefits Disclosure

\$ 101,383

\$ 66,021

#### **Product Warranty Liabilities**

10. The Company provides for the estimated cost of product warranties at the time revenue is recognized based primarily on historical return rates, estimates of the eligible tire population and the value of tires to be replaced. The following table summarizes the activity in the Company s product warranty liabilities:

17

#### **Table of Contents**

	2010	2011
Reserve at January 1	\$ 23,814	\$ 24,924
Additions	9,813	19,213
Payments	(9,370)	(13,648)
Reserve at June 30	\$ 24.257	\$ 30,489

The increase in the warranty provision is due primarily to increased truck and bus tire sales in the PRC and the increased prices of tires used to compute the warranty provision.

#### Commitments and Contingencies Disclosure

11. The Company is a defendant in various products liability claims brought in numerous jurisdictions in which individuals seek damages resulting from automobile accidents allegedly caused by defective tires manufactured by the Company. Each of the products liability claims faced by the Company generally involve different types of tires, models and lines, different circumstances surrounding the accident such as different applications, vehicles, speeds, road conditions, weather conditions, driver error, tire repair and maintenance practices, service life conditions, as well as different jurisdictions and different injuries. In addition, in many of the Company s products liability lawsuits the plaintiff alleges that his or her harm was caused by one or more co-defendants who acted independently of the Company. Accordingly, both the claims asserted and the resolutions of those claims have an enormous amount of variability. The aggregate amount of damages asserted at any point in time is not determinable since often times when claims are filed, the plaintiffs do not specify the amount of damages. Even when there is an amount alleged, at times the amount is wildly inflated and has no rational basis. The fact that the Company is a defendant in products liability lawsuits is not surprising given the current litigation climate which is largely confined to the United States. However, the fact that the Company is subject to claims does not indicate that there is a quality issue with the Company s tires. The Company sells approximately 30 to 35 million passenger, light truck, SUV, high performance, ultra high performance and radial medium truck tires per year in North America. The Company estimates that approximately 300 million Cooper-produced tires made up of thousands of different specifications are still on the road in North America. While tire disablements do occur, it is the Company s and the tire industry s experience that the vast majority of tire failures relate to service-related conditions which are entirely out of the Company s control such as failure to maintain proper tire pressure, improper maintenance, road hazard and excessive speed.

The Company s exposure for each claim for incidents occurring prior to April 1, 2003 is limited by the coverage provided by its excess liability insurance program. The program for that period includes a relatively low per claim retention and a policy year aggregate retention limit on claims arising from occurrences which took place during a particular policy year. Effective April 1, 2003, the Company established a new excess liability insurance program. The new program covers the Company s products liability claims for incidents occurring on or after April 1, 2003 and is occurrence-based insurance coverage which includes an increased per claim retention limit, increased policy limits and the establishment of a captive insurance company.

The Company accrues costs for products liability at the time a loss is probable and the amount of loss can be estimated. The Company believes the probability of loss can be established and the amount of loss can be estimated only after certain minimum information is available, including verification that Company-produced products were involved in the incident giving rise to the claim, the condition of the product purported to be involved in the claim, the nature of the incident giving rise to the claim and the extent of the purported injury or damages. In cases where such information is known, each products liability claim is evaluated based on its specific facts and circumstances. A judgment is then made to determine the requirement for establishment or revision of an accrual for any potential liability. The liability often cannot be determined with precision until the claim is resolved.

18

#### **Table of Contents**

Pursuant to applicable accounting rules, the Company accrues the minimum liability for each known claim when the estimated outcome is a range of possible loss and no one amount within that range is more likely than another. The Company uses a range of losses because an average cost would not be meaningful since the products liability claims faced by the Company are unique and widely variable, and accordingly, the resolutions of those claims have an enormous amount of variability. The costs have ranged from zero dollars to \$33,000 in one case with no average that is meaningful. No specific accrual is made for individual unasserted claims or for premature claims, asserted claims where the minimum information needed to evaluate the probability of a liability is not yet known. However, an accrual for such claims based, in part, on management s expectations for future litigation activity and the settled claims history is maintained. Because of the speculative nature of litigation in the United States, the Company does not believe a meaningful aggregate range of potential loss for asserted and unasserted claims can be determined. The Company s experience has demonstrated that its estimates have been reasonably accurate and, on average, cases are resolved for amounts close to the reserves established. However, it is possible an individual claim from time to time may result in an aberration from the norm and could have a material impact.

The Company determines its reserves using the number of incidents expected during a year. During the second quarter of 2011, the Company increased its products liability reserve by \$20,475. The addition of another quarter of self-insured incidents accounted for \$10,321 of this increase. The Company revised its estimate of future settlements for unasserted and premature claims increasing the reserve by \$1,660. Finally, changes in the amount of reserves for cases where sufficient information is known to estimate a liability increased by \$8,494. During the first six months of 2011, the Company increased its products liability reserve by \$38,125. The addition of another six months of self-insured incidents accounted for \$20,470 of this increase. The Company revised its estimates of future settlements for unasserted and premature claims, which increased the reserve by \$3,440. Finally, changes in the amount of reserves for cases where sufficient information is known to estimate a liability increased by \$14,215.

The time frame for the payment of a products liability claim is too variable to be meaningful. From the time a claim is filed to its ultimate disposition depends on the unique nature of the case, how it is resolved—claim dismissed, negotiated settlement, trial verdict and appeals process—and is highly dependent on jurisdiction, specific facts, the plaintiff—s attorney, the court—s docket and other factors. Given that some claims may be resolved in weeks and others may take five years or more, it is impossible to predict with any reasonable reliability the time frame over which the accrued amounts may be paid.

The Company paid \$9,295 during the second quarter of 2011 to resolve cases and claims and has paid \$24,370 through the first six months of 2011. The Company s products liability reserve balance at December 31, 2010 totaled \$191,033 (current portion of \$41,892) and the balance at June 30, 2011 totaled \$204,788 (current portion of \$60,358).

The products liability expense reported by the Company includes amortization of insurance premium costs, adjustments to settlement reserves and legal costs incurred in defending claims against the Company offset by recoveries of legal fees. Legal costs are expensed as incurred and products liability insurance premiums are amortized over coverage periods. The Company is entitled to reimbursement, under certain insurance contracts in place for periods ending prior to April 1, 2003, of legal fees expensed in prior periods based on events occurring in those periods. The Company records the reimbursements under such policies in the period the conditions for reimbursement are met.

For the three-month periods ended June 30, 2010 and 2011, products liability expenses totaled \$15,120 and \$27,097, respectively, and include recoveries of legal fees of \$5,569 and \$3 in these periods. For the six-month periods ended June 30, 2010 and 2011, products liability expenses totaled \$59,718 and \$52,514, respectively, and include recoveries of legal fees of \$5,575 and \$37 in these periods. Policies applicable to claims occurring on April 1, 2003 and thereafter do not provide for recovery of legal fees.

Income Tax Related Disclosure

12. For the quarter ended June 30, 2011, the Company recorded an income tax expense for continuing operations of \$1,621 compared to \$1,247 for the comparable period in 2010. The provision includes a tax benefit for discrete items of \$1,233 relating primarily to the favorable impact on deferred tax assets from a non-U.S. tax rate adjustment of \$795 and other deferred tax asset adjustments and valuation allowance impacts of \$438. For the six-month period ended June 30, 2011, the Company recorded income tax expense for continuing operations of \$12,080 as compared to \$8,990 for the comparable period in 2010. The provision includes a tax expense for discrete items of \$1,434 relating primarily to increased deferred taxes resulting from consolidation of the increased investment in Mexico (\$1,691) and other deferred tax asset adjustments and valuation allowance impacts of \$257.

The effective tax rate for the three month and six month periods ended June 30, 2011, for continuing operations is 17.8 percent and 23.7 percent, respectively, exclusive of discrete items, using the applicable effective tax rate determined using forecasted multi-jurisdictional annual effective tax rates. For comparable periods in 2010, the effective tax rate for continuing operations, exclusive of discrete items, was 24.0 percent and 21.4 percent, respectively.

The \$374 increase in tax expense for the quarter relates primarily to the impact from decreased earnings at the U.S. statutory rate of \$(3,575); the impact from changes to the U.S. valuation allowances of \$1,414; differences in the effective tax rates of international operations and the impact of the changes in the mix of earnings or loss by jurisdiction of \$(1,291); and changes in discrete items of \$3,826.

The \$3,090 increase in tax expense for the six-month period relates primarily to the impact from decreased earnings at the U.S. statutory rate of \$(2,434); the impact from changes to the U.S. valuation allowances of \$1,631; differences in the effective tax rates of international operations and the impact of the changes in the mix of earnings or loss by jurisdiction of \$302; and changes in discrete items of \$3,591.

The Company maintains a valuation allowance on its net U.S. deferred tax asset position. A valuation allowance is required pursuant to ASC 740, Accounting for Income Taxes, when, based upon an assessment which is largely dependent upon objectively verifiable evidence including recent operating loss history, expected reversal of existing deferred tax liabilities and tax loss carry back capacity, it is more likely than not that some portion of the deferred tax assets will not be realized. The valuation allowance will be maintained as long as it is more likely than not that some portion of the deferred tax asset may not be realized. Deferred tax assets and liabilities are determined separately for each taxing jurisdiction in which the Company conducts its operations or otherwise generates taxable income or losses. In the U.S., the Company has recorded significant deferred tax assets, the largest of which relate to products liability, pension and other postretirement benefit obligations. These deferred tax assets are partially offset by deferred tax liabilities, the most significant of which relates to accelerated depreciation. Based upon this assessment, the Company maintains a \$170,589 valuation allowance for the portion of U.S. deferred tax assets exceeding its U.S. deferred tax liabilities. In addition, the Company has recorded valuation allowances of \$7,013 for deferred tax assets associated with the portion of non-U.S. deferred tax assets exceeding the non-U.S. deferred tax liabilities for a total valuation allowance of \$177,602.

In conjunction with the Company s ongoing review of its actual results and anticipated future earnings, the Company reassesses the possibility of releasing the valuation allowance currently in place on its U.S. deferred tax assets. Based upon this assessment, the release of a significant portion the valuation allowance will likely occur during 2011. The required accounting for the release will involve significant tax amounts and it will impact earnings in the quarter in which it is deemed appropriate to release the reserve.

The Company maintains an ASC 740-10, Accounting for Uncertainty in Income Taxes liability for unrecognized tax benefits for permanent and temporary book/tax differences for continuing operations. At June 30, 2011, the Company s liability, exclusive of interest, totals \$9,123. The Company accrued \$20 and \$35 of interest expense for the three and six-month periods ending June 30, 2011 which has been recorded as a discrete item in its tax provision.

20

#### **Table of Contents**

At June 30, 2011, the Company has a receivable for \$25,078 of cash tax refunds, including interest. It is anticipated that the Company will collect or apply \$11,028 of these receivables in 2011 with the balance to be collected upon the completion of the IRS audit currently in process.

In 2003 the Company initiated bilateral Advance Pricing Agreement (APA) negotiations with the Canadian and U.S. governments to change its intercompany transfer pricing process between a formerly owned subsidiary, Cooper-Standard Automotive, Inc., (CSA) and its Canadian affiliate. The governments settled the APA in 2009 and on August 3, 2009, Cooper-Standard Holdings Inc. filed a Bankruptcy petition. On August 19, 2009, the Company filed an action in the United States Bankruptcy Court, District of Delaware, in response to the tax refunds owed to the Company pursuant to the September 16, 2004 sale agreement of CSA for pre-disposition periods ending December 23, 2004. On March 17, 2010, the Company entered into a settlement agreement to resolve the subject proceedings, which became non- appealable on April 29, 2010. Pursuant to the settlement agreement, CSA paid the Company approximately \$17,639, in addition to the resolution of other contingent liabilities between the parties. Based upon the settlement, the Company released liabilities recorded on its books relating to the disposition of CSA in the amount of \$7,400 through Discontinued Operations, net of the tax impact, in the quarter ended June 30, 2010.

The Company and its subsidiaries are subject to income taxes in the U.S. federal jurisdiction and various state and foreign jurisdictions. With few exceptions, the Company is no longer subject to U.S. federal, state and foreign tax examinations by tax authorities for years prior to 2005.

#### Noncontrolling Interest Disclosure

13. In connection with the investment in Cooper Chengshan, beginning January 1, 2009 and continuing through December 31, 2011, the noncontrolling shareholders have the option, which is embedded in the noncontrolling interest, to require the Company to purchase the original 49 percent noncontrolling share at the greater of a minimum price of \$62,700 or a formula price that varies based on operating results of the entity. The combination of a noncontrolling interest and a put option resulted in a redeemable noncontrolling shareholder interest. The put option is not separated from the shares as an embedded derivative because the underlying shares are not readily convertible into cash.

The noncontrolling interest is redeemable at other than fair value as the put value is determined based on a specified formula as described above. The Company records the noncontrolling shareholders—interests in Cooper Chengshan at the greater of 1) the initial carrying amount, increased or decreased for the noncontrolling shareholders—share of net income or loss and its share of other comprehensive income or loss and dividends (carrying amount) or 2) the value of the put option which is determined based on the greater of the minimum amount or the formula derived amount. According to authoritative accounting guidance, the Redeemable noncontrolling shareholders—interests are classified outside of permanent equity, as a mezzanine item, on the Company s Condensed Consolidated Balance Sheets.

In 2009, the Company was notified by a noncontrolling shareholder that it had exercised its put option and after governmental approval, the Company purchased the 14 percent share for \$17,920 on March 31, 2010. The remaining noncontrolling shareholder has the right to sell its 35 percent share to the Company at a minimum price of \$44,780. At June 30, 2011, the formula price exceeds the minimum price, however, the carrying value exceeds the formula price and the carrying value is the amount shown on the Company s Condensed Consolidated Balance Sheets.

If the put option is not exercised and expires on December 31, 2011, the amount of Redeemable noncontrolling shareholder interest will be reclassified into equity and included as part of Noncontrolling shareholders interests in consolidated subsidiaries.

# Item 2. MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) presents information related to the consolidated results of the operations of the Company, a discussion of past results for both of the Company's segments, future outlook for the Company and information concerning both the liquidity and capital resources of the Company. The Company's future results may differ materially from those indicated herein, for reasons including those indicated under the forward-looking statements heading below.

Consolidated net sales for the three-month period ended June 30, 2011 were \$118 million higher than the comparable period one year ago. The increase in net sales for the second quarter of 2011 compared with the second quarter of 2010 was primarily the result of favorable pricing and mix (\$220 million) in both the North American and International Tire Operations segments. Offsetting the favorable pricing and mix were lower unit volumes (\$115 million) in both segments. The International Tire Operations segment also experienced favorable exchange rates in the second quarter (\$13 million).

Operating profit in the second quarter of 2011 decreased by \$10 million from the second quarter of 2010. Higher raw material costs in the North American and International Tire Operations segments (\$194 million) and reduced unit volumes (\$14 million) were partially offset by improved pricing and mix (\$184 million) and manufacturing efficiencies (\$13 million) in both segments. Reduced selling, general and administrative costs (\$7 million) throughout the Company and the absence of restructuring costs (\$7 million) in the North American Tire Operations segment contributed favorably to the Company s operating profit. Products liability expense increased (\$12 million) from the second quarter of 2010.

22

#### **Table of Contents**

Consolidated net sales for the six-month period ended June 30, 2011, were \$270 million higher than the comparable period one year ago. The increase in net sales for the first six months of 2011 compared to the first six months of 2010 was primarily the result of favorable pricing and mix (\$366 million) in both the North American and International Tire Operations segments. Offsetting the favorable pricing and mix were lower unit volumes (\$116 million) in both segments. The International Tire Operations segment also experienced favorable exchange rates in the first six months of 2011 (\$20 million).

Operating profit in the first six months of 2011 decreased by \$10 million from the first six months of 2010. Higher raw material costs in the North American and International Tire Operations segments (\$357 million) were partially offset by improved pricing and mix (\$311 million) and manufacturing efficiencies (\$18 million) in both segments. The non-recurrence of restructuring costs (\$15 million) and decreased products liability expense (\$7 million) in the North American Tire Operations segment contributed favorably to the Company s operating profit. Additionally, the inclusion of COOCSA was incremental to the operating profit of the North American Tire Operations segment (\$3 million). Reduced unit volumes (\$4 million) and increased other operating costs (\$3 million) were unfavorable from the first six months of 2010.

The Company continued to experience significant increases in the costs of certain of its principal raw materials in the first half of 2011 compared with the first half of 2010 levels. The principal raw materials for the Company include natural rubber, synthetic rubber, carbon black, chemicals and steel reinforcement components. Approximately 65 percent of the Company s raw materials are petroleum-based. The increases in the cost of natural rubber and petroleum-based materials were the most significant drivers of higher raw material costs during the first half of 2011, which were \$357 million higher than the same period in 2010.

The Company strives to assure raw material supply and to obtain the most favorable pricing possible. For natural rubber and natural gas, procurement is managed through a combination of buying forward of production requirements and utilizing the spot market. For other principal materials, procurement arrangements include supply agreements that may contain formula-based pricing based on commodity indices, multi-year agreements or spot purchase contracts. While the Company uses these arrangements to satisfy normal manufacturing demands, the pricing volatility in these commodities contributes to the difficulty in managing the costs of raw materials.

Products liability expenses totaled \$27 million and \$15 million in the second quarter of 2011 and 2010, respectively, and included recoveries of legal fees of \$6 million in the second quarter of 2010. The change in expense in the second quarter of 2011 is a result of the non-recurrence of the legal recoveries, as well as continued adjustments to existing reserves based on the quarterly comprehensive review of outstanding claims. Products liability expenses totaled \$53 million and \$60 million in the first six months of 2011 and 2010, respectively, and included recoveries of legal fees of \$6 million in the first six months of 2010. The majority of the decrease in products liability expense for the year is due to the Company recording an additional \$22 million for its self-insured portion of a jury verdict in one case during the first quarter of 2010. The Company intends to appeal this case. Additional information related to the Company s accounting for products liability costs appears in the Notes to the Condensed Consolidated Financial Statements.

Selling, general, and administrative expenses were \$48 million in the second quarter of 2011 (5.3 percent of net sales) and \$54 million in the second quarter of 2010 (6.8 percent of net sales). This decrease was due to reduced incentive based compensation, decreases in accruals for stock-based liabilities and lower professional service expense. For the six-month period ended June 30, 2011, selling, general and administrative expenses were \$101 million (5.5 percent of net sales) compared to \$99 million (6.3 percent of net sales) for the comparable period of 2010.

During the second quarter of 2010, the Company recorded \$7 million in restructuring costs related to the closure of its Albany, Georgia manufacturing facility and a personnel reduction initiative in Cooper Europe. For the six months ended June 30, 2010, the Company recorded \$15 million in restructuring costs related to these initiatives. Interest expense and interest income have remained relatively constant during both the second quarter and on a

year-to-date basis when compared to the comparable periods of 2010.

#### **Table of Contents**

Other income decreased by \$1 million in the second quarter of 2011 compared to 2010, primarily as a result of the change in the accounting for COOCSA in 2011. COOCSA was treated as an unconsolidated subsidiary prior to the acquisition of an additional 20 percent ownership in the first quarter of 2011. Other income increased by \$4 million for the first six months of 2011 compared to 2010. In connection with its increased investment in COOCSA, the Company recorded a gain of \$5 million on its original investment, which represents the excess of the fair value of approximately \$34 million over the carrying value of the investment as of the transaction date. Partially offsetting this gain were lower foreign currency gains recorded during the first six months of 2011.

For the quarter ended June 30, 2011, the Company recorded an income tax expense for continuing operations of \$1.6 million compared to \$1.2 million for the comparable period in 2010. The provision includes a tax benefit for discrete items of \$1.2 million relating primarily to the favorable impact on deferred tax assets from a non-U.S. tax rate adjustment of \$0.8 million and the valuation allowance impact from other adjustments to deferred tax assets of \$0.4 million. For the six-month period ended June 30, 2011, the Company recorded income tax expense for continuing operations of \$12.1 million as compared to \$9.0 million for the comparable period in 2010. The provision includes a tax expense for discrete items of \$1.4 million relating primarily to increased deferred taxes resulting from consolidation of the increased investment in Mexico (\$1.7 million) and other deferred tax asset adjustments and valuation allowance impacts of \$0.3 million.

The effective tax rate for the three month and six month periods ended June 30, 2011, for continuing operations is 17.8 percent and 23.7 percent, respectively, exclusive of discrete items, using the applicable effective tax rate determined using the forecasted multi-jurisdictional annual effective tax rates. For comparable periods in 2010, the effective tax rate for continuing operations, exclusive of discrete items, was 24.0 percent and 21.4 percent, respectively.

The \$0.4 million increase in tax expense for the quarter relates primarily to the impact from decreased earnings at the U.S. statutory rate of \$(3.5) million; the impact from changes to the U.S. valuation allowances of \$1.4 million; differences in the effective tax rates of international operations and the impact of the changes in the mix of earnings or loss by jurisdiction of \$(1.3); and changes in discrete items of \$3.8 million.

For the six month period ended June 30, 2011, the Company recorded income tax expense for continuing operations of \$12.1 million compared to a tax expense of \$9.0 million recorded for the comparable period ended June 30, 2010. The \$3.1 million increase in tax expense relates primarily to the impact from decreased earnings at the U.S. statutory rate of \$(2.4) million; the impact from changes to the U.S. valuation allowances of \$1.6 million; differences in the effective tax rates of international operations and the impact of the changes in the mix of earnings or loss by jurisdiction of \$0.3 million; and changes in discrete items of \$3.6 million.

The Company maintains a valuation allowance on its net U.S. deferred tax asset position. A valuation allowance is required pursuant to ASC 740 relating to Accounting for Income Taxes , when, based upon an assessment which is largely dependent upon objectively verifiable evidence including recent operating loss history, expected reversal of existing deferred tax liabilities and tax loss carry back capacity, it is more likely than not that some portion of the deferred tax assets will not be realized. The valuation allowance will be maintained as long as it is more likely than not that some portion of the deferred tax asset may not be realized. Deferred tax assets and liabilities are determined separately for each taxing jurisdiction in which the Company conducts its operations or otherwise generates taxable income or losses. In the U.S., the Company has recorded significant deferred tax assets, the largest of which relate to products liability, pension and other postretirement benefit obligations. These deferred tax assets are partially offset by deferred tax liabilities, the most significant of which relates to accelerated depreciation. Based upon this assessment, the Company maintains a \$170.6 million valuation allowance for the portion of U.S. deferred tax assets exceeding its U.S. deferred tax liabilities. In addition, the Company has recorded valuation allowances of \$7.0 million for deferred tax assets associated with the portion of non-U.S. deferred tax assets exceeding the non-U.S. deferred tax liabilities for a total valuation allowance of \$177.6 million.

In conjunction with the Company s ongoing review of its actual results and anticipated future earnings, the Company reassesses the possibility of releasing the valuation allowance currently in place on its U.S. deferred tax assets. Based upon this assessment, the release of a significant portion the valuation allowance will likely occur

#### **Table of Contents**

during 2011. The required accounting for the release will involve significant tax amounts and it will impact earnings in the quarter in which it is deemed appropriate to release the reserve.

As discussed in the Notes to Consolidated Financial Statements, the Company was involved with APA negotiations with the governments of Canada and the U. S. since 2003. During the second quarter of 2010, based upon the settlement of the Company s action filed in the United States Bankruptcy Court, District of Delaware, the Company received approximately \$18 million and released liabilities recorded on its books relating to the disposition of CSA in the amount of \$7 million through Discontinued Operations, net of the tax impact.

#### Overview

The North American Tire Operations segment manufactures and markets passenger car and light truck tires, primarily for sale in the U.S. replacement market. The segment also distributes tires for racing, medium truck and motorcycles that are manufactured at the Company subsidiaries. Major distribution channels and customers include independent tire dealers, wholesale distributors, regional and national retail tire chains, and large retail chains that sell tires as well as other automotive products. The segment does not sell its products directly to end users, except through three Company-owned retail stores, and does not manufacture tires for sale to the automobile OEMs.

#### **Table of Contents**

#### Sales

Sales of the North American Tire Operations segment increased by \$92 million, or 16.0 percent from the sales levels achieved in the second quarter of 2010. The increase in sales was a result of favorable pricing and mix (\$133 million), offset by decreased volume (\$41 million). In the United States, the segment s unit sales of total light vehicle tires decreased by 11.9 percent in the second quarter of 2011 compared with the second quarter of 2010. This decrease exceeded the 5.4 percent decrease in total light vehicle shipments experienced by all members of the Rubber Manufacturers Association and was also more than the 6.8 percent decrease in total light vehicle shipments for the total industry (which includes an estimate for non-RMA members). Weak industry conditions in North America unfavorably impacted tire manufacturers in the period, most significantly in the broadline tire markets. Volumes in the segment decreased more significantly than the industry due to the segment substantial presence in these markets. While the segment underperformed the industry in April and May, actions taken resulted in the segment outperforming the industry in June.

Sales of the North American Tire Operations segment increased by \$208 million, or 18.8 percent, in the first six months of 2011 from levels in 2010. The increase in sales was the result of favorable pricing and mix. In the United States, the segment s unit shipments of total light vehicle tires decreased by 1.9 percent in the first six months of 2011 compared with the same period in 2010. This decrease compared to the 0.5 percent increase in total light vehicle shipments experienced by all members of the RMA, and the 0.8 percent decrease in total light vehicle shipments for the total industry for the first six months. The performance of the segment against the industry for the six-month period is attributable to the same factors outlined for the second quarter.

# **Operating Profit**

North American Tire segment operating profit decreased by \$16 million in the second quarter of 2011 compared to the second quarter of 2010. Operating profit decreased primarily as a result of higher raw material costs (\$119 million) and reduced unit volumes (\$11 million). These were partially offset by improved pricing and mix (\$103 million), manufacturing efficiencies (\$11 million), reduced selling, general and administrative costs (\$3 million) and the non-recurrence of restructuring costs (\$7 million). The inclusion of COOCSA was incremental to the operating profit of the segment in the second quarter (\$2 million). Products liability expense increased (\$12 million) from the second quarter of 2010.

Operating profit for the segment decreased \$8 million in the first six months of 2011 from the first six months of 2010. The decrease in operating profit was driven by higher raw material costs (\$209 million). Improved pricing and mix (\$160 million), manufacturing efficiencies (\$15 million), the non-recurrence of restructuring costs (\$14 million), decreased products liability charges (\$7 million) and decreased selling, general and administrative costs (\$2 million) partially offset the higher material costs. The inclusion of the operating profit of COOCSA was incremental to the operating profit of the segment in the first six months of 2011 (\$3 million).

The North American Tire Operations segment continued to experience significant increases in the costs of certain of its raw materials in the first half of 2011 compared with the first half of 2010 levels. The segment s internally calculated raw material index of 267 during the quarter was an increase of 35 percent for the three months ended June 30, 2011 from the same period of 2010. The raw material index increased 12 percent from the quarter ended March 31, 2011.

26

#### **Table of Contents**

### **International Tire Operations Segment**

	Three months ended June 30			Six months ended June 30		
(Dollar amounts in millions)	2010	Change	2011	2010	Change	2011
Net sales	\$ 312.2	26.7%	\$ 395.6	\$ 605.7	25.3%	\$ 759.0
Operating profit	\$ 20.5	13.7%	\$ 23.3	\$ 43.1	0.7%	\$ 43.4
Operating margin	6.5%	(.6) points	5.9%	7.2%	(1.5) points	5.7%
Unit sales change		-9.7%			-7.0%	

### Overview

The International Tire Operations segment has affiliated operations in the U.K. and the PRC. The U.K. entity manufactures and markets passenger car, light truck, motorcycle and racing tires and tire retread material for the global market. The Cooper Chengshan Tire joint venture manufactures and markets radial and bias medium truck tires as well as passenger and light truck tires for the global market. Cooper Kunshan Tire currently manufactures light vehicle tires to be exported to markets outside of the PRC until May 2012. Only a small percentage of the tires manufactured by the segment are sold to OEMs.

### **Sales**

Sales of the International Tire Operations segment increased by \$83 million, or 26.7 percent, in the second quarter of 2011 compared to the second quarter of 2010. The increase in sales was a result of favorable pricing and mix (\$87 million), offset by decreased volume (\$17 million). The segment also experienced favorable exchange rates in the second quarter (\$13 million). The segment segment was attributable to its continued exit from bias tire production, weakness in demand in the domestic PRC truck and bus tire market, and the decision to prioritize profit rather than volume in certain export markets.

Sales of the International Tire Operations segment increased by \$153 million, or 25.3 percent, in the first six months of 2011 compared to the same period in 2010. The segment experienced favorable pricing and mix (\$163 million), partially offset by decreased volume (\$30 million). The segment also experienced favorable exchange rates in the period (\$20 million). The decrease in volume on a year-to-date basis is due to the decision to not operate over the New Year holiday in the PRC, the continued exit from bias tire production, weakness in demand in the domestic PRC truck and bus tire market, and the decision to prioritize profit rather than volume in certain export markets.

# **Operating Profit**

International Tire operating profit in the second quarter of 2011 was \$3 million higher than in the same period of 2010. The increase in operating profit was due to improved pricing and mix (\$81 million) and manufacturing efficiencies (\$3 million). These improvements were partially offset by higher raw material costs (\$75 million), decreased volume (\$4 million) and higher other operating costs (\$2 million).

Operating profit for the segment in the first six months of 2011 was \$43 million, equal to the same period for 2010. For the first six months of 2011, operating profit was impacted by improved pricing and mix (\$153 million) and manufacturing efficiencies (\$3 million). These improvements were offset by higher raw material costs (\$148 million), decreased volume (\$4 million) and other operating costs (\$4 million).

27

### **Table of Contents**

The International Tire Operations segment experienced significant increases in the costs of certain of its raw materials in the first half of 2011 as compared to the first half of 2010, consistent with that experienced in the North American Tire Operations segment. Raw material costs per unit sold have increased 41% for the six months ended June 30, 2011 as compared to the same period in 2010.

# **Outlook for Company**

The Company expects industry demand for tires will continue to vary by region. Demand in developing markets, including the PRC, should be robust while more mature tire markets should grow in the medium and long term in a range similar to normal historical rates of 1 to 3 percent annually. Demand for broadline tires in the United States is expected to remain depressed until there is improvement in consumer sentiment. Capital investments are expected to be between \$140 million and \$160 million in 2011. The Company will also continue to search for additional tire sources that are a good fit for its long term strategic direction while providing necessary short term economic benefits. Raw material costs are forecasted to remain at elevated levels in the future, but persistent volatility can make it difficult to accurately predict these movements in raw material prices. The Company s raw material index is likely to be sequentially higher by less than five percent during the third quarter from the second quarter of 2011. The raw material index is expected to be relatively flat in the fourth quarter of 2011.

The Company expects its effective tax rate for 2011 will most likely be between 20 percent and 30 percent. The Company s focus is on efforts that will continue to better position the Company to improve shareholder returns. The Company remains optimistic about opportunities to further improve results as it successfully implements tactics that will profitably grow the top line, improve its global cost structure and improve organizational capabilities.

# **Liquidity and Capital Resources**

Generation and uses of cash Net cash used in operating activities of continuing operations was \$55 million during the first six months of 2011 compared to a net cash generation of \$29 million during the first six months of 2010. Inventory balances continue to increase as a result of higher raw material costs and higher finished goods unit levels and costs. The increase in accrued liabilities is the result of the increased current portion for products liability and the timing of payments. The increase in the current portion of products liability is offset by a decrease in the long-term portion which is a component of Other items. The Company s pension contributions are also included as part of Other items.

Net cash used in investing activities during the first six months of 2010 and 2011 reflect capital expenditures of \$45 million and \$83 million, respectively. During the first quarter of 2011, the Company invested \$17 million to increase its ownership percentage in COOCSA to approximately 58 percent, and because of the increase in voting rights, now consolidates the results of those operations.

During the first six months of 2010 and 2011, the Company repaid \$15 million and \$13 million of debt, respectively. In 2011, the Company issued \$20 million of long-term notes in the PRC. In 2010, the Company s Cooper Kunshan joint venture received \$5 million of capital contributions from its joint venture partner. In 2011, the Company paid \$117 million to purchase the remaining 50 percent ownership interest in this joint venture. Also in the first quarter of 2010, the Company paid \$18 million to purchase an additional 14 percent interest in its Cooper Chengshan joint venture increasing its ownership share to 65 percent.

Dividends paid on the Company s common shares in the first six months of 2010 and 2011 were \$13 million. During the first six months of 2010 and 2011, the Company paid \$12 million and \$6 million in dividends to noncontrolling shareholders in the Cooper Chengshan joint venture, respectively.

28

### **Table of Contents**

Available credit facilities Domestically, the Company has a revolving credit facility with a consortium of four banks that provides up to \$200 million based on available collateral and, in July of 2011, the expiration of this facility was extended until July 2016. The Company also has an accounts receivable securitization facility which was amended in June 2011 to extend the maturity until June 2014. In July 2011, the limit of this facility was increased to \$175 million. These credit facilities have no significant financial covenants until available credit is less than specified amounts and at June 30, 2011, were undrawn.

The Company s consolidated joint ventures in Asia have annual renewable unsecured credit lines that provide up to \$350 million of borrowings and do not contain financial covenants.

Available cash and contractual commitments At June 30, 2011, the Company had cash and cash equivalents of \$138 million. The Company s additional borrowing capacity, based on eligible collateral through use of its credit facility with its bank group and its accounts receivable securitization facility at June 30, 2011, was \$268 million. The additional borrowing capacity on the Asian credit lines totaled \$191 million.

The Company believes that available cash and credit facilities will be adequate to fund its needs, including working capital requirements, projected capital expenditures, including its portion of capital expenditures in partially-owned subsidiaries, and dividend goals.

The Company expects capital expenditures for 2011 to be in the \$140 to \$160 million range of which approximately \$30 million will be in consolidated entities where the Company s ownership is between 50 and 100 percent. The following table summarizes long-term debt at June 30, 2011:

Parent company 8% unsecured notes due December 2019 7.625% unsecured notes due March 2027 Capitalized leases and other	\$ 173.6 116.9 9.9
Consolidated Subsidiaries	300.4
6.08% unsecured notes due in 2011	5.4
5.56% to 6.10% unsecured notes due in 2012	20.0
6.10% to 6.40% unsecured notes due in 2014	20.1
	45.5
Total debt	345.9
Less current maturities	21.5

The Company s partially owned, consolidated subsidiary operations in the PRC have short-term notes payable of \$136 million at June 30, 2011.

29

\$ 324.4

### **Table of Contents**

### **Contingencies**

The Company is a defendant in various products liability claims brought in numerous jurisdictions in which individuals seek damages resulting from automobile accidents allegedly caused by defective tires manufactured by the Company. Each of the products liability claims faced by the Company generally involve different types of tires, models and lines, different circumstances surrounding the accident such as different applications, vehicles, speeds, road conditions, weather conditions, driver error, tire repair and maintenance practices, service life conditions, as well as different jurisdictions and different injuries. In addition, in many of the Company s products liability lawsuits the plaintiff alleges that his or her harm was caused by one or more co-defendants who acted independently of the Company. Accordingly, both the claims asserted and the resolutions of those claims have an enormous amount of variability. The aggregate amount of damages asserted at any point in time is not determinable since often times when claims are filed, the plaintiffs do not specify the amount of damages. Even when there is an amount alleged, at times the amount is wildly inflated and has no rational basis.

Pursuant to applicable accounting rules, the Company accrues the minimum liability for each known claim when the estimated outcome is a range of possible loss and no one amount within that range is more likely than another. The Company uses a range of losses because an average cost would not be meaningful since the products liability claims faced by the Company are unique and widely variable, and accordingly, the resolutions of those claims have an enormous amount of variability. The costs have ranged from zero dollars to \$33 million in one case with no average that is meaningful. No specific accrual is made for individual unasserted claims or for premature claims, asserted claims where the minimum information needed to evaluate the probability of a liability is not yet known. However, an accrual for such claims based, in part, on management s expectations for future litigation activity and the settled claims history is maintained. Because of the speculative nature of litigation in the United States, the Company does not believe a meaningful aggregate range of potential loss for asserted and unasserted claims can be determined. The Company s experience has demonstrated that its estimates have been reasonably accurate and, on average, cases are resolved for amounts close to the reserves established. However, it is possible an individual claim from time to time may result in an aberration from the norm and could have a material impact.

# **Forward-Looking Statements**

This report contains what the Company believes are forward-looking statements, as that term is defined under the Private Securities Litigation Reform Act of 1995, regarding projections, expectations or matters that the Company anticipates may happen with respect to the future performance of the industries in which the Company operates, the economies of the United States and other countries, or the performance of the Company itself, which involve uncertainty and risk. Such forward-looking statements are generally, though not always, preceded by words such as anticipates, projects, intends, expects, will, should, believes, plans, estimates, and similar terms that to the future and are not merely recitations of historical fact. Such statements are made solely on the basis of the Company s current views and perceptions of future events, and there can be no assurance that such statements will prove to be true. It is possible that actual results may differ materially from those projections or expectations due to a variety of factors, including but not limited to:

changes in economic and business conditions in the world;

the failure to achieve expected sales levels;

consolidation among the Company s competitors or customers;

technology advancements;

the failure of the Company s suppliers to timely deliver products in accordance with contract specifications;

changes in interest or foreign exchange rates;

changes in the Company s customer relationships, including loss of particular business for competitive or other reasons;

the impact of reductions in the insurance program covering the principal risks to the Company, and other unanticipated events and conditions;

volatility in raw material and energy prices, including those of rubber, steel, petroleum based products and natural gas and the unavailability of such raw materials or energy sources;

the inability to obtain and maintain price increases to offset higher production or material costs;

30

### **Table of Contents**

increased competitive activity including actions by larger competitors or lower-cost producers;

the inability to recover the costs to develop and test new products or processes;

the risks associated with doing business outside of the United States;

changes in pension expense and/or funding resulting from investment performance of the Company s pension plan assets and changes in discount rate, salary increase rate, and expected return on plan assets assumptions, or changes to related accounting regulations;

government regulatory initiatives;

the impact of labor problems, including a strike brought against the Company or against one or more of its large customers or suppliers;

litigation brought against the Company including products liability;

an adverse change in the Company s credit ratings, which could increase its borrowing costs and/or hamper its access to the credit markets;

changes to the credit markets and/or access to those markets;

inaccurate assumptions used in developing the Company s strategic plan or operating plans or the inability or failure to successfully implement such plans;

inability to adequately protect the Company s intellectual property rights;

failure to successfully integrate acquisitions into operations or their related financings may impact liquidity and capital resources;

inability to use deferred tax assets;

changes to tariffs on certain tires imported into the United States from the PRC or the imposition of new tariffs or trade restrictions and:

changes in the Company s relationship with joint venture partners.

It is not possible to foresee or identify all such factors. Any forward-looking statements in this report are based on certain assumptions and analyses made by the Company in light of its experience and perception of historical trends, current conditions, expected future developments and other factors it believes are appropriate in the circumstances. Prospective investors are cautioned that any such statements are not a guarantee of future performance and actual results or developments may differ materially from those projected.

The Company makes no commitment to update any forward-looking statement included herein or to disclose any facts, events or circumstances that may affect the accuracy of any forward-looking statement.

Further information covering issues that could materially affect financial performance is contained in the Company  $\,$ s other periodic filings with the U. S. Securities and Exchange Commission ( $\,$ SEC $\,$ ).

31

### **Table of Contents**

### Item 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

There have been no material changes in market risk at June 30, 2011, from those detailed in the Company s Annual Report on Form 10-K filed with the SEC for the year ended December 31, 2010.

### **Item 4. CONTROLS AND PROCEDURES**

The Company maintains disclosure controls and procedures designed to ensure that information required to be disclosed in the reports the Company files or submits as defined in Rules 13a-15(e) of the Securities and Exchange Act of 1934, as amended ( Exchange Act ) is recorded, processed, summarized and reported within the time periods specified in the SEC rules and forms, and that such information is accumulated and communicated to the Chief Executive Officer ( CEO ) and Chief Financial Officer ( CFO ) to allow timely decisions regarding required disclosures. The Company, under the supervision and with the participation of management, including the CEO and CFO, evaluated the effectiveness of the design and operation of its disclosure controls and procedures (as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934 as of June 30, 2011 ( Evaluation Date )). Based on its initial evaluation, the Company s CEO and CFO concluded that its disclosure controls and procedures were effective as of the Evaluation Date.

There were no changes in the Company s internal control over financial reporting that occurred during the quarter ended June 30, 2011 that have materially affected, or are reasonably likely to materially affect, its internal control over financial reporting.

32

#### **Table of Contents**

# Part II. OTHER INFORMATION

**Item 1A. RISK FACTORS** 

Some of the more significant risk factors related to the Company and its subsidiaries follow:

# The Company is facing heightened risks due to the current business environment.

Current global economic conditions may affect demand for the Company s products, create volatility in raw material costs and affect the availability and cost of credit. These conditions also affect the Company s customers and suppliers as well as the ultimate consumer.

A deterioration in the global macroeconomic environment or in specific regions could impact the Company and, depending upon the severity and duration of these factors, the Company s profitability and liquidity position could be negatively impacted.

This may also be the result of increased price competition and product discounts, resulting in lower margins in the business.

# Pricing volatility for raw materials and an inadequate supply of key raw materials could result in increased costs and may affect the Company s profitability.

The pricing volatility for natural rubber, petroleum-based materials and other raw materials contributes to the difficulty in managing the costs of raw materials. Costs for certain raw materials used in the Company s operations, including natural rubber, chemicals, carbon black, steel reinforcements and synthetic rubber remain volatile. Increasing costs for raw material supplies will increase the Company s production costs and affect its margins if the Company is unable to pass the higher production costs on to its customers in the form of price increases. Further, if the Company is unable to obtain adequate supplies of raw materials in a timely manner for any reason, its operations could be interrupted.

# If the price of natural gas or other energy sources increases, the Company s operating expenses could increase significantly or the demand for the Company s products could be affected.

The Company s manufacturing facilities rely principally on natural gas, as well as electrical power and other energy sources. High demand and limited availability of natural gas and other energy sources can result in significant increases in energy costs increasing the Company s operating expenses and transportation costs. Higher energy costs would increase the Company s production costs and adversely affect its margins and results of operations. If the Company is unable to obtain adequate sources of energy, its operations could be interrupted.

Further, if the price of gasoline increases significantly for consumers, it can affect driving and purchasing habits and impact demand for tires.

# The Company s industry is highly competitive, and it may not be able to compete effectively with low-cost producers and larger competitors.

The replacement tire industry is a highly competitive, global industry. Some of the Company's competitors are larger companies with relatively greater financial resources. Most of the Company's competitors have operations in lower-cost countries. Intense competitive activity in the replacement tire industry has caused, and will continue to cause, pressures on the Company's business. The Company's ability to compete successfully will depend in part on its ability to balance capacity with demand, leverage global purchasing of raw materials, make required investments to improve productivity, eliminate redundancies and increase production at low-cost, high-quality supply sources. If the Company is unable to offset continued pressures with improved operating efficiencies, its sales, margins, operating results and market share would decline and the impact could become material on the Company's earnings.

33

# **Table of Contents**

# The Company may be unable to recover new product and process development and testing costs, which could increase the cost of operating its business.

The Company s business strategy emphasizes the development of new equipment and new products and using new technology to improve quality, performance and operating efficiency. Developing new products and technologies requires significant investment and capital expenditures, is technologically challenging and requires extensive testing and accurate anticipation of technological and market trends. If the Company fails to develop new products that are appealing to its customers, or fails to develop products on time and within budgeted amounts, the Company may be unable to recover its product development and testing costs. If the Company cannot successfully use new production or equipment methodologies it invests in, it may also not be able to recover those costs.

The Company is implementing an ERP system that will require significant amounts of capital and human resources to deploy. These requirements may exceed the Company s initial projections. If for any reason this implementation is not successful, the Company could be required to expense rather than capitalize related amounts. Throughout implementation of the system there are also risks created to the Company s ability to successfully and efficiently operate.

# The Company conducts its manufacturing, sales and distribution operations on a worldwide basis and is subject to risks associated with doing business outside the U.S.

The Company has affiliate, subsidiary and joint venture operations worldwide, including in the U.S., the U.K., Europe, Mexico and the PRC. The Company has two manufacturing entities, the Cooper Chengshan joint venture and Cooper Kunshan, in the PRC and has continued to expand operations in that country. The Company has also recently increased its investment in COOCSA, a tire manufacturing entity in Mexico. There are a number of risks in doing business abroad, including political and economic uncertainty, social unrest, shortages of trained labor and the uncertainties associated with entering into joint ventures or similar arrangements in foreign countries. These risks may impact the Company sability to expand its operations in the PRC and elsewhere and otherwise achieve its objectives relating to its foreign operations including utilizing these locations as suppliers to other markets. In addition, compliance with multiple and potentially conflicting foreign laws and regulations, import and export limitations and exchange controls is burdensome and expensive. The Company s foreign operations also subject it to the risks of international terrorism and hostilities and to foreign currency risks, including exchange rate fluctuations and limits on the repatriation of funds.

The Company s results could be impacted by tariffs imposed by the U.S. or other governments on imported tires. The Company s ability to competitively source tires can be significantly impacted by changes in tariffs imposed by various governments. Other effects, including impacts on the price of tires, responsive actions from other governments and the opportunity for other low cost competitors to establish a presence in markets where the Company participates could also have significant impacts on the Company s results.

# The Company's expenditures for pension and other postretirement obligations could be materially higher than it has predicted if its underlying assumptions prove to be incorrect.

The Company provides defined benefit and hybrid pension plan coverage to union and non-union U.S. employees and a contributory defined benefit plan in the U.K. The Company s pension expense and its required contributions to its pension plans are directly affected by the value of plan assets, the projected and actual rates of return on plan assets and the actuarial assumptions the Company uses to measure its defined benefit pension plan obligations, including the discount rate at which future projected and accumulated pension obligations are discounted to a present value and the inflation rate. The Company could experience increased pension expense due to a combination of factors, including the decreased investment performance of its pension plan assets, decreases in the discount rate and changes in its assumptions relating to the expected return on plan assets. The Company could also experience increased other postretirement expense due to decreases in the discount rate, increases in the health care trend rate and changes in the health care environment.

Table of Contents 48

34

#### **Table of Contents**

In the event of declines in the market value of the Company s pension assets or lower discount rates to measure the present value of pension and other postretirement benefit obligations, the Company could experience changes to its Consolidated Balance Sheet.

### The Company is facing risks relating to enactment of healthcare legislation.

The Company is facing risks emanating from the enactment of legislation by the U.S. government including the *Patient Protection and Affordable Care Act* and the related *Healthcare and Education Reconciliation Act* which are collectively referred to as healthcare legislation. This major legislation is being enacted over a period of several years and the ultimate cost and the potentially adverse impact to the Company and its employees cannot be quantified at this time.

# Compliance with regulatory initiatives could increase the cost of operating the Company s business.

The Company is subject to federal, state, local and foreign laws and regulations. Compliance with those laws now in effect, or that may be enacted, could require significant capital expenditures, increase the Company s production costs and affect its earnings and results of operations.

Clean oil directive number 2005/69/EC in the European Union ( EU ) was effective January 1, 2010, and requires all tires manufactured after this date and sold in the EU to use non-aromatic oils. The Company is in compliance with this directive. Additional countries may legislate similar clean oil requirements which could increase the cost of manufacturing the Company s products.

In addition, while the Company believes that its tires are free from design and manufacturing defects, it is possible that a recall of the Company s tires could occur in the future. A recall could harm the Company s reputation, operating results and financial position.

The Company is also subject to legislation governing occupational safety and health both in the U.S. and other countries. The related legislation can change over time making it more expensive for the Company to produce its products. The Company could also, despite its best efforts to comply with these laws, be found liable and be subject to additional costs because of this legislation.

# Any interruption in the Company s skilled workforce could impair its operations and harm its earnings and results of operations.

The Company s operations depend on maintaining a skilled workforce and any interruption of its workforce due to shortages of skilled technical, production and professional workers could interrupt the Company s operations and affect its operating results. Further, a significant number of the Company s U.S. and U.K. employees are currently represented by unions. The labor agreement at the Findlay, Ohio operation expires October 2011 and the labor agreement at the Texarkana, Arkansas operations expires January 2012. The labor agreement in Melksham, England expires March 2012. Although the Company believes that its relations with its employees are generally good, the Company cannot provide assurance that it will be able to successfully maintain its relations with its employees. If the Company fails to extend or renegotiate its collective bargaining agreements with the labor unions on satisfactory terms, or if its unionized employees were to engage in a strike or other work disruptions, the Company s business and operating results could suffer.

If the Company is unable to attract and retain key personnel, its business could be materially adversely affected. The Company s business depends on the continued service of key members of its management. The loss of the services of a significant number of members of its management team could have a material adverse effect on its business. The Company s future success will also depend on its ability to attract, retain and develop highly skilled personnel, such as engineering, marketing and senior management professionals. Competition for these employees is intense and the Company could experience difficulty from time to time in hiring and retaining the

Table of Contents 49

35

#### **Table of Contents**

personnel necessary to support its business. If the Company does not succeed in retaining its current employees and attracting new high quality employees, its business could be materially adversely affected.

The Company has a risk of exposure to products liability claims which, if successful, could have a negative impact on its financial position, cash flows and results of operations.

The Company s operations expose it to potential liability for personal injury or death as an alleged result of the failure of or conditions in the products that it designs, manufactures and sells. Specifically, the Company is a party to a number of products liability cases in which individuals involved in motor vehicle accidents seek damages resulting from allegedly defective tires that it manufactured. Products liability claims and lawsuits, including possible class action, may result in material losses in the future and cause the Company to incur significant litigation defense costs. Those claims could have a negative effect on the Company s financial position, cash flows and results of operations. The Company is largely self insured against these claims.

# The Company has a risk due to volatility of the capital and financial markets.

The Company periodically requires access to the capital and financial markets as a significant source of liquidity for maturing debt payments or working capital needs that it cannot satisfy by cash on hand or operating cash flows. Substantial volatility in world capital markets and the banking industry may make it difficult for the Company to access credit markets and to obtain financing or refinancing, as the case may be, on satisfactory terms or at all. In addition, various additional factors, including a deterioration of the Company s credit ratings or its business or financial condition, could further impair its access to the capital markets. See also related comments under There are risks associated with the Company s global strategy of using joint ventures and partially owned subsidiaries. Additionally, any inability to access the capital markets, including the ability to refinance existing debt when due, could require the Company to defer critical capital expenditures, reduce or not pay dividends, reduce spending in areas of strategic importance, sell important assets or, in extreme cases, seek protection from creditors.

If assumptions used in developing the Company's strategic plan are inaccurate or the Company is unable to execute its strategic plan effectively, its profitability and financial position could be negatively impacted.

In February 2008, the Company announced its strategic plan which contains three imperatives:

Build a sustainable, competitive cost position,

Drive profitable top line growth, and

Build bold organizational capabilities and enablers to support strategic goals.

If the assumptions used in developing the strategic plan vary significantly from actual conditions, the Company s sales, margins and profitability could be harmed. If the Company is unsuccessful in implementing the tactics necessary to execute its strategic plan it can also be negatively impacted.

# The Company may not be able to protect its intellectual property rights adequately.

The Company s success depends in part upon its ability to use and protect its proprietary technology and other intellectual property, which generally covers various aspects in the design and manufacture of its products and processes. The Company owns and uses tradenames and trademarks worldwide. The Company relies upon a combination of trade secrets, confidentiality policies, nondisclosure and other contractual arrangements and patent, copyright and trademark laws to protect its intellectual property rights. The steps the Company takes in this regard may not be adequate to prevent or deter challenges, reverse engineering or infringement or other violations of its intellectual property, and the Company may not be able to detect unauthorized use or take appropriate and timely steps to enforce its intellectual property rights. In addition, the laws of some countries may not protect and enforce the Company s intellectual property rights to the same extent as the laws of the U.S.

36

### **Table of Contents**

# The Company may not be successful in executing and integrating acquisitions into its operations, which could harm its results of operations and financial condition.

The Company routinely evaluates potential acquisitions and may pursue acquisition opportunities, some of which could be material to its business. The Company cannot provide assurance whether it will be successful in pursuing any acquisition opportunities or what the consequences of any acquisition would be. Additionally, in any future acquisitions, the Company may encounter various risks, including:

the possible inability to integrate an acquired business into its operations;

diversion of management s attention;

loss of key management personnel;

unanticipated problems or liabilities; and

increased labor and regulatory compliance costs of acquired businesses.

Some or all of those risks could impair the Company s results of operations and impact its financial condition. The Company may finance any future acquisitions from internally generated funds, bank borrowings, public offerings or private placements of equity or debt securities, or a combination of the foregoing. Future acquisitions may involve the expenditure of significant funds and management time. Future acquisitions may also require the Company to increase its borrowings under its bank credit facilities or other debt instruments, or to seek new sources of liquidity. Increased borrowings would correspondingly increase the Company s financial leverage, and could result in lower credit ratings and increased future borrowing costs. These risks could also reduce the Company s flexibility to respond to changes in its industry or in general economic conditions.

# The Company is required to comply with environmental laws and regulations that could cause it to incur significant costs.

The Company s manufacturing facilities are subject to numerous laws and regulations designed to protect the environment, and the Company expects that additional requirements with respect to environmental matters will be imposed on it in the future. Material future expenditures may be necessary if compliance standards change or material unknown conditions that require remediation are discovered. If the Company fails to comply with present and future environmental laws and regulations, it could be subject to future liabilities or the suspension of production, which could harm its business or results of operations. Environmental laws could also restrict the Company s ability to expand its facilities or could require it to acquire costly equipment or to incur other significant expenses in connection with its manufacturing processes.

# The realizability of deferred tax assets may affect the Company s profitability and cash flows.

The Company maintains a valuation allowance pursuant to ASC 740, Accounting for Income Taxes, on its net U.S. deferred tax asset position. The valuation allowance will be maintained as long as it is more likely than not that some portion of the deferred tax asset may not be realized. Deferred tax assets and liabilities are determined separately for each taxing jurisdiction in which the Company conducts its operations or otherwise generates taxable income or losses. In the U.S., the Company has recorded significant deferred tax assets, the largest of which relate to products liability, pension and other postretirement benefit obligations. These deferred tax assets are partially offset by deferred tax liabilities, the most significant of which relates to accelerated depreciation. Based upon this assessment, the Company maintains a valuation allowance for the portion of U.S. deferred tax assets exceeding its U.S. deferred tax liabilities. In addition, the Company has recorded valuation allowances for deferred tax assets associated with losses in certain foreign jurisdictions.

# The impact of proposed new accounting standards may have a negative impact on the Company's financial statements.

The Financial Accounting Standards Board is considering several projects which may result in the modification of accounting standards affecting the Company, including standards relating to revenue recognition, financial instruments, leasing, and others. Any such changes could have a negative impact on the Company s financial statements.

# There are risks associated with the Company's global strategy of using joint ventures and partially owned subsidiaries.

The Company s strategy includes expanding its global footprint through the use of joint ventures and other partially owned subsidiaries. These entities operate in countries outside of the U.S., are generally less well capitalized than the Company and bear risks similar to the risks of the Company. However, there are specific additional risks applicable to these subsidiaries and these risks, in turn, add potential risks to the Company. Such risks include: greater risk of sudden changes in laws and regulations which could impact their competitiveness, risk of joint venture partners or other investors failing to meet their obligations under related shareholders—agreements and risk of being denied access to the capital markets which could lead to resource demands on the Company in order to maintain or advance its strategy. The Company—s outstanding notes and primary credit facility contain cross default provisions in the event of certain defaults by the Company under other agreements with third parties. For further discussion of access to the capital markets, see also related comments under—The Company has a risk due to volatility of the capital and financial markets.

The affiliated operations in the PRC have been financed in part using multiple loans from several lenders to finance facility construction, expansions and working capital needs. These loans are generally for terms of three years or less. Therefore, debt maturities occur frequently and access to the capital markets is crucial to their ability to maintain sufficient liquidity to support their operations.

In connection with its acquisition of a controlling interest in Cooper Chengshan, beginning January 1, 2009, and continuing through December 31, 2011, the noncontrolling shareholders have the right to sell and, if exercised, the Company has the obligation to purchase, the original 49 percent at a minimum price of \$63 million. In 2009, the Company received notification from one of its noncontrolling shareholders of its intention to exercise its put option and after receiving governmental approvals, the Company purchased the 14 percent share for \$18 million on March 31, 2010. The remaining shares may be sold to the Company under the put option through December 31, 2011.
